SHIFT DATE: Sept 17, 2019 SIGNED: Mike Smith *Mike Smith*
TIME AND DATE Incident Meteorologist
FORECAST ISSUED: 2100 Sept 16, 2019

WEATHER DISCUSSION: Today will see a break in the wet pattern with fair skies and some drying expected although morning fog is likely in the canyons. Even with the drying, minimum humidity values will be quite moderate for this time of year due to the rain on Monday. Winds should be relatively light today under this brief period of high pressure. Yet another weather system dropping through the Pacific Northwest and northern California will bring another good chance of wetting rain Wednesday afternoon and Wednesday night. Thursday will see things start to dry out again beginning a longer period of warming and drying.

WEATHER FORECAST:

WEATHER: Valley fog in the morning clearing to fair skies by late morning.

TEMPERATURES: Maximum temperatures 58-66.

HUMIDITY: Min RH 28-38%.

20 FT WINDS:

RIDGETOP – Light southwest to 5 mph through about 1100 then southwest to west 5-10 gusts 15-20 mph.

SLOPE/VALLEY - Downslope/downcanyon to 5 mph becoming upslope/upcanyon 3-8 gusts to 12 mph in the afternoon.

HAINES INDEX: 2

STABILITY/INVERSION: Inversions and fog in the valleys in the morning clearing to fair stable conditions.

Outlook for Tuesday night: Fair skies with some scattered high clouds by morning. Some valley fog possible. Minimum temperatures 38-46. Max RH recovery 65-75%. Ridge winds becoming southwest 4-8 gusts to 15 mph after about 2000. Slope winds becoming downslope to downcanyon to 4 mph after about 2000. Some west gusts to 10 mph upper west slopes.

Extended forecast for Wednesday: Increasing clouds with a chance of rain by afternoon. Wetting rain likely. Showers continuing into the evening. Maximum temperatures 53-58. Min RH 50-60% before the rain starts. Afternoon ridge winds southwest to west 8-15 gusts to 20 mph. Slope winds upslope to upcanyon mainly southwest to west 3-8 gusts to 12 mph in the afternoon. Higher gusts upper west slopes.

Extended forecast for Thursday: Morning valley fog. Mostly cloudy in the morning becoming partly cloudy in the afternoon. Maximum temperatures 55-60. Min RH 35-45%. Ridge winds north to northeast 5-15 mph. Slope winds upslope to upcanyon 3-8 gusts to 12 mph.

WEATHER SUMMARY

****Review Incident Weather Forecast****

Weather: Fair skies and morning fog in the canyons.
Day Temps: 58-66 degrees
Day RH: 28-38%

20 FOOT WINDS: **Ridges:** Light SW 5mph through about 1100 then SW to W 5-10 Gust 15-20mph.
Slope/valley: Downcanyon 5 mph becoming upslope 3-8 gust to 12mph.

See Incident Weather Forecast for overnight weather

FIRE BEHAVIOR

INPUTS:

- **Fuels:** Fuel moistures will begin to drop with increased solar radiation, lower RH and light wind. Forecasted 10hr. FM will be 20-23%.
- **Topography:** Boulders and fire stressed trees can become dislodged and roll downhill bringing additional debris with them.
- **Weather:** Approx. 150 ground strikes throughout the area from yesterday's storm.

FIRE BEHAVIOR: Fire behavior will be minimal throughout the fire perimeter and consist of creeping in sheltered and large down and dead fuel. The potential for holdovers exists.

BRANCH I: Expect limited fire activity as fuel moistures have increased rendering them less receptive to burning. Sheltered fuels may smolder and creep. Assigned work objectives should be successful. Secondary fire affects (fire weakened trees, rolling material, poor road conditions) may interfere with assigned work objective. Mitigate hazards before engaging.

BRANCH III: Expect limited fire activity as fuel moistures have increased rendering them less receptive to burning. Sheltered fuels may smolder and creep. Assigned work objectives should be successful. Secondary fire affects (fire weakened trees, rolling material, poor road conditions) may interfere with assigned work objective. Mitigate hazards before engaging.

