Incident Action Plan

8-17-2013 06:00 to 8-18-2013 06:00

Lookouts Communications Escape-Routes Safety Zones

INCIDENT OBJECTIVES ICS 202	1. INCIDENT NAME Corral Complex	2. DATE PREPARED 8/16/2013	3. TIME PREPARED 22:58
4. OPERATIONAL PERIOD (DATE/TIME) <p style="text-align: center;">8-17-2013 0600 to 8-18-2013 0600</p>			
5. GENERAL CONTROL OBJECTIVES FOR THE INCIDENT (INCLUDE ALTERNATIVES)			
Incident Objectives:			
<ul style="list-style-type: none"> • Provide for firefighter and public safety in all incident operations. 			
<ul style="list-style-type: none"> • Protect property and infrastructure. Control fire closest to communities. 			
<ul style="list-style-type: none"> • Keep stakeholders, the public, and cooperators informed of fire status. 			
<ul style="list-style-type: none"> • Keep costs commensurate with identified values at risk. 			
<ul style="list-style-type: none"> • Protect cultural and natural resources. 			
<ul style="list-style-type: none"> • Protect wilderness values and utilize MIST in the Trinity Alps Wilderness. 			
Operational Objectives:			
<ul style="list-style-type: none"> • Keep the fire: <ul style="list-style-type: none"> o East and South of the Hoopa Valley Indian Reservation. o North of Lone Pine Ridge. o West of the defensible ridgeline running through Grizzly Camp and Trinity Summit along the county line, which had contingency line built in 2009 during the Backbone Fire. o South of Forest Service Road 8N10.

INCIDENT Weather Forecast

FORECAST NO: 2
PREDICTION FOR: Saturday-Saturday Night
SHIFT DATE: 08/17-18/2013 0600-0600
TIME AND DATE
FORECAST ISSUED: 08/16/2013 2100

NAME OF FIRE: Corral Complex
SHIFT Day-Night **UNIT:** CA-SRF
SIGNED: Jim Wallmann
Incident Meteorologist 

WEATHER DISCUSSION: Onshore flow will continue today but weaken slightly. Temperature and humidity will remain the same, but winds will shift to more from the northwest on ridges during the afternoon. Smoke will clear early again with the nocturnal inversion breaking early. However, there is another strong inversion present about 2,000 feet above the ground so the atmosphere remains fairly stable. The pattern will change Sunday as low pressure develops off the coast and moves through Tuesday. A more offshore flow will develop with north winds Sunday becoming more east to northeast Monday and Tuesday. Significant warming and drying will also occur with poor overnight humidity recovery. The atmosphere will become more unstable with thunderstorms possible Monday and Tuesday afternoons.

WEATHER FORECAST (TODAY):

WEATHER: Mostly sunny. Areas of smoke in the morning.

MAX TEMP:	Elev. 3500 ft: 80 - 84 F	Elev 6000 ft: 71 - 75 F	<i>Trend: Little change</i>
MIN RH:	Elev. 3500 ft: 37 - 41%	Elev 6000 ft: 45 - 50%	<i>Trend: Little change</i>

WINDS: Slopes: Upslope/Upvalley 3 to 6 mph.
(EYE LEVEL) Ridges: Southeast 2-5 mph becoming West to Northwest 4-6 mph with gusts to 12 mph after 1500.

TRANSPORT WIND: South 8 to 12 mph. **VISIBILITY:** 2-4 miles becoming better than 5 miles around 1000.

STABILITY: Moderate inversion weakening around 1100 then weakly stable. Mixing height 8,000 feet MSL.

FORECAST (TONIGHT):

WEATHER: Clear. Areas of smoke.

MIN TEMPERATURES: 55 to 59.

MAX RH: 50-60% early, falling to around 40% after midnight.

WIND: Slope: Becoming downslope 2-5 mph by 2200.

(eye level) Ridges: Northwest 3-6 mph becoming North to Northeast 5-7 mph around midnight.

OUTLOOK FOR SUNDAY:

WEATHER: Sunny. Areas of smoke.

MAX TEMP:	Elev. 3500 ft: 88 - 92 F	Elev 6000 ft: 79 - 83 F
MIN RH:	Elev. 3500 ft: 18 - 23%	Elev 6000 ft: 21 - 26%

WINDS: Slope: Upslope/Upvalley 3 to 6 mph.

(EYE LEVEL) Ridges: North to Northeast 5-7 mph with gusts to 12 mph becoming North to Northwest 3-6 mph with gusts to 10 mph in the afternoon.

