WEATHER SUMMARY

****Review Incident Weather Forecast****

Weather: Mostly cloudy with rain showers likely by mid morning
Day Temps: 52-57 degrees
Day RH: 55-65%

20 FOOT WINDS: Ridges: SW 10-15 mph gust to 30mph decreasing in the afternoon.

FIRE BEHAVIOR

INPUTS:

- **Fuels:** Fuel moistures will increase over time with the forecasted wetting rains.
- **Topography:** Soft shoulders will form as roads erode during the wet weather. Boulders and fire stressed trees can become dislodged and roll downhill bringing additional debris with them.
- **Weather:** Be aware of hazards associated with wet weather (decreased visibility, slick surfaces, dangerous driving conditions etc.). If thunderstorms produce any lightning ground strikes, there will be a potential for holdovers.

FIRE BEHAVIOR: Fire behavior will consist of creeping in sheltered fuels and large down and dead fuel.

Day/Night DIV A: Expect a decrease in fire activity as the area receives a wetting rain, cooler temps and the wind moderates. Sheltered fuels may smolder and creep.

Day/Night DIV C/E: Expect a decrease in fire activity as the area receives a wetting rain, cooler temps and the wind moderates. Sheltered fuels may smolder and creep.

Day/Night DIV F/G: Expect a decrease in fire activity as the area receives a wetting rain, cooler temps and the wind moderates. Sheltered fuels may smolder and creep.

Day/Night DIV I/K/M: Expect a decrease in fire activity as the area receives a wetting rain, cooler temps and the wind moderates. Sheltered fuels may smolder and creep.

Day/Night DIV Q/V/X: Expect a decrease in fire activity as the area receives a wetting rain, cooler temps and the wind moderates. Sheltered fuels may smolder and creep.

Walker Fire – Safety Message

INCIDENT # CA-PNF-001324

DATE: 09-16/17-2019 TIME: 0600-0600 24 Hour Shift

RAIN EVENT

Crew leaders should know and apply measures to enhance safety during rain events. The basic measures include:

- Seek shelter in vehicle during rain. Park away from hill sides where unstable soil caused by the fire may come down
- Stay away from areas that may be prone to funneling water such as drainages
- Reduce speeds and increase braking distances if driving, be cautious of slick road conditions
- Ensure windshield wipers are functioning properly, headlights are on for your visibility and others
- Keep a safe distance from hazardous trees
- Stay dry; seek shelter, find cover in your tent or building at base camp, or inside your vehicle
- Winds at higher elevations are predicted to reach 30 mph early in the shift, increasing the threat of aerial hazards

RISK OF HYPOTHERMIA

- The condition of having an abnormally low core body temperature
- Occurs with core body temperature below 95 degrees
- Symptoms:
 - Shivering slow shallow breath, slow weak pulse
 - Altered level of consciousness, drowsiness and slurred speech
- Mitigations:
 - Remove wet clothing, protect against wind
 - Move to a warm dry shelter, begin gentle rewarming
 - Offer warm liquids only if conscience and alert
 - SEEK MEDICAL ATTENTION!

HUMAN FACTOR BARRIERS TO SITUATIONAL AWARENESS

- Fatigue
 - Carbon Monoxide
 - Dehydration
 - Heat Stress
 - Fitness Level
 - 24-hrs awake affects your decision making like 0.1 blood alcohol content
- Hazardous Attitude
 - Invulnerability
 - Anti-Authority
 - Impulsive
 - Over confident
 - Complacent
 - Resigned
 - Afraid to speak up, or disagree

THE DRIVE HOME

- Cumulative fatigue is a reality, many resources have been here since it first started
- Don't be in a hurry, follow posted speed limit signs and slow down when road conditions warrant
- Take breaks as needed / manage fatigue
- All personnel in the vehicle MUST wear seatbelts
- Use safe following distances
- Ensure all headlights, brake lights, turn signals, and windshield wipers are operating correctly
- The assignment isn't concluded until you're home, safe!

