# FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 18	TYPE OF FIRE: Wildfire
FIRE NAME: Walker	OPERATIONAL PERIOD: September 19, 2019, Day
DATE ISSUED: September 18, 2019	TIME ISSUED: 2000
UNIT: Plumas NF	SIGNED: Diondray Wiley FBAN (T)

## INPUTS

### WEATHER SUMMARY

**\*\*Review Incident Weather Forecast\*\***

**Weather:** Morning valley fog, mostly cloudy in the morning becoming cloudy in the afternoon  
**Day Temps:** 54-61 degrees  
**Day RH:** 38-48%

**20 FOOT WINDS:** **Ridges:** NW 2-6 mph gust to 10mph becoming NW to N 4-8 with gust to 15 mph.  
**Slope/valley:** Downslope 2-5 mph becoming upslope 3-6 gust to 12 mph.  
Higher gust upper gust west slope.

## FIRE BEHAVIOR

### INPUTS:

- **Fuels:** Fuel moistures will increase with the upcoming rainstorm in addition to good overnight RH recovery
- **Topography:** Boulders and fire stressed trees can become dislodged and roll downhill bringing additional debris with them.
- **Weather:** Rainy conditions can adversely affect driving conditions.

**FIRE BEHAVIOR:** Fire behavior will be minimal throughout the fire perimeter and consist of smoldering in sheltered and large down and dead fuel. The potential for holdovers exists.

**BRANCH I:** Expect limited fire activity as last night's rains have increased fuel moistures rendering them less receptive to burning. Sheltered fuels may smolder and creep. Assigned work objectives should be successful. Secondary fire affects (fire weakened trees, rolling material, poor road conditions) may interfere with assigned work objective. Mitigate hazards before engaging.

**BRANCH III:** Expect limited fire activity as last night's rains have increased fuel moistures rendering them less receptive to burning. Sheltered fuels may smolder and creep. Assigned work objectives should be successful. Secondary fire affects (fire weakened trees, rolling material, poor road conditions) may interfere with assigned work objective. Mitigate hazards before engaging.

**BRANCH V:** Expect limited fire activity as last night's rains have increased fuel moistures rendering them less receptive to burning. Sheltered fuels may smolder and creep. Assigned work objectives should be successful. Secondary fire affects (fire weakened trees, rolling material, poor road conditions) may interfere with assigned work objective. Mitigate hazards before engaging.

**SUPPRESSION REPAIR GROUP:** Secondary fire affects (fire weakened trees, rolling material, poor road conditions) may interfere with assigned work objective. Mitigate hazards before engaging.

## AIR OPERATIONS

Limited morning inversion braking to slightly unstable conditions

## SAFETY

**\*\*ROCKS SLIDES WILL OCCUR, ESPECIALLY IN CHUTES AND DRAINAGES. \*\*\***

# Walker Fire – Safety Message

INCIDENT CA-PNF-001324

DATE: 09/19/19

TIME: 0600 – 1800

**“SAFETY is a CORE VALUE to be integrated into ALL incident activities”**

## COMMUNICATION RESPONSIBILITIES

All firefighters have **five** communication responsibilities:

- Brief others as needed.
- Debrief your actions.
- Communicate hazards to others.
- Acknowledge messages.
- Ask if you don't know or are unclear.

## Leadership

All leaders of firefighters have the responsibility to provide complete briefings that include a clearly stated “Leader’s Intent.”

- **Task** = **What** is to be done
- **Purpose** = **Why** it is to be done
- **End State** = How it should **look** when done

## Transitions

Transitions between Incident Management Teams are critical periods:

- There is the Transition between humans and there is also condition randomness as the fire grows and changes;
- Ensure all completely know who they are working for and they understand the plan;
- Provide motivation to workers to maintain situational awareness, especially if you are assigned to a different area of the fire;
- Always ensure LCES is in place;
- Transitions between Incident Management Teams are commonly referred to as the 19th Watch Out Situation.

## Driving

- When driving, keep speed at or **below** the posted speed limit. Use caution around train crossings.
- Drive defensively! Expect the unexpected around every curve.
- Watch out for debris and wildlife on the roads.
- Don't tail gate, keep a safe distance between vehicles on dirt roads.
- Always fasten your seat belt before the vehicle is set into motion.
- Use a “Backer” when backing your vehicle. Do a walk around if a “Backer” is not available.
- Remember, forest visitors drive faster and more aggressively than we do- Heads up!

