WEATHER SUMMARY

(Refer to Weather Forecast for details: Southwest onshore flow will continue today with continued high humidity after excellent overnight recovery. Winds will generally remain terrain driven with a west to southwest wind on the ridges. Low pressure will develop off the coast west of the Bay Area this weekend with the flow aloft becoming more south to southeast. Temperatures will increase as humidity lowers with an increase in instability. Thunderstorms are possible as early as Sunday, but are more likely Monday and Tuesday especially north and east of the fire.

Temps @ 85 lower slopes, 75 higher; RH @ 36% lower, 43% higher; Afternoon winds SW 4-7 gusts to 12mph

FUELS

The fire is burning in the footprint of the 1999 Megram fire. Fuels are snags, logs, and 13 year old ceanothus (snow brush).

Minimum fine dead fuel moisture: 7%, 1000 hour FMC 10%, 10 hour FMC: 6%, Live fuel moisture: 120%

OUTPUTS - FIRE BEHAVIOR

DAY SHIFT:

Thresholds for Active Fire Behavior in the Corral Fire area:

20ft Winds (over 7 mph), *RH (under 31%), *Temperature (over 82°) and *1000hr FMC (under 13%).

Large fires become more frequent when BI exceeds 50 and ERC exceeds 47

➤ **Forecasted Indices (change from yesterday) ERC: 55 (down 5) BI: 51 (down 5)**

**Maximum Fire Behavior (head fire upslope): Rate of Spread: ~5 chains/hour (5'/min),
Flame Length: 3-4 ft. Probability of Ignition: 50%. Maximum spotting distance of 700-1000 feet.**

GENERAL:

The primary carriers of fire are logs and branches killed in Megram Fire of 1999 and embers blown from burning snags. Embers are igniting deal logs and other snags.

Fire is established in Horse Linto drainage and can be expected to make a run in the late afternoon to the east. Spotting may exceed 1/3 mile during a run.

FEEDBACK: Collect WX orbs hourly and turn in to FBAN or IMET at end of shift. Please Include fire behavior.

AIR OPERATIONS

- Sunrise 06:35 Sunset 20:10 No expected smoke or fog impacts at heli-base.

SAFETY.

- The gusty winds this afternoon could bring down snags including snags outside of the fire area.
- Don't forget to look up before you look down.

Medical Evacuation of Personnel from Corral Complex

This fire is burning in very remote, steep and rugged terrain where access is difficult. Southern California Incident Management Team 2 is committed to providing the necessary response should any medical incident occur and to ensure that a rapid and appropriate evacuation is completed. This plan is designed to identify and outline the steps necessary to safely and effectively evacuate an injured firefighter from the Corral Complex and deliver that firefighter to an appropriate medical facility in both daytime and nighttime settings.

Once notification of a medical emergency, and the Division Supervisor and/or EMT's make the decision that a medical evacuation is required, Incident Management Team components will work together to accomplish the evacuation. Medical Unit Leader, Safety Officer, and Air Operations will join the Communications Unit in the communications trailer for a coordinated response. The highest qualified medical personnel on scene shall assume control of patient care. The Division Supervisor shall coordinate the response, and handle communications with incident communication unit and medical unit, and air to ground communications. The Division Supervisor may delegate communications to appropriate resources as needed to facilitate the operation.

Ground Medical Evacuation

- If the injured firefighter is *WITHIN* reasonable hiking distance from a road which can be driven and determined to have a condition which *WILL NOT* be aggravated by driving him/her out, then an incident vehicle shall be utilized to evacuate the injured firefighter from the scene to either the ICP Medical Unit or to a rendezvous point with a ground ambulance. The destination decision shall lie with the DIVS with consultation from the highest level care provider on scene.
- The following ground ambulance providers and locations for ground ambulance coverage for this incident location:

Agency	Base Location	Provider Level	Drive Time to ICP
Hoopa Ambulance	Willow Creek, CA	Paramedic	5 minutes
Hoopa Ambulance	Hoopa, CA	Paramedic	30 minutes