BRANCH V: Expect limited fire activity as fuel moistures have increased rendering them less receptive to burning. Sheltered fuels may smolder and creep. Assigned work objectives should be successful. Secondary fire affects (fire weakened trees, rolling material, poor road conditions) may interfere with assigned work objective. Mitigate hazards before engaging.

SUPPRESSION REPAIR GROUP: Secondary fire affects (fire weakened trees, rolling material, poor road conditions) may interfere with assigned work objective. Mitigate hazards before engaging.

Walker Fire– Safety Message

INCIDENT: CA-PNF-001324

DATE: 09-17-2019

TIME: 0600 – 1800 Day Shift

Situational Awareness:

Start the day with a briefing and re-brief during the day as the job changes. Use all the assessment guides to develop and maintain Situational Awareness. Constantly re-evaluate your situation throughout the day. Use the time tested process of “Looking Up, Down, and All Around”, and the other assessment materials from the Incident Response Pocket Guide.

WATCH-OUTS

- **Fatigue** – You are now many days into this fire or others and have completed some tough and tiring work assignments. **WATCH OUT** for slowed reaction times, inattention to details, and gaps in your attention span. Take positive action to get adequate rest, be deliberate in decision making and heighten your awareness to factors affecting your work.
- **Communications** – With the changes in the work areas, ensure that communications exist. Will a human repeater be necessary?
- **Vehicle Driving** - Roads are steep and narrow with many blind corners. Drive slowly, defensively, with your lights on, and stay on your side of the road! **WATCH OUT** for commercial, private vehicles, and other vehicles that commonly drive faster than we do.
- **Wildlife and Cattle:** Both deer and cattle are very common on the incident, especially during the dawn and dusk hours. When you see one deer, expect others to follow.
- **Medical Plan** - Know where assigned medical personnel are located. Know in advance the request process in the Medical Plan. Ensure positive communications with the ICP.
- **Danger/Hazard Trees:** Continue to evaluate the areas around and under all trees. Use the IRPG guidelines on page 22. Minimize the exposure, and exposure time.

Fight Complacency

- One common reason for firefighter injury in the latter stages of a fire is when the firefighter throws her/his mind into neutral and doesn't think about the work they are doing. They are not thinking about how to do the job right, but just how to get the job done so they can just get home. Couple this with fatigue, and you really have a “**WATCHOUT.**”
- There's a difference in between just getting the job done, versus getting the job done when **MENTALLY ENGAGED.**

So with that, keep your mind engaged and attentive to the task. Continually ask yourself if you are doing the job safely, the way you were trained. Keep an eye on your co-workers too. If you see them doing something that is unsafe, **YOU NEED TO SAY SOMETHING** immediately about the unsafe act.