Team 4 Safety Group

INCIDENT RISK ANALYSIS

(ICS 215a) 24 Hour Shift

| BR/ DIV | HAZARDOUS ACTIONS / CONDITIONS | MITIGATIONS / WARNINGS / REMEDIES |
|---------|----------------------------------|---|
| ALL | HAZARD / DANGER TREES | <ul style="list-style-type: none"> • Refer to Hazard Tree Safety Guidelines (IRPG p.22-23) • Limit number of personnel around snags and their exposure time; fallers must be qualified for the trees being felled • Be especially alert around snags and green trees during wind events. |
| ALL | WEATHER | <ul style="list-style-type: none"> • "Keep informed on fire weather conditions and forecasts." • Anticipate increasing and gusty winds. • Expect increased fire behavior, including spotting. • Communicate any increase in windspeed and direction. • Be especially alert around snags during wind events. |
| ALL | MOP UP OPERATIONS | <ul style="list-style-type: none"> • Evaluate areas for hazard trees and locate stump holes for avoidance • Monitor fatigue, shorten shifts to increase rest where appropriate • Provide motivation to workers to maintain situational awareness and avoid complacency • Evaluate mop up distances against what is safe and necessary • Review and follow "Look Up, Look Down, Look Around" • Balance the risk of exposure to hazards against the Mop Up objective |
| ALL | COMMUNICATIONS | <ul style="list-style-type: none"> • Share Situational Awareness (hazards, changes, etc.) to those who also have a need • Radio Communications may be poor in some areas: use human repeaters as needed • Ensure all personnel are familiar with the incident and IA communications plans • Make sure all resources have radios cloned appropriately • Ensure that non-agency resources understand radio use and procedures |
| ALL | DRIVING | <ul style="list-style-type: none"> • Use caution while driving on all incident roads. Non fire personnel speeds in the area are often faster than we normally drive • Dirt roads may be slippery when wet. Watch out for possible stream debris from the rain • Watch out for wildlife on all roads, especially during the dawn and dusk hours • Drive defensively! Expect the unexpected around every curve • Drive with headlights on; use chock blocks, keep windshields clean; use backers • Watch for other vehicles, debris, and wildlife on the roads • Use caution on area roads. The roads are very narrow with steep drop-offs |
| ALL | STEEP TERRAIN & ROLLING MATERIAL | <ul style="list-style-type: none"> • Avoid working below crews and equipment • Concentrate on your footing placement; take your time • Ensure adequate spacing between crewmembers so they can react to dislodged debris • Post lookouts to warn of rolling debris. SHOUT out to warn others • Look Up, Down and Around |
| ALL | CAMP CRUD | <ul style="list-style-type: none"> • See the Medical Unit at the onset of signs/symptoms • Take vitamins, drink lots of water and juice • Eat balanced meals • Get as much rest as possible • Use hand sanitizers, and take precautions when using "common use" areas |
| ALL | FATIGUE & COMPLACENCY | <ul style="list-style-type: none"> • Be alert for signs of fatigue and take breaks as necessary. • Maintain 2:1 work/rest ratio. • Monitor ALL resources for level of fatigue. • Recognize the symptoms of fatigue and take action as necessary to provide rest and recovery. • Repeated assignments in the same area can lead to complacency making personnel more vulnerable to accidents. • Take steps (switching of assignments, training opportunities during slow periods, etc.) to maintain situational awareness for the duration of the incident |
| ALL | HEAVY EQUIPMENT OPERATIONS | <ul style="list-style-type: none"> • NEVER work below heavy equipment • Ensure communications are established with operators • Ensure ground personnel have safety illumination, with light-sticks being the minimum • Maintain a 50'-100' exclusion area around equipment • In timber increase safety distance to 2 ½ times canopy height |
| ALL | LINE CONSTRUCTION | <ul style="list-style-type: none"> • Conduct thorough briefing for all personnel involved (inside rear cover IRPG). • Ensure LCES in place prior to engagement (IRPG p. 7) • Establish adequate safety zones (IRPG p.7) and escape routes • Use Downhill Line Checklist (IRPG p. 8) • Use "Look Up, Look Down, Look Around" procedures (IRPG p. 3-4) • Utilize Risk Management Process (IRPG p.1) |
| ALL | BEARS | <ul style="list-style-type: none"> • Pick up and remove all trash from fire line, return to camp & place in dumpsters. • Do not store any food in tents, back of trucks or inside you vehicle. • Don't domesticate the bears! |