Prepared by,

Team 4 Safety Group

ALL	DRIVING	<ul style="list-style-type: none"> <li>• Use caution while driving on all incident roads. Non fire personnel speeds in the area are often faster than we normally drive</li> <li>• Dirt roads may be slippery when wet. Expect the unexpected around every curve</li> <li>• Drive with headlights on; use chock blocks, keep windshields clean; use backers</li> <li>• Watch for other vehicles, debris, and wildlife on the roads</li> <li>• Use caution on area roads. ALL	HEAVY EQUIPMENT OPERATIONS	<ul style="list-style-type: none"> <li>• NEVER work below heavy equipment</li> <li>• Ensure communications are established with operators</li> <li>• Ensure ground personnel have safety illumination, with light-sticks being the minimum</li> <li>• Maintain a 50'-100' exclusion area around equipment</li> <li>• In timber increase safety distance to 2 ½ times canopy height</li> </ul>

## Summary of Suppression Damage Repair Guidelines

**Objectives** - The objective of the fire suppression is to repair areas disturbed by fire suppression activities into a condition that does not negatively affect natural and cultural resources and will not create to excessive erosion on the landscape. Without compromising public and firefighter safety.

- Reduce the potential for soil erosion and sedimentation
- Reduce the visual impacts of fire line as well other suppression activities when feasible
- Repair roads and drainage structures to a functioning condition
- Protect natural and cultural resources from additional potential damage

### Critical Guidelines

**Sensitive Sites** are marked with yellow and black or red and black striped flagging.

**Back-hauled** all trash and un-needed flagging. Please leave safety flagging in place.

**On Firelines, waterbars** should be installed as described below, fire line covered with slash, and entrances blocked.

#### Dozer Line

Fire line Gradient (% slope)	Distance Between Waterbars (A) (feet)
0 to 10	No waterbars needed
10 to 20	100
21 to 40	75
41 to 60 (B)	50 (B)

- (A) These are guidelines and are not intended to restrict the implementation of more or less water bars if the need or lack of need is justified.

(B) Firefighter safety should be taken into account; if slopes are too steep for safe implementation then waterbars should not be constructed, if sensitive resources are not present.

- **DEPTH AND WIDTH: Waterbars need to be cut into surface**, do not simply push up soil.
  - Waterbar depths for **dozer lines** should be at least 6 inches; total height from bottom of ditch to the top of the waterbar should average at least 18 inches and not exceed 24 inches.
  - Waterbar depths for **hand lines** should be at least 4 inches; total height from bottom of ditch to top of waterbar should average at least 8 inches and not exceed 12 inches.

**Helispots, Safety Zone, Spike Camp, and Staging Areas:** These fire suppression activity areas should be repaired to standards similar to fire line repair. Waterbars place where appropriate. Use cleared vegetative material, and slash for soil cover

**Watercourses:** Remove deposited soil from streams, watercourses, swales, or draws back to the original contour. Remove only as much as feasible without further damage to the watercourse. Restore bank channels at fire line crossings back to the shape seen adjacent to the crossing. Pull perched soil from drainage edges and spread it evenly across the fire line.

- Do not remove large woody debris which was in the channel prior to the fire, bucked limbs and logs in watercourses from fire suppression activities should be removed from the watercourse.
- Where fire lines are constructed within 100 feet of intermittent and perennial streams, use certified weed free straw, wood strands, or slash to increase soil cover and prevent sediment from entering the stream channel.

## Summary of Suppression Damage Repair Guidelines

**Water Drafting Sites:** Water sources developed as a water draft site are to be restored to a condition resembling pre fire use. Remove any dams, dikes, or other impoundments that were created for fire suppression activities.

