WEATHER SUMMARY: **Please see attached Fire Weather Forecast**

Today: Active weather for the next operational period for both fires. An early fall cold front will sweep through the region Sunday evening and Sunday night bringing gusty winds and periods of rain. Kidder 2 should be heads up for gusty and erratic winds as they spill off the ridgetops. Winds will increase late in the morning and peak Sunday afternoon/evening. Rain chances will increase late Sunday afternoon becoming more likely by Sunday evening.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

The timing of the weather events today will have a big impact on the fire behavior within the Kidder 2 fire. The strong winds ahead of this front have been well forecasted and no one should be surprised by their arrival. The Kidder 2 fire has a heavy component of large punky fuels which are receptive to spots from embers after several hot and dry days. Expect more spots today in the afternoon. Keep in mind where the fire is located in relation to values at risk and the expected transition to wet/cool conditions.

SPECIFIC:

Lime Fire- There has been very few smokes located on the Lime fire for several days and this isn't expected to change. Ensure good accountability of your resources and that they are monitoring the correct frequencies. Today will be a dynamic weather day and it will be important to communicate with the resources in a timely matter due to changing weather.

Div. K- This is a tough piece of ground as both slopes dive off steep from the ridgetop. Expect to take the brunt of the afternoon winds and the fact that there will most likely be spots outside of the current perimeter. Although there may be a larger area to patrol after the weather event, the broken ground doesn't support the fire from making large runs.

Div. S- The timing and strength of the winds are hard to predict because of how they eddy off the predominant ridge system and make their way down towards Sling 32. There will be more torching today in the timber stringers on the southern perimeter, but there are several scabby areas which will help keep the fire from making any significant lateral runs.

AIR OPERATIONS:

Never base the success of your operation on aircraft support. Remember any medical emergency may have to rely strictly on ground transport with the anticipated strong afternoon winds.

SAFETY

Limit crew exposure under the timber during periods of high winds.

HEALTH AND SAFETY MESSAGE

Safety First, Last and Always!

INCIDENT: LIME & KIDDER 2 FIRES

DATE: September 15, 2019 0600-1800

Major Hazards and Risks:

- **Driving and vehicle operations on all roads to and from the fire area**
- **Fire weakened trees, Hazard trees and green trees**
- **Rolling material and rocks**
- **Hiking in rough, extremely steep terrain**
- **Firefighter fatigue and dehydration**
- **Working around heavy equipment**

Narrative:

Many of you are timing out and thinking about heading home. That's a good thing...but don't let those thoughts keep you from thinking about your safety and the safety of those people around you. So if you are heading to demob and get all your paperwork processed, don't forget about giving your vehicle some attention. Check your tires for cuts and tire pressure, clean your windshield, check all your lights, clean out your vehicle of trash and stuff that accumulates on an incident. Get your head and vehicle in a good place for a safe trip home or next assignment.

Wait just a minute!

- Walk around the vehicle.
- Check the windshield, wipers, and wiper fluid level.
- Keep windows, mirrors, and lights clean to better see and be seen.
- Check headlights, turn signals, tail lights, reflectors and running lights.
- Clean and adjust mirrors.
- Check front and back tires (including wheels and lug nuts).
- Under the hood, check all fluid levels and especially the Air Filter.
- Drivers to be rested up prior to driving.
- If tired and by yourself, take a safety nap.

Defensive Driving

- Slow down and keep an eye out for wildlife, civilians, and debris on the roadway.
- Expect the unexpected around every curve.
- Always fasten seatbelts before the vehicle is set in motion.
- Stay as far right on the road as is safely possible.
- Stay away from soft shoulders.
- Wheels may sink into these areas causing the driver to lose control of the vehicle.
- Increase following distance between vehicles in dusty or smoky areas to maintain visibility.
- Use a spotter when backing or turning around your vehicle. Do a walk around if a spotter is not available.
- Allow opposing heavy vehicle traffic to pass slowly on the uphill side of narrow access roads, after ensuring there is adequate room.

Appendix A

Effective Waterbars

When locating and building water bars, place them the right **distance** apart, at a **diagonal** to the fireline, so that they **divert**, then **discharge**, then **dissipate** the energy of the flowing water. Be sure to make them deep enough so they'll be durable, and that soil does not **block** the water bar outlet.

Recommended spacing for waterbars on firelines.

Fireline slope %	Maximum Distance Apart (feet)
1-5	200
6-20	125
21-40	60
41-60	40
>60	25

Waterbars should be at least 2 pulaski (4-6 inches) widths wide and 12-24 inches high for handlines.

EEO

Equal Employment Opportunity

EEO is a product of Title VII of the Civil Rights Act of 1964

This is an abbreviation of prohibited discrimination identified within these categories.

The original laws protect individuals by prohibiting discrimination on the basis of race, color (including personal characteristics such as hair, skin color or certain facial features, accent, etc), national origin (from a particular country or part of the world), sex (because you're a male or female including LGBTQ-case law determined this is sex and included . . . in this category), religion (protects your religious, ethical or moral beliefs).

These came along later-

Age - (40+ yrs old) age related bias 1967 & 1975