CIIMT4 SAFETY TEAM

INCIDENT RISK ANALYSIS

(ICS 215a) 0600-1800 Day Shift

BR/ DIV	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL	DRIVING	<ul style="list-style-type: none"> • Use caution while driving on all incident roads. Non fire personnel speeds in the area are often faster than we normally drive • Dirt roads may be slippery when wet. Watch out for possible stream debris from the rain • Watch out for wildlife on all roads, especially during the dawn and dusk hours • Drive defensively! Expect the unexpected around every curve • Drive with headlights on; use chock blocks, keep windshields clean; use backers • Watch for other vehicles, debris, and wildlife on the roads • Use caution on area roads. The roads are very narrow with steep drop-offs
ALL	HAZARD / DANGER TREES	<ul style="list-style-type: none"> • Refer to Hazard Tree Safety Guidelines (IRPG p.22-23) • Limit number of personnel around snags and their exposure time; fallers must be qualified for the trees being felled • Be especially alert around snags and green trees during wind events.
ALL	STEEP TERRAIN & ROLLING MATERIAL	<ul style="list-style-type: none"> • Avoid working below crews and equipment • Concentrate on your footing placement; take your time • Ensure adequate spacing between crewmembers so they can react to dislodged debris • Post lookouts to warn of rolling debris. SHOUT out to warn others • Look Up, Down and Around
ALL	MOP UP OPERATIONS	<ul style="list-style-type: none"> • Evaluate areas for hazard trees and locate stump holes for avoidance • Monitor fatigue, shorten shifts to increase rest where appropriate • Provide motivation to workers to maintain situational awareness and avoid complacency • Evaluate mop up distances against what is safe and necessary • Review and follow "Look Up, Look Down, Look Around" • Balance the risk of exposure to hazards against the Mop Up objective
ALL	HEAVY EQUIPMENT OPERATIONS	<ul style="list-style-type: none"> • NEVER work below heavy equipment • Ensure communications are established with operators • Ensure ground personnel have safety illumination, with light-sticks being the minimum • Maintain a 50'-100' exclusion area around equipment • In timber increase safety distance to 2 ½ times canopy height
ALL	DEMOB	<ul style="list-style-type: none"> • Ensure vehicle is ready for the trip home, lights, wipers etc. • Obtain adequate rest prior to departure. • Travel between 0600 and 2200 hours and don't exceed 10 hours of driving per single driver. • Take adequate rests during the trip home. • Advise your Communication Center at the completion of the travel.
ALL	CAMP CRUD	<ul style="list-style-type: none"> • See the Medical Unit at the onset of signs/symptoms • Take vitamins, drink lots of water and juice • Eat balanced meals • Get as much rest as possible • Use hand sanitizers, and take precautions when using "common use" areas
ALL	FATIGUE & COMPLACENCY	<ul style="list-style-type: none"> • Be alert for signs of fatigue and take breaks as necessary. • Maintain 2:1 work/rest ratio. • Monitor ALL resources for level of fatigue. • Recognize the symptoms of fatigue and take action as necessary to provide rest and recovery. • Repeated assignments in the same area can lead to complacency making personnel more vulnerable to accidents. • Take steps (switching of assignments, training opportunities during slow periods, etc.) to maintain situational awareness for the duration of the incident
ALL	COMMUNICATIONS	<ul style="list-style-type: none"> • Share Situational Awareness (hazards, changes, etc.) to those who also have a need • Radio Communications may be poor in some areas: use human repeaters as needed • Ensure all personnel are familiar with the incident and IA communications plans • Make sure all resources have radios cloned appropriately • Ensure that non-agency resources understand radio use and procedures
ALL	WEATHER	<ul style="list-style-type: none"> • "Keep informed on fire weather conditions and forecasts." • Anticipate increasing and gusty winds. • Expect increased fire behavior, including spotting. • Communicate any increase in wind speed and direction. • Be especially alert around snags during wind events.

Human Resource Message

Patience

There are many benefits to developing and practicing patience, for both you and those around you!

- Anger and stress are two things that are enough to ruin a person's health. Patience is the antidote to both.
- Patience allows time for strategic thinking and completely evaluating a situation. Things have time to fall into place, presenting a clearer strategic view of what's taking place.
- Patience allows us to be kind to those in a variety of situations and communicate openly to alleviate any misunderstandings and mistrust.
- It gives us the persistence to carry out things that will lead us to a long-term goal.

*Patience is not the ability to wait,
but how you act while you're waiting.*

~Joyce Meyer

Sensitive Sites are marked with yellow and black or red and black striped flagging.

Back-hauled all trash and un-needed flagging. Please leave safety flagging in place.

On Firelines, waterbars should be installed as described below, fire line covered with slash, and entrances blocked.

Dozer Line

Fire line Gradient (% slope)	Distance Between Waterbars ^(A) (feet)
0 to 10	No waterbars needed

- (A) These are guidelines and are not intended to restrict the implementation of more or less water bars if the need or lack of need is justified.

(B) Firefighter safety should be taken into account; if slopes are too steep for safe implementation then waterbars should not be constructed, if sensitive resources are not present.