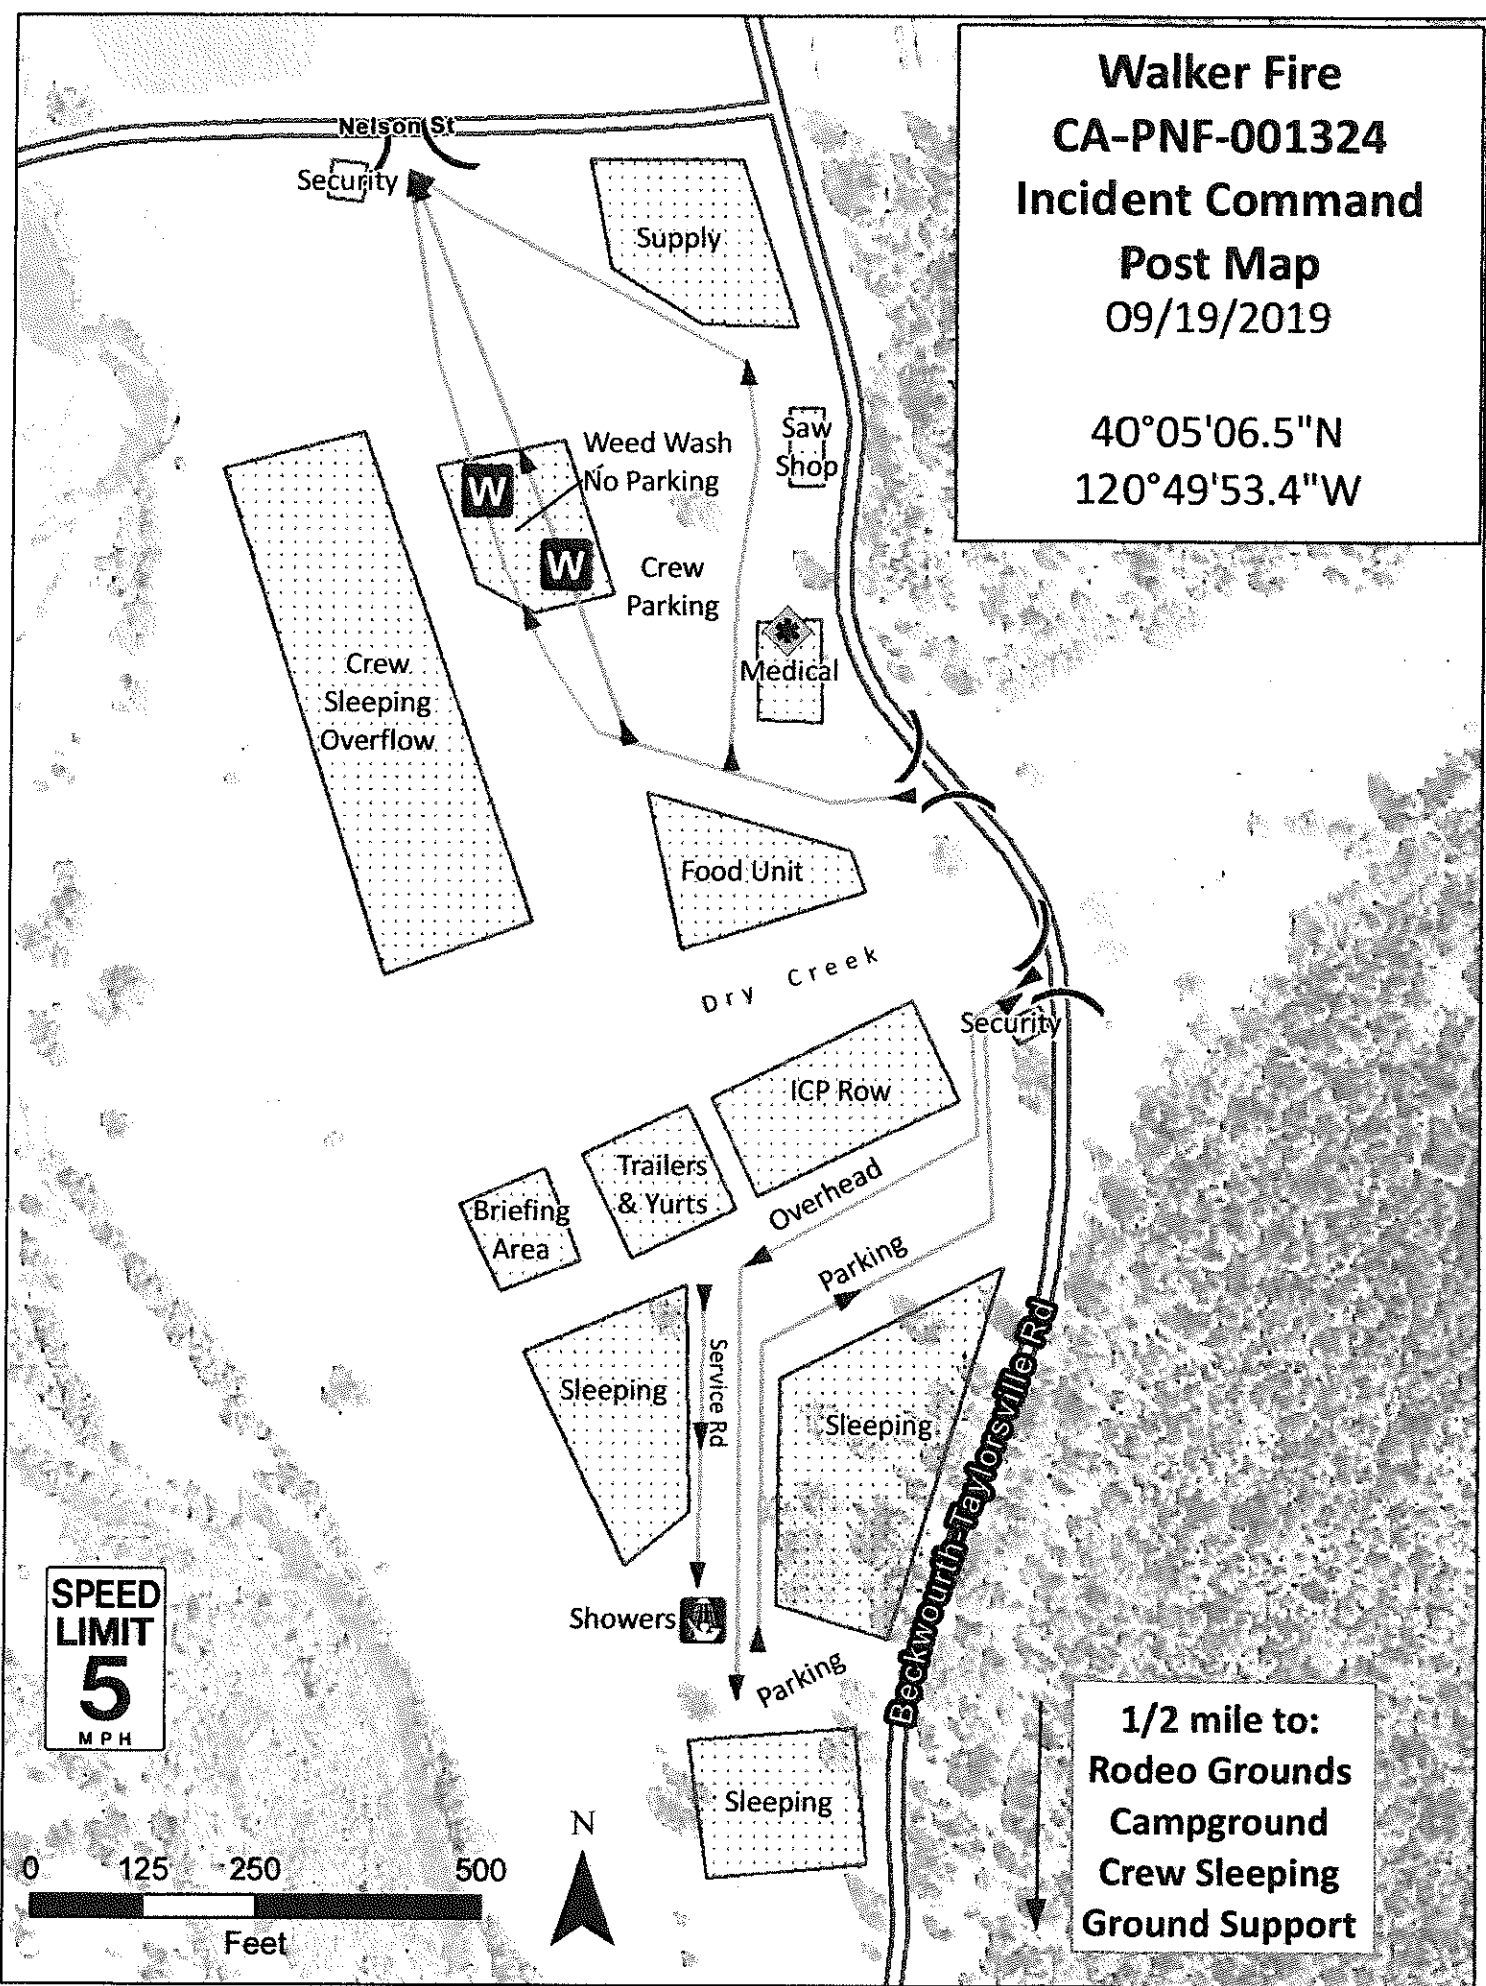

**Concentrations of Slash:** Concentrations of slash created by fire suppression activities along roadways, developed recreation areas, and among structures should be chipped and spread across the cleared area. Chip piles should not exceed 6 inches in depth. Where appropriate, concentrations of slash can be lopped and scattered, not to exceed 18 inches in height.

### **OTHER SUPPRESSION DAMAGE REPAIR NEEDS:**

- Repair fences, gates, and cattle guards so that they are functional. These repairs must be related to suppression fire activities.
- Hazard trees should be felled if they pose a safety threat to the general public. Hazard trees to be felled will be identified and marked by a Division Group Supervisor or Felling Boss, using the R5 Hazard Tree Guide.