ATTITUDE

There are a lot of choices that we don't get to make, like how tall we are, what color our eyes are, what assignment we're given and what time we have to report to that assignment.

The one thing each one of us do have a choice of and control over in is our attitude. We have choice every day regarding the attitude we will embrace for that day.

So make it your intent to assume a positive attitude even in adversity. It will allow you to deal with those adversities and to move past them quicker.

There are certain things we don't have control over but we do have control over our own attitude in all our interactions.

Summary of Suppression Damage Repair Guidelines

Objectives - The objective of the fire suppression is to repair areas disturbed by fire suppression activities into a condition that does not negatively affect natural and cultural resources and will not create to excessive erosion on the landscape. Without compromising public and firefighter safety.

- Reduce the potential for soil erosion and sedimentation
- Reduce the visual impacts of fire line as well other suppression activities when feasible
- Repair roads and drainage structures to a functioning condition
- Protect natural and cultural resources from additional potential damage

Critical Guidelines

Sensitive Sites are marked with yellow and black or red and black striped flagging.

Back-hauled all trash and un-needed flagging. Please leave safety flagging in place.

On Firelines, waterbars should be installed as described below, fire line covered with slash, and entrances blocked.

Dozer Line

| Fire line Gradient (% slope) | Distance Between Waterbars (A) (feet) |
|---------------------------------|--|
| 0 to 10 | No waterbars needed |
| 10 to 20 | 100 |
| 21 to 40 | 75 |
| 41 to 60 (B) | 50 (B) |

- (A) These are guidelines and are not intended to restrict the implementation of more or less water bars if the need or lack of need is justified.

(B) Firefighter safety should be taken into account; if slopes are too steep for safe implementation then waterbars should not be constructed, if sensitive resources are not present.

- **DEPTH AND WIDTH:** Waterbars need to be cut into surface, do not simply push up soil.
 - Waterbar depths for **dozer lines** should be at least 6 inches; total height from bottom of ditch to the top of the waterbar should average at least 18 inches and not exceed 24 inches.
 - Waterbar depths for **hand lines** should be at least 4 inches; total height from bottom of ditch to top of waterbar should average at least 8 inches and not exceed 12 inches.

Helispots, Safety Zone, Spike Camp, and Staging Areas: These fire suppression activity areas should be repaired to standards similar to fire line repair. Waterbars place where appropriate. Use cleared vegetative material, and slash for soil cover

Watercourses: Remove deposited soil from streams, watercourses, swales, or draws back to the original contour. Remove only as much as feasible without further damage to the watercourse. Restore bank channels at fire line crossings back to the shape seen adjacent to the crossing. Pull perched soil from drainage edges and spread it evenly across the fire line.

- Do not remove large woody debris which was in the channel prior to the fire, bucked limbs and logs in watercourses from fire suppression activities should be removed from the watercourse.
- Where fire lines are constructed within 100 feet of intermittent and perennial streams, use certified weed free straw, wood strands, or slash to increase soil cover and prevent sediment from entering the stream channel.

Summary of Suppression Damage Repair Guidelines

Water Drafting Sites: Water sources developed as a water draft site are to be restored to a condition resembling pre fire use. Remove any dams, dikes, or other impoundments that were created for fire suppression activities.