Air Medical Evacuation

- If the injured firefighter is *NOT WITHIN* reasonable hiking distance to a road and/or determined to have a condition which *WILL* be aggravated and worsened by driving him/her out, the following aircraft shall be launched based on the closest available resource needed to meet the injured firefighter at the helispot or hoist site. The Division Supervisor will coordinate a hand carry out of the injured firefighter to the helispot/hoist site. The rescue helicopter will evacuate the firefighter to an appropriate location based on medical necessity to rendezvous with ground ambulance, air ambulance, or hospital. Rescue aircraft and locations for this incident are:

Agency	Hoist Capabilities	Medical Capabilities	Base Location	Estimated Flight Time to Incident
CalFire107	Day Hoist	BLS	Kneeland, CA	25 minutes
CHP H-13	Day/Night Hoist	ALS	Redding, CA	40 minutes
Military Resources	Day/Night Hoist	BLS / Sometimes ALS	Multiple	45+ minutes (+ military call out time)
Assigned incident aviation resources as available	None	BLS / Sometimes ALS	Willow Creek Helibase, Additional Others as Available	Varies

- If the injured firefighter requires air ambulance transportation to a hospital, the following helicopters shall be utilized:

Agency	Base Location	Flight time to Incident
Reach 5	Redding, CA	40 Minutes
PHI Air Medical	Redding, CA	40 Minutes

Once lifted, the helicopters will experience an estimated flight time to each of the following facilities:

Hospital	Specialty Center	Location	Helipad	Flight time from Incident
Mercy Medical Center	Level 2 Trauma	Redding, CA	Depends on AC	40 minutes
UC Davis Hospital	Level 1 Trauma and Burn Center	Sacramento, CA	Yes	1.5 hours

INCIDENT: Corral Complex

DATE: 8-16-2013 Thru 8-17-2013

TIME: 06:00-06:00

Major Hazards and Risks: Vehicle Operations. Drive with headlights on and obey speed limits. Steep terrain and Snags. Be aware of Fatigue and dehydration. Watch for wildlife such as bears, bees and rattlesnakes. Be aware of possible marijuana plantations in the area. Poison oak is also in the fire area.

Fire Order of the Day – Maintain control of your forces at all times.

Narrative:

Steep terrain, Snags and rolling material pose a great threat to firefighters. Go slow and stay aware of your surroundings. Drink that water!! Remember if you feel thirsty it is too late your already dehydrated. While driving to and from the incident keep to the right and watch speeds. Review the Medical Evacuation Plan. See the Medical unit if you become exposed to poison oak. If you come across a marijuana plantation GPS location notify comm. unit, don't touch anything and leave the area.

Watch Out Situation of the Day

18.TAKING A NAP NEAR THE FIRELINE

- **Maintain Situational Awareness**
- **Communicate any weather changes**
- **Monitor your crew**
- **Utilize good communication skills**

HAZARD TREE – NO WORK ZONES (NWZ)

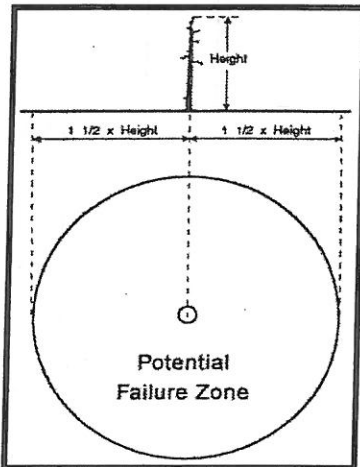

Hazard Tree Category

Knowing when the exact time a given hazard tree (or compromised section) will fail is an extremely difficult, and is, in many cases, an unpredictable task. Given this fact, we need to manage firefighters' exposure to these hazards by creating a safe work area or NWZ. The size and extent of the NWZ must be determined by onsite conditions, such as terrain, lean, active fire in the tree and adjoining trees.

When an identified hazardous tree cannot be felled, then perform an assessment of which areas have too high a risk, and post a lookout to warn the personnel to stay clear of these areas while working in adjacent areas. If hazard still exists before leaving the area, flag the NWZ so that personnel entering the area will be able to recognize the hazard. Use the following failure zone illustrations as examples to help manage firefighter exposure to these identified hazards. Also remember to include the possibility of the "Domino Effect" to surrounding trees.

#1 – 1 1/2 X Height of snag

#2 – 1 1/2 X trunk-to-branch-tip distance

#3 – 1-1/2 X length of dead top.
