OUTPUTS

FIRE BEHAVIOR

GENERAL:

The hard work by the crews continue to diminish the chances of the Lime Fire moving from its current perimeter every day. The recon flight yesterday afternoon showed very little heat on any of the divisions even with direct sunlight and warmer temperatures. The Kidder 2 Fire continues to consume the heavier fuels as it backs down the rocky ridge towards the natural slide barrier to the south and the no-name drainage to the east. There is a chance of a strong southwest wind at the end of the weekend with the incoming low pressure.

SPECIFIC:

- **Div. A-** After several days of having the edge lined and limited smoke, this division should be quiet. Use the night IR flight data to ensure none of the heat signatures have potential to threaten the line.
- Div. D- This division looks excellent. Mitigate any of the heavier fuels which have roll-out potential.
- **Div. W-** This area is going to be tested by the winds when they turn out of the Southwest on Sunday. Use the night IR flight data to ensure the heat signatures won't threaten the line especially on the two unburned fingers.
- Div. Z- There still may be some burning material up in Lime and/or Brushy Gulch holding heat which may show themselves with several days of drying. However, these areas should be well surrounded by black and pose limited concern to the fire line.
- **Div. K & Div. S-** There will continue to be roll-out potential in Div. K on the very steep slopes. Make sure to flag any areas which rolled-out so they can be checked for heat in the future. Div. S will continue to have heat along the southern edge until it gets out of the timber stringer and reaches the natural barriers to the Southwest. The Southwest corner is a weak point with its continuous fuels and the forecasted winds on Sunday. Prepare accordingly.

AIR OPERATIONS:

Over communicate with aircraft if/when the Unmanned Aerial System (UAS) is working in your division.

SAFETY

Always think about the "what if" scenario and have a plan for even the rare events.

INCIDENT SAFETY ANALYSIS 215A

CA-KNF-007074 - Friday, September 13, 2019 0600-1800

8. Location	9. Hazard	6. Control or Abatement Action (Engineering, Administrative, PPE Avoidance, Education, etc)
All	Driving & Traffic	~ Practice "Defensive Driving" techniques traveling on all roads and city streets. Use spotters when backing. Watch for logging trucks. Follow Driving LCES (Lights, Chock blocks, Emergency brake, Seat belts). Stay on Highways 5, 96 and 3 when driving to incidents. Use the 3 second rule for following distance when driving. Use extra caution when turning onto Hwy 96 from Lime Gulch Rd. Ensure that windshields are kept clean of dust and bugs.
All	Hazard Trees	 Follow "Hazard Tree Safety" guidelines, IRPG page 22. Post lookouts, or use a spotter in mop-up areas with personnel. Establish trigger points for disengagement during high wind events. Remember that the hazard zone extends a minimum of 2 1/2 tree heights.
All	Steep Terrain & Rolling Debris	 Maintain 8'-10' spacing when working & walking. Don't work above any personnel. Be on the lookout for rolling rocks, debris, or burning material. Post lookouts (IRPG pg 6).
All	Air Operations	 Follow " Aviation Watch-Out Situations" on page 46, IRPG. Don't plan on air resources for medical transport or resupply. Refer to page 57, IRPG for directing bucket drops. Ensure positive communication with all air resources.
All	Heavy Equipment Operations	 Ensure communications are established with operators. Use hand signals if other communications are unavailable. Maintain a 50'-100' exclusion area around equipment and increase it to 1 1/2 times tree height when in timber. Avoid working below heavy equipment.
All	Helicopter Operations	 Stay clear of all bucket drops when suppression actions are in place and allow 1 minut prior to re-entry. Monitor Air to Ground communications. Follow aviation safety guidelines in IRPG 57 and IHOG.
All	Мор ир	 Use extreme caution when working around hot ash pits, wear all PPE. Be aware of all snags that may be in the area you are mopping up. Use a lookout while mopping up on steep slopes for rolling material or rocks.
All	Indirect Fireline	~ Post lookouts, identify escape routes and safety zones (IRPG pg. 7). ~ Review "Strategy/Indirect Attack" (IRPG pg. 83).
All	Injury & Medical Emergency	 ∼ Assist injured employee with appropriate medical care. Use Medical Incident Report. ∼ Use EMT's on Division for initial care. ∼ Follow medical protocol as outlined in ICS-206 & IRPG Pgs 105-119
All	Fatigue & Over Exertion	 Drink 1 quart of water each hour during and after work. Set a reasonable work pace and allow adequate rest breaks while on the project. Use buddy system to monitor personnel of heat related and fatigue issues. Follow work / rest guidelines.
All	Wildlife & Livestock	∼ Watch out for wildlife inside fire area and roadways. Bears, bees & mountain lions. ∼ Clean up all debris and trash during each operational period.
All	Communications	 Maintain communication with aviation resources and suppression organization. Ensure all know frequency and protocol for contacting resources. Know and utilize the ICS 205 and ensure clear communications. Utilize human repeaters when working in dead spots.
All	Poisonous Plants	 Identify and avoid hazard areas. Poison oak in fire areas. Launder clothing. Use Tecnu Extreme or Zanfel soap for contaminated skin. Shower frequently. Do not wear containinated yellow fire shirts in chow areas.
All	Abandoned Mines	 Keep an eye open to the possibility of abandoned mines in the area of the Lime Fire. If you locate one, flag it's location and inform others in your work area. GPS mine.