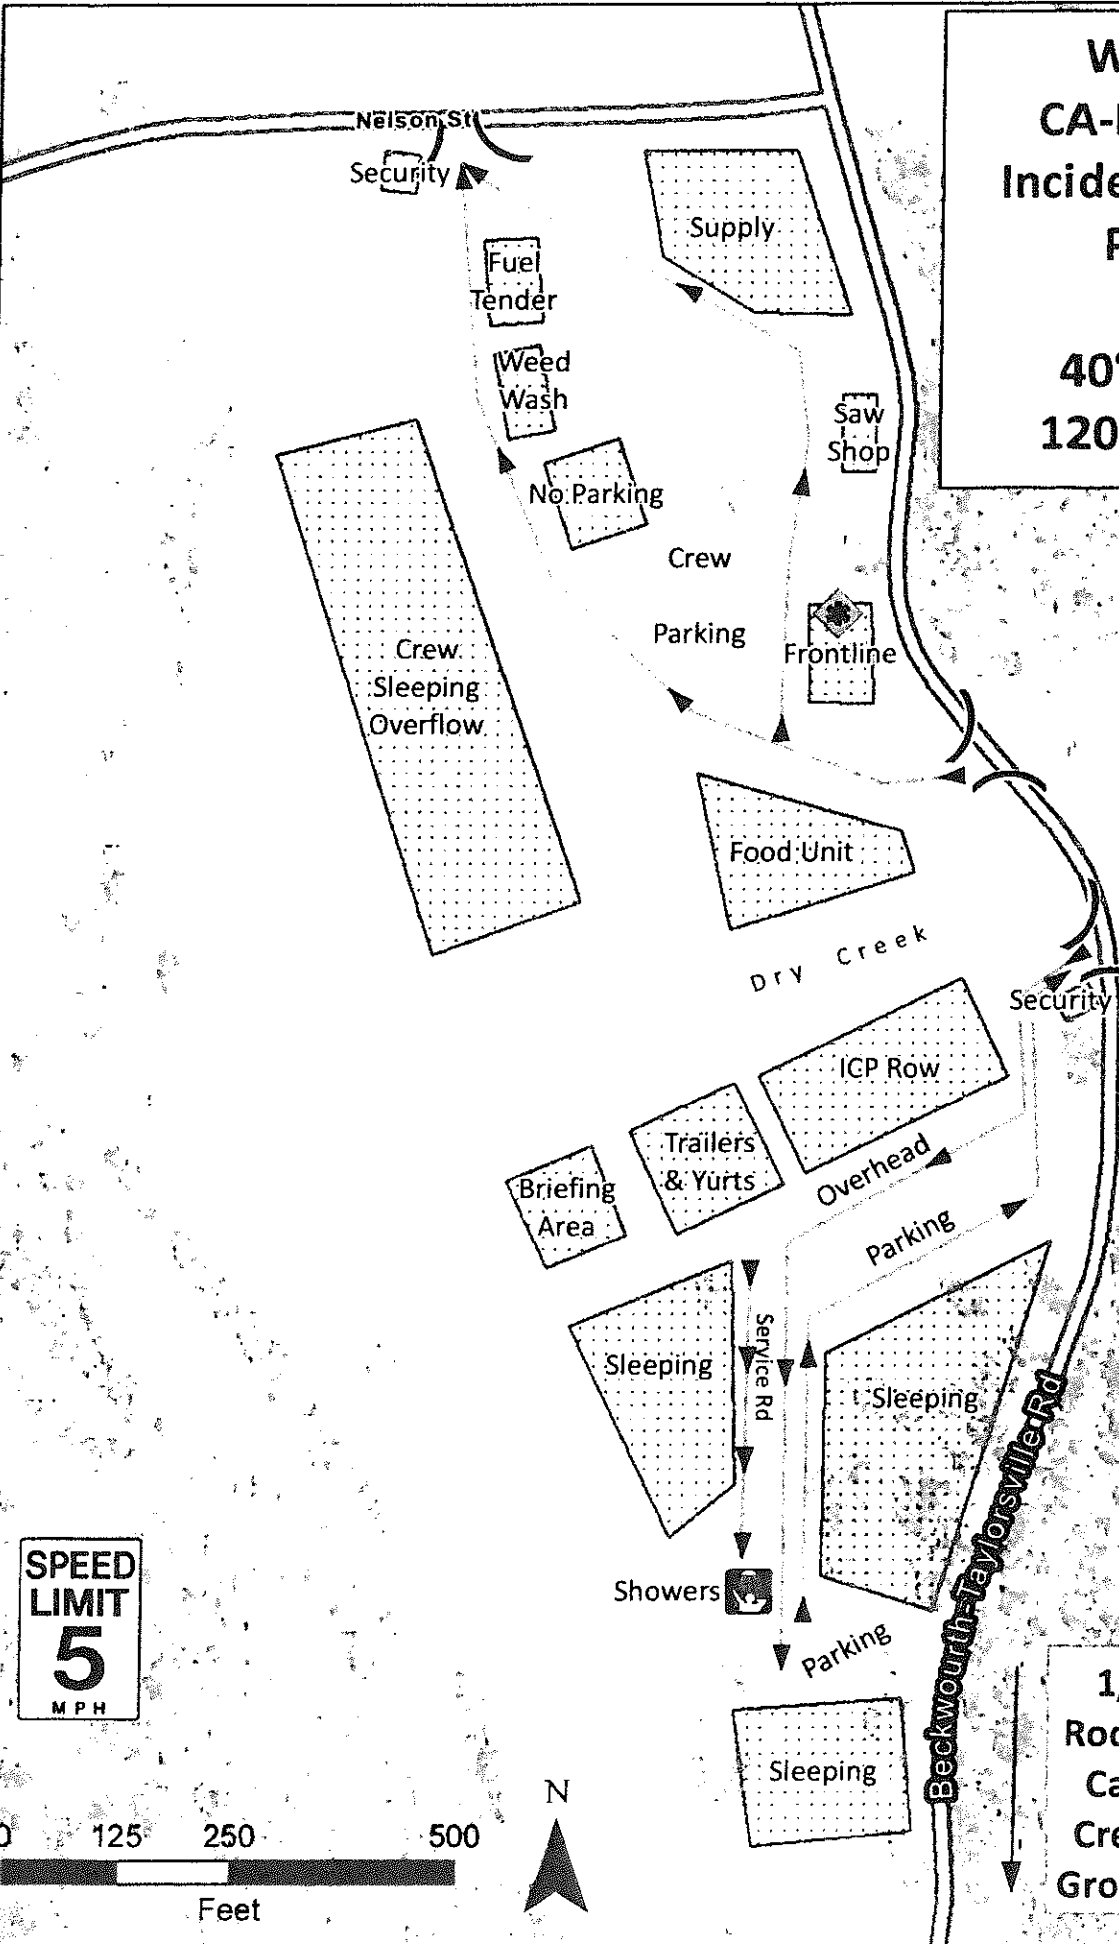

Concentrations of Slash: Concentrations of slash created by fire suppression activities along roadways, developed recreation areas, and among structures should be chipped and spread across the cleared area. Chip piles should not exceed 6 inches in depth. Where appropriate, concentrations of slash can be lopped and scattered, not to exceed 18 inches in height.

OTHER SUPPRESSION DAMAGE REPAIR NEEDS:

- Repair fences, gates, and cattle guards so that they are functional. These repairs must be related to suppression fire activities.
- Hazard trees should be felled if they pose a safety threat to the general public. Hazard trees to be felled will be identified and marked by a Division Group Supervisor or Felling Boss, using the R5 Hazard Tree Guide.
