AUGUST 20, 2013

NIGHT Operational Period

1800 - 0600

5. General Control Objectives for the Incident (include alternatives)

Management Objectives

1. Provide for firefighter and public safety
2. Maintain a high level of collaboration with local communities, neighboring and cooperating agencies.
3. Minimize disruption to local economies and seek opportunities to offset lost revenue.
4. Provide IA response and resources for new starts through the Central Coast Incident Commander.

Control Objectives

The complex is made up of many individual fires.

The intent is to suppress each fire in the smallest area that can be safely accomplished with available resources.

INPUTS

WEATHER SUMMARY:

...RED FLAG WARNING IN EFFECT UNTIL 1700 HOURS THURSDAY FOR THUNDERSTORMS...

UPPER LOW PRESSURE OFF THE CALIFORNIA COAST WILL KEEP A THREAT OF THUNDERSTORMS OVER THE AREA THROUGH THURSDAY. ABUNDANT LIGHTNING AND GUSTY WIND IS POSSIBLE WITH STRONGER STORMS. Minimum Temp 55°-60°, Maximum RH 75-85%, winds slope/valley variable 1-3 mph, ridgetop northeast 5-10 mph chance of wetting rain 50%, LAL 4.

OUTPUTS

FIRE BEHAVIOR

GENERAL:

Fire behavior will be low to moderate, but will increase with thunderstorm activity to active and very active. Rollouts and falling snags will be a problem contributing to the spread of the fire. Outflow winds will increase fire behavior and could dramatically change the spread direction of established fires. Local threshold for fire weather: Winds greater than 6 mph, humidity less than 20%, temperature greater than 80°, and 10 hour fuel moisture less than 5%. **The Probability of Ignition will be 76% at the beginning of shift to 11% by morning. The fine dead fuel moisture will be 4% to 15%. Currently the dead fuel moistures are low with the 1000 hour fuels around 8%.**

SPECIFIC:

Gusty winds around thunderstorms may cause erratic fire behavior.

The larger fuels will hold fire through the higher humidity periods. Strong winds can overcome high humidity and high fuel moisture causing sleeping fires to awaken and move around. New strikes on dry large fuels can hold for several days coming to life with a breath of life. Expect new starts from the predicted lightning. Watch the sky and listen to the radio for weather updates. Thunderstorms have been coming out of the south. Outflow winds can increase the fire behavior and change the direction of spread in a short period of time.

AIR OPERATIONS: Thunderstorms may limit air operations during the beginning of the shift.

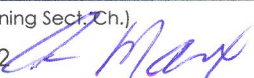

SAFETY

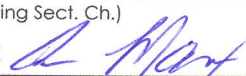

Risk Analysis

Initiate all actions based on current and expected fire behavior

- *Can the resources you are replacing give you a thorough briefing?*
- *Can you observe the area, use scouts?*
- *Have escape routes and safety zones been thoroughly scouted?*
- *Are they marked for night use?*
- *Have potential dangers been located, can they be dealt with?*
- *Access to weather and fire behavior forecast?*

Hough Complex – Safety Message

INCIDENT: # CA-PNF-001324

DATE: 08-20-13

TIME: 1800 – 0600 NIGHT

Major Hazards and Risks:

Environment

- **Thunderstorms (out flows) and lightning (page 19 in IRPG) Use 30/30 rule if it applies.**
- **Rugged steep terrain/ Rolling rocks and other materials**
- **Watch for snags on the line and roads, mark them and make them known. Look up and live.**
- **High temps during day (90 to 100) and low temps at night (low 40s)**
- **Red Flag Warning until this Thursday**
- **Natural asbestos can get airborne when broken up by dozers (Not abundant in area, looks wet and glossy)**

Human Factors

- **Transition of command to Central Coast Team 7, know your supervisor, ask questions...**
- **When driving keep speeds down, seatbelts on and your headlights on/ Watch out for logging trucks**
- **Possible long travel distances for initial attack and the growing fatigue factor**
- **Dehydration is a factor – drink plenty of fluids. Use 3 to 1 (water to Gatorade)**
- **Lookouts, Communication, Escape Routes and Safety Zones**
- **Don't forget to get an anchor point**

Animals, Insects and Other Pests

- **Ticks (Lyme Disease), Bees (aggressive), Mice (Hanta Virus), Rattle Snakes, Mountain Lions and Bears**
- **Numerous Deer on public roads during early morning and early evenings**

Narrative: Lightning-30/30 rule: If you see lightning and hear the thunderclaps follow in less than 30 seconds, take the storm precautions on page 19 of the IRPG. Do not resume work in exposed areas until 30 minutes after storm activity has passed.

The mature stage of the storm may be marked on the ground by a sudden reversal of wind direction, a noticeable rise in wind speed, and a sharp drop in temperature. Heavy hail, rain and lightning occur only in the mature stage of a thunderstorm. Keep informed: know what the storm is doing. During a thunder storm: do not use radios, put down all tools, stay in vehicles if possible, take shelter in a building, do not stand in the open, do not take shelter by tall objects such as isolated trees, avoid the top of ridges, hilltops, wide-open spaces, ledges, out-crop of rocks, and avoid grouping people together. Advise crew members that if they feel an electrical charge, if their hair stands on end, or their skin tingles, a lightning strike may be imminent.

Night Shift Notes:

- Dehydration can happen even at night. Take a lot of water with you. Pace yourself and take frequent breaks throughout the shift.
- Steep slopes cause rolling material. Keep heads up! Make sure of your footing and take your time. Watch out for SNAGS!!!
- Vehicle operation is a critical part of your job. Keep it slow. It may rain tonight, be very cautious on wet dirt roads.
- Obey posted one way traffic signs on China Grade road to Emigrant road.