- **DEPTH AND WIDTH: Waterbars need to be cut into surface**, do not simply push up soil.
 - Waterbar depths for **dozer lines** should be at least 6 inches; total height from bottom of ditch to the top of the waterbar should average at least 18 inches and not exceed 24 inches.
 - Waterbar depths for **hand lines** should be at least 4 inches; total height from bottom of ditch to top of waterbar should average at least 8 inches and not exceed 12 inches.

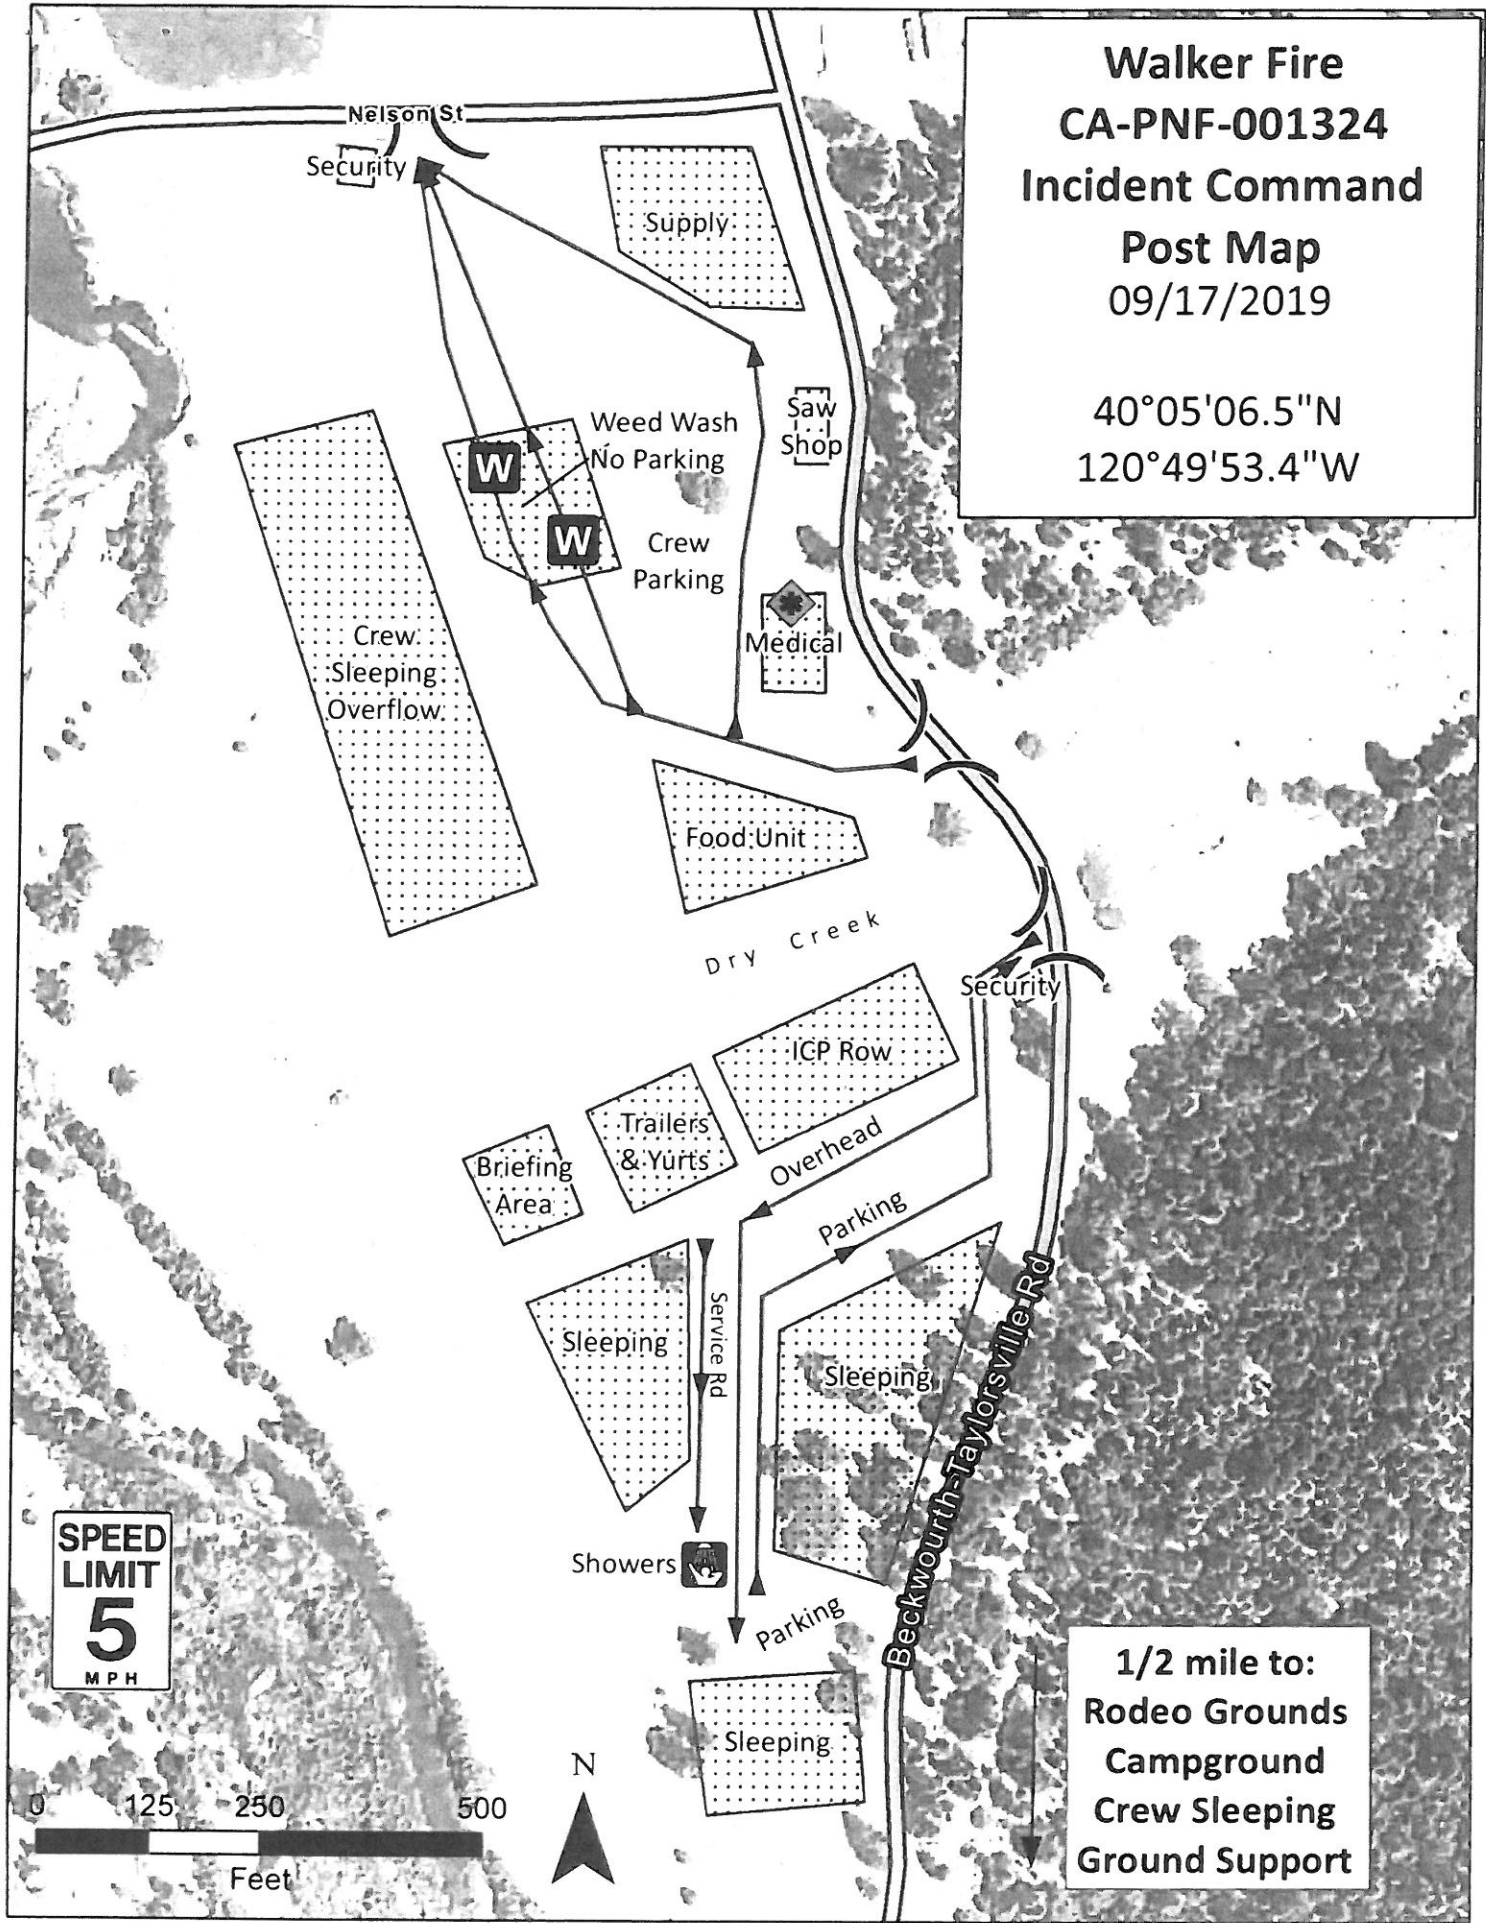

Helispots, Safety Zone, Spike Camp, and Staging Areas: These fire suppression activity areas should be repaired to standards similar to fire line repair. Waterbars place where appropriate. Use cleared vegetative material, and slash for soil cover

Watercourses: Remove deposited soil from streams, watercourses, swales, or draws back to the original contour. Remove only as much as feasible without further damage to the watercourse. Restore bank channels at fire line crossings back to the shape seen adjacent to the crossing. Pull perched soil from drainage edges and spread it evenly across the fire line.