OBSERVATIONS FRIDAY:

Big Hill RAWS (9 mi WNW - 3570 ft): Temp: MAX: 79. RH: MIN: 51%. Winds (20ft): WSW 6-8 gusts 14 mph.
Brush Mtn. RAWS (13 mi SW - 3941 ft): Temp: MAX: 80. RH: MIN: 46%. Winds (20ft): W 6-8 gusts 18 mph.
Helispot 2 @ 1130 (Div L - 5638 ft): Temp: 70. RH: 54%. Winds (eye level): SW 3-5 gusts 7 mph.
Hoopaa RAWS (10 mi W - 360 ft): Temp: 90. RH: 38%. Winds (20 ft): NNW 10-15 gusts 24 mph. (upcanyon)

Brush Mountain RAWS - Div A/F

Hoopaa (low elevation - for helibase)

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: #4	TYPE OF FIRE: Wildfire
FIRE NAME: CORRAL COMPLEX	OPERATIONAL PERIOD: August 17-18, 2013 0600-0600
DATE ISSUED: August 16, 2013	TIME ISSUED: 2000 hrs
UNIT: Six Rivers NF	SIGNED: Richard Gonzales, FBAN 

INPUTS

WEATHER SUMMARY

Refer to Weather Forecast for details: Mostly sunny. Max Temp: 71-75. Min RH: 45-50%.
Winds (eye level) Slope: light terrain driven winds 3-6 mph.
Ridge: W-NW 4-6 mph w/gust to 12 mph in afternoon..

FUELS

Fires are burning within the Megram Fire (1999) and Back Bone Fire (2009). Fuels consist of abundant Heavy Dead and Down, Snags and Shrubs (Ceanothus/Snow Brush).
Minimum fine fuel moisture: 7%, 1000 hour FMC: 9%, Live fuel moisture: 120%. Persistent drought conditions.

OUTPUTS - FIRE BEHAVIOR

GENERAL:

The primary carrier of the Fires are horizontal stacked logs and branches that have fallen due to previous Fires (Megram and Back Bone). Fires are slowly creeping through these fuels and consuming shrubs and snags. Snags are producing embers that are contributing to forward progress by spotting ahead.

Expect uncontrolled areas of heat along the perimeter. Heat will hold longer in the heavier fuels and in the drainage bottoms.

Corral Fire: continue to creep and back with available fuels. Growth is occurring Northerly towards Tish Tang a Tang Creek and into the Back Bone Fire scar. Along the Eastern flank, the Fire will continue backing towards Horse Linto Creek and establish in the drainage. Watch out for spots across creek and uphill runs on West facing slope as heat builds. Spotting will increase and carry further if W-NW winds develop. Southern development will continue with backing and rollout. Watch out for fires that establish in the Timber stringers. Western movement will occur by backing and with W-NW winds, ember production should push back into the Fire.

Expect fire behavior to increase earlier due to inversion lifting sooner and as wind speeds increase. This will be most pronounced on exposed ridges and slopes where the wind alignment occurs.

Maximum Fire Behavior Potential (Head Fire): Rate of Spread: 6 ch/hr. Flame Length: 4-6 ft. Probability of Ignition: 80%. Max spotting distance up to 1/8 mile (observed).

Local Thresholds for active fire behavior: 20' Windspeed > 7 mph; RH < 31%; Temps > 82°; 1000 hr FM < 13; BI > 50; ERC > 47.

Predicted Indices: BI- 60 (up 9) and ERC- 56 (up 1)

FEEDBACK: Collect WX observations hourly and turn in to FBAN or IMET at end of shift...include fire behavior.

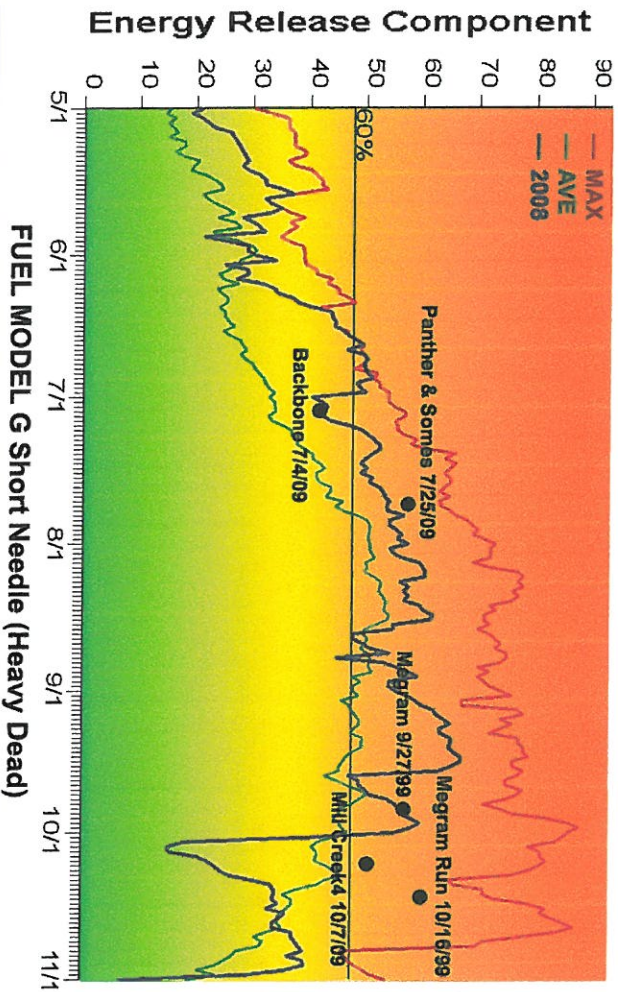

AIR OPERATIONS

Air support may be beneficial with early clearing of the inversion.

