INCIDENT Weather Forecast

FORECAST NO: 8 NAME OF FIRE: Walker Fire

PREDICTION FOR: Wednesday Day SHIFT UNIT: Plumas NF

SHIFT DATE: Sept 11, 2019 SIGNED: Mike Smith *Mike Smith*

TIME AND DATE FORECAST ISSUED: 2100 Sept 10, 2019 Incident Meteorologist

WEATHER DISCUSSION: The low pressure system that brought the showers to the fire Tuesday has now moved east of the region. Today will be a transition day and skies should be mainly clear as high pressure begins to build over the west coast. Cold overnight temperatures and surface moisture will likely bring areas of morning fog or low clouds, however. Significant warming and drying can be expected later today and winds will be from the less common northerly direction over the ridges. Warm dry conditions continue on Thursday as high pressure builds over the state with a return to the more normal southwest ridge winds in the afternoon. Conditions level off by the end of the week preceding the possible approach of a stronger weather system expected to move through the region early next week. Strong southwest winds are indicated this Sunday.

WEATHER FORECAST:

WEATHER: Areas of morning fog and low clouds, otherwise mostly sunny.

TEMPERATURES: Warmer with highs 70-76.

HUMIDITY: Min RH 20-26%.

20 FT WINDS:

RIDGETOP - Variable to 4 mph through about noon becoming northwest to northeast 3-8 mph gusts to 15 mph in the afternoon.

SLOPE/VALLEY - Downslope to 4 mph becoming upslope/upcanyon 4-8 gusts to 12 mph in the afternoon.

HAINES INDEX: 2

STABILITY/INVERSION: Inversions breaking by around noon under stable conditions.

OUTLOOK FOR Wednesday Night: Fair skies. Minimum temperatures upper 30s canyons to upper 40s ridgetops. Max RH recovery 60-70%. Ridge winds switching to southeast 3 to 8 mph. Slope winds becoming downslope to 4 mph after about 2000.

WEATHER SUMMARY

See Fire Weather Forecast

Weather: Partly cloudy in the morning, clearing by mid-day..
Day Temps: Warmer, 70 – 76 degrees
Day RH: Min RH 20-26%
20 FOOT WINDS: **Ridges:** Variable to 4 mph through about noon becoming northwest to northeast 3-8 mph gusts to 15 mph in the afternoon.
Slope/valley: Downslope to 4 mph becoming upslope/upcanyon 4-8 gusts to 12 mph in the afternoon.

FIRE BEHAVIOR

INPUTS:

- **Fuels:** Showers yesterday have increased fuel and soil moisture. Fuel availability will be reduced until drying occurs.
- **Topography:** Locations on the north end of the fire, especially in the Wheeler Fire 2007, received more precipitation than southern areas, no recent fire history. Sheltered timber areas on the East and South sides will see movement today with lower humidity values.

FIRE BEHAVIOR: Expect an increase in fire behavior today. Humidity levels will reach levels capable of supporting torching and spotting. Timbered locations will see the greatest fire behavior as moisture impacts were reduced by canopy cover.

Probability of Ignition: 70%

DIV A/C/E: Burn operations in the Wheeler scar will be hampered by increased fuel moisture. Areas on Wheeler Mtn. with heavier timber could see movement by end of shift. Burn through on snags is approaching the 72 to 96 hour time frame, and snag fall will represent hazard.

DIV F/G: Less precipitation and heavier canopies around Mt. Ingalls will contribute to favorable surface fire conditions. Light north wind component will move embers across lines but fire behavior should be within suppression capability.

DIV I/K: Reduced moisture on the southeast side of the fire, Clover, Railroad and Beaver Dips coupled with continuous stringers of moderate timber fuels will create moderate burning conditions. Fire will move through surface fuel with possible torching later in the day. Clover Creek does present a possible wind/drainage alignment scenario.

DIV M/Q: Conditions on Round Mtn., 'The Horn' will be favorable for direct suppression and mop-up. Snag fall remains a hazard. Burning opportunities in the Wheeler scar may not present themselves today.

DIV V/X: Fire movement will be minimal today except in pockets of heavy down material. Burning opportunities in the Wheeler scar may not present themselves today. Any direct suppression efforts should account for snag fall in a risk assessment.

AIR OPERATIONS

Light winds from the north should allow for air operation after fog burns off in the morning.

SAFETY

** Fire killed trees impacted by fire are exhibiting a 72 to 96 hour burn through.
Account for fire weakened snags in risk analysis**

Walker Fire– Safety Message

INCIDENT #CA-PNF-001324

DATE: 09/11/2019 TIME: 0600-1800 Day Shift

Situational Awareness

In the wildland fire environment, "SA" is requirement!

- Driving: Maintain safe driving practices
- Trees: Gravity always wins. Look up, down and around
- Steep Terrain: Look for rolling material
- Fatigue: Monitor your health and that of those around you
- Concentrate: Stay focused on the task at hand
- Communications: Be clear, be concise, be accurate

Any Firefighter knows how Every firefighter should know why

Points to Ponder

- Vehicle accidents are a common cause of firefighter injuries – **Drive Smart**
- Wildland FF's are injured or killed more annually from falling trees – **Look Up**
- Ash pits and stump holes are the most common cause of burn injuries – **Look Down**
- FF's can be the cause of, or recipient of rolling debris – **Look Around**
- Heat, long hours, and repetition can lead to complacency and injuries – **Pace yourself**
- Multiple Resources of multiple typing doing multiple jobs = Multiple potential for injury – **Stay Focused**
- Communicate clearly and get confirmation that your message is understood – **Communicate Clearly**