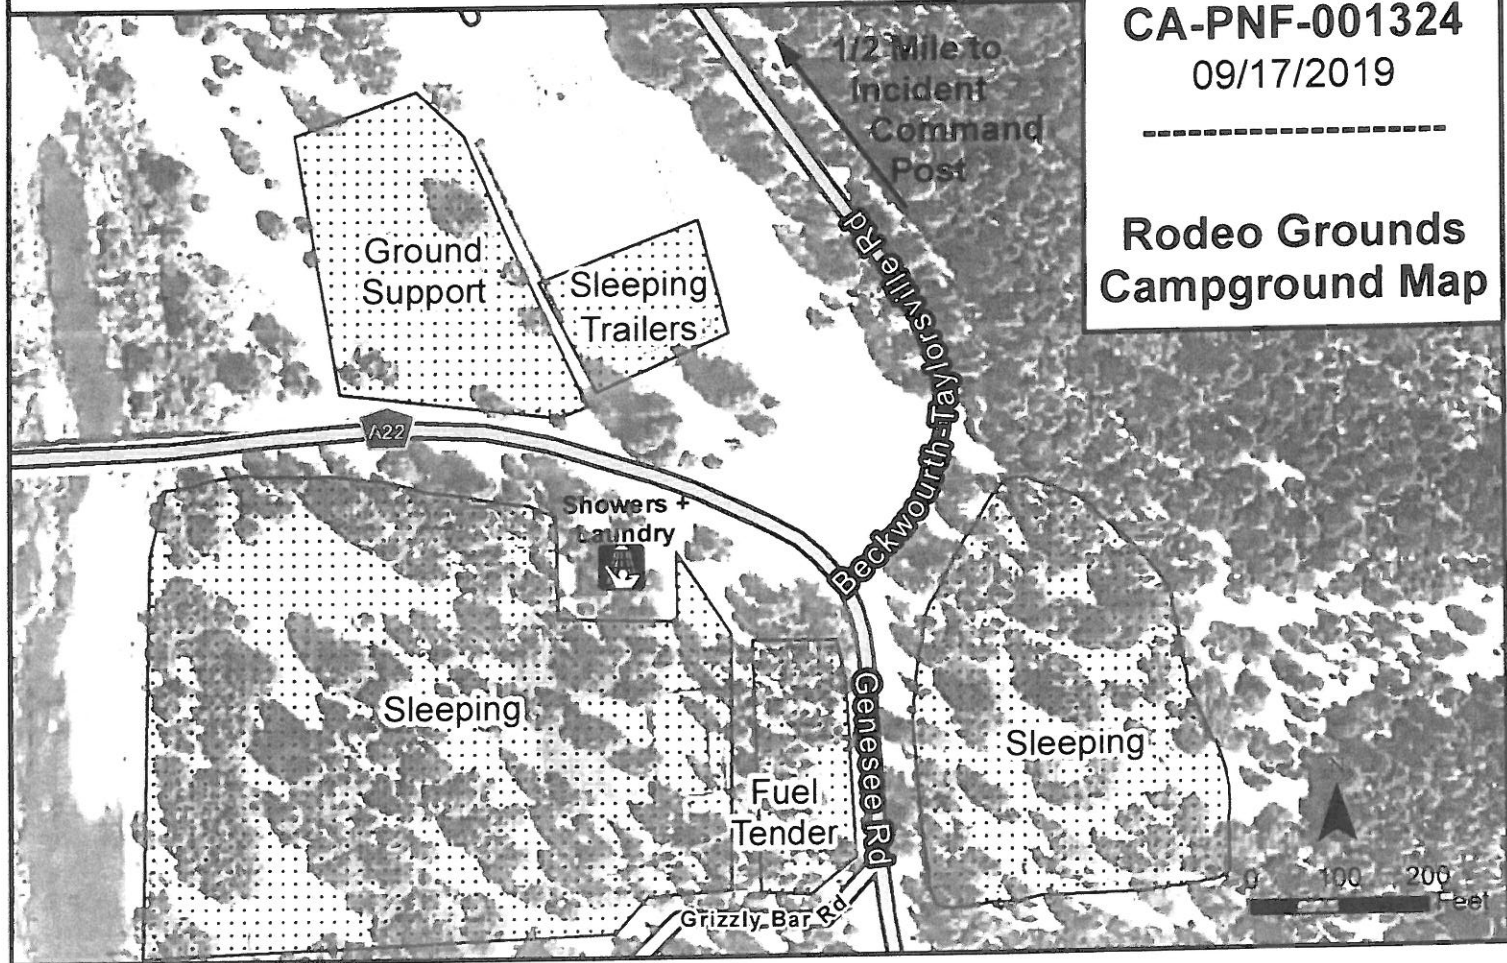

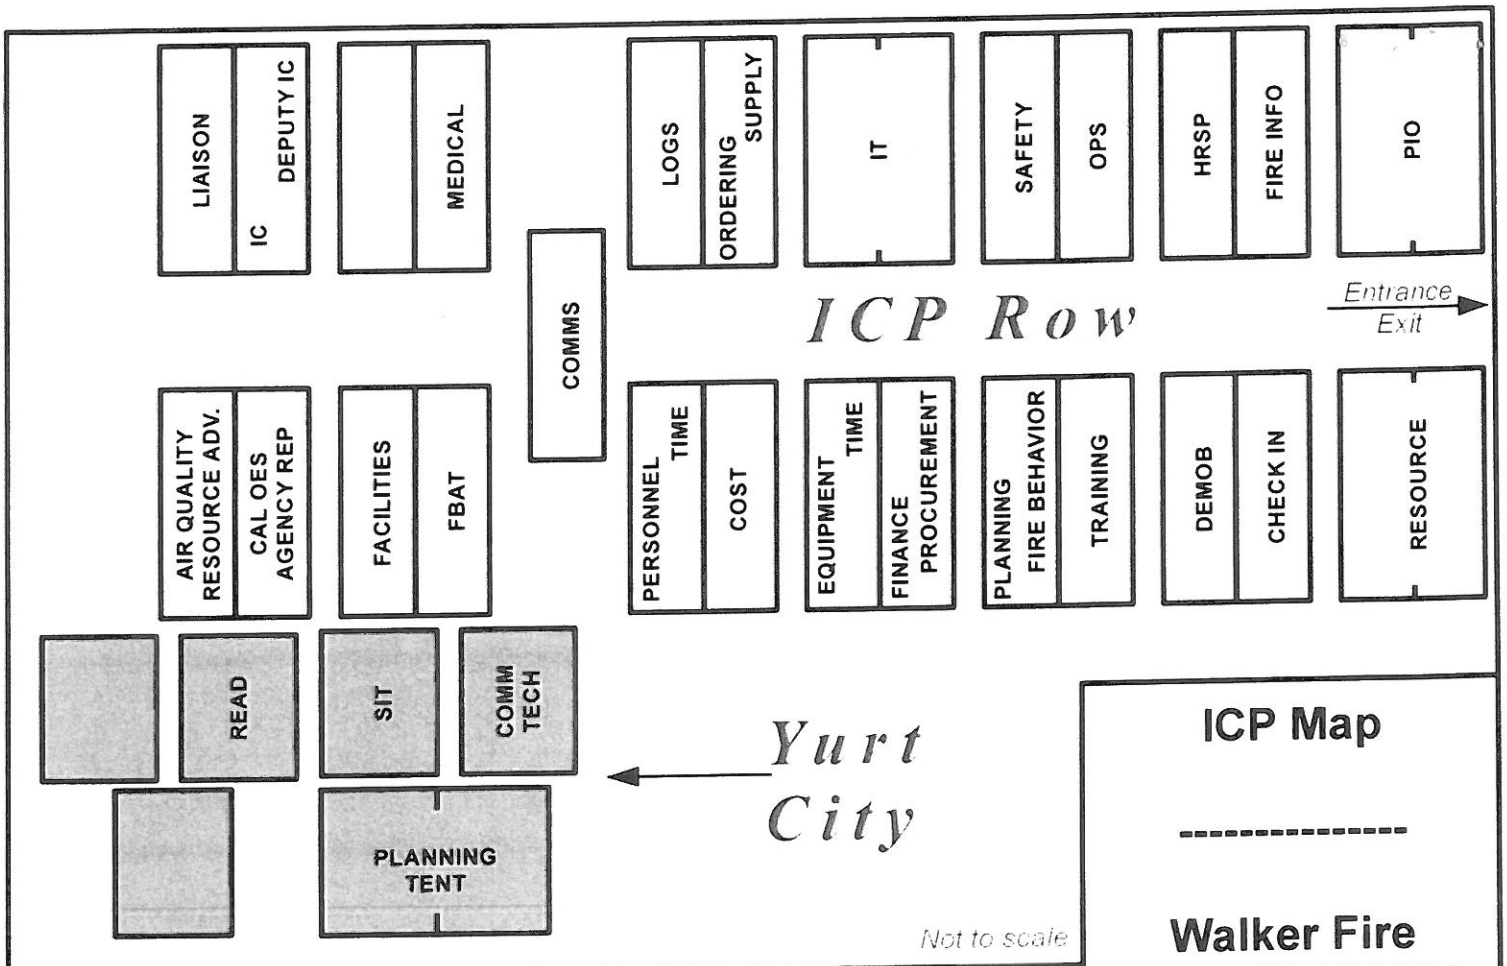

- Do not remove large woody debris which was in the channel prior to the fire, bucked limbs and logs in watercourses from fire suppression activities should be removed from the watercourse.
- Where fire lines are constructed within 100 feet of intermittent and perennial streams, use certified weed free straw, wood strands, or slash to increase soil cover and prevent sediment from entering the stream channel.