Statistics

- NFPA estimates 65,880 FF injuries occurred in the line of duty in 2017
- An estimated 45% of those injuries occurred during fire-ground operations
- The leading injuries during fire-ground operations involved injuries such as sprains, strains, and muscular pain attributed to fatigue
- An estimated 19% of those injuries involved loss of work
- Injuries are more prevalent between the hours of 2:00 and 5:00 PM

INCIDENT RISK ANALYSIS

(ICS 215a) Day Shift

BR/ DIV	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL	DRIVING	<ul style="list-style-type: none"> • Use caution while driving on all incident roads. Non fire personnel speeds in the area are often faster than we normally drive. • Dirt roads may be slippery when wet. Watch out for possible stream debris from the rain. • Watch out for wildlife on all roads, especially during the dawn and dusk hours. • Drive defensively! Expect the unexpected around every curve. • Drive with headlights on; use chock blocks, keep windshields clean; use backers • Watch for other vehicles, debris, and wildlife on the roads. • Use caution on area roads. The roads are very narrow with steep drop-offs.
ALL	COMMUNICATIONS	<ul style="list-style-type: none"> • Share your Situational Awareness (hazards, changes, etc.) to those who also have a need • Radio Communications may be poor in some areas: use human repeaters as needed • Ensure all personnel are familiar with the incident and IA communications plans • Make sure all resources have radios cloned appropriately • Ensure that non-agency resources understand radio use and procedures
ALL	HAZARD / DANGER TREES	<ul style="list-style-type: none"> • Refer to Hazard Tree Safety Guidelines (IRPG p.22-23). • Limit number of personnel around snags and their exposure time; fallers must be qualified for the trees being felled • Be especially alert around snags during wind events. Large green trees can also be dangerous
ALL	LINE CONSTRUCTION	<ul style="list-style-type: none"> • Conduct thorough briefing for all personnel involved (inside rear cover IRPG). • Ensure LCES in place prior to engagement (IRPG p. 6). • Establish adequate safety zones (IRPG p.7) and escape routes. • Use Downhill Line Checklist (IRPG p. 8). • Use "Look Up, Look Down, Look Around" procedures (IRPG p. 2-3) • Utilize Risk Management Process (IRPG p.1).
ALL	HEAVY EQUIPMENT OPERATIONS	<ul style="list-style-type: none"> • NEVER work below heavy equipment • Ensure communications are established with operators • Ensure ground personnel have safety illumination, with light-sticks being the minimum • Maintain a 50'-100' exclusion area around equipment • In timber increase safety distance to 2 ½ times canopy height

STANDARD OPERATING PROCEDURES—FINANCE SECTION

WORK REST CYCLE

IT IS NATIONAL DIRECTION TO MEET 2 TO 1 WORK/REST RATIO (1 hour of sleep/rest for every 2 hours of work). Every effort shall be made to manage work hours so you don't exceed the maximum of 16 hrs. Work hours exceeding 16 hours shall be approved by your supervisor in advance, and a justification/mitigation form completed for review by Section Chief & approved by IC. It is each person's responsibility to comply with this direction to manage for fatigue and safety.

OPERATIONAL SHIFTS

Pay status for assigned overhead and crews on the fire-line will not start prior to the posted briefing time and will terminate on arrival back in camp (except for debriefing—additional hours may be accrued by those required to attend debriefing). Supervisors will be allowed ½ hour prior to briefing and after return to camp to ready crew and equipment.

DUTY STATUS

Division/Group supervisors and Unit Leaders are responsible for establishing on and off duty status. The objective is a 2 to 1 work/rest ratio. Personnel will normally work, travel, and/or be placed on ORDERED standby 8 to 16 hours per day and be off duty 8 hours or more (breaks count towards 8 hrs). Off duty time will be in a non-pay status. Each federal employee is guaranteed **at least 8 hours** of pay status each 24-hour period (midnight to midnight) unless it is the first or last day of an assignment or stated otherwise in a contract or agreement.

PERSONNEL/EQUIPMENT TIME REPORTING

Personnel time will be reported to the Time Unit and daily once they are signed by the next level supervisor. OES resources will be monitored by OES Agency Rep (if assigned) for 2/1 Work Rest compliance. Situations entitling you to HAZARD PAY are to be noted in remarks (ie. HP=Uncontrolled Fireline, hovering hookups, low level flights, etc.)

Private Contracted Equipment time must be tracked on a Shift Ticket daily and hours on shift noted even if it is a daily rate. When swapping out operators you need to notify Finance as well as changing from single to double shift and vice versa.

Supervisor's - If you are responsible for daily tracking of equipment or personnel, please ensure you understand the agreement, and follow the rules provided in this document. Do not sign documents for resources you did not manage unless you have knowledge of their assignment hours.

MEAL AND OTHER WORK BREAKS

Compensable meal periods are the exception, not the rule (5 CFR 551.411 © and 29 CFR 785.19(a)). Until the fire is controlled, personnel on the fire-line MAY BE compensated for meal periods if all of the following conditions are met: 1) The fire is not controlled and 2) The Operations Section Chief makes a decision that it is critical to the effort of controlling the fire that personnel remain at their post of duty and continue to work as they eat, and 3) The compensable meal break is approved by the supervisor at the next level and documented on CTR. For personnel in support positions, and fire-line personnel after control of a fire, a meal period of at least 30 minutes must be ordered and taken for each work shift of eight hours or more. In those situations where personnel cannot be relieved from work and must remain at a post of duty, a meal period may be counted as time worked, which will be compensable. **If breaks are NOT able to be taken, CTR should have a statement in remarks explaining the situation.**