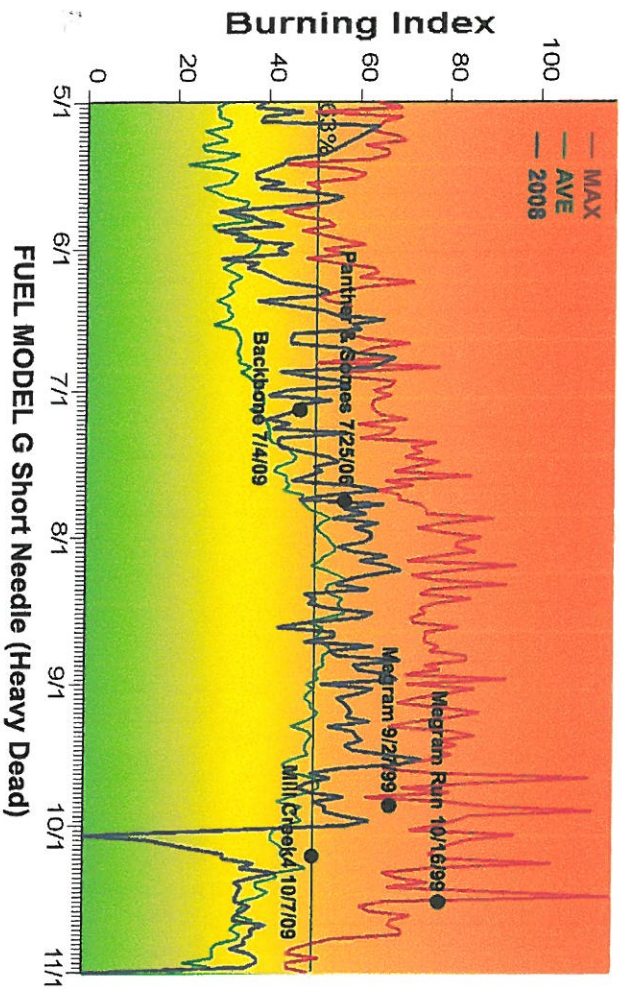

SAFETY.

When developing strategies and tactics, safety zones and escape routes, you should be evaluating potential fire behavior (worst case scenario), not just observed fire behavior.

Fire Danger Rating Areas 112/113/115 Energy Release Component

Fire Danger Rating Areas 112/113/115 Burning Index

- Fire Danger Areas 112/113/115:
- * 112 - Orleans Ranger District
 - * 113 - Hoopa Indian Reservation
 - * 115 - Lower Trinity Ranger District
 - * NW CA - Region 5
- Weather Stations Used:
- * 040404 Brush Mountain
 - * 040408 Hoopa (NFDRS)
 - * 040519 Underwood (NFDRS)

Local Thresholds - WATCHOUT:

Combinations of any of these factors can greatly increase fire behavior: 20' Windspeed over 7 mph; RH less than 31%; Temperature over 82; 1000-hour Fuel Moisture less than 13. Large fires become more frequent when BI exceeds 50 and when ERC exceeds 47.

Graph Interpretation, Energy Release Component:
 Maximum = Highest ERC by day for 1979-2009
 Average = Shows Peak Fire Season
 60% = 60th Percentile means 60% of days observed had an ERC below 47.

PAST EXPERIENCE / LOCAL KNOWLEDGE:

Wildfires become a problem @ 50 acres on the Six Rivers NF due to topography, fuels, and accessibility. ('Large fires'=50 acres)

Large fires become more frequent when 1000 hour fuel moistures drop below 13
 Large fires become more frequent when BI exceeds 50
 Large fires become more frequent when ERC exceeds 47

High severity, past burn areas with heavy snag / dead and down lead to control problems. (Backbone was a result of this, as it started in the Megram fire area of 99)

- * Afternoon winds in the Trinity River Drainage greatly influence fire behavior.
- * Coastal fog observed from the Trinity Valley is a good indicator of strong down canyon winds in side drainages west of the river.

* Klamath River Canyon has very strong up-river winds daily, from the border near Weitchpec to the confluence with the Salmon River. Expect strong winds in the afternoon until sundown. Potential thermal belt up to approx. 2000'.

Graph Interpretation, Burning Index:
 Maximum = Highest BI by day for 1979-2009
 Average = Shows Peak Fire Season
 63% = 63rd Percentile means 63% of all days observed had a BI below 50.

Medical Evacuation of Personnel from Corral Complex attachment.**

ICS 206	9. PREPARED BY (MEDICAL UNIT LEADER)  B. Puckett	10. REVIEWED BY (SAFETY OFFICER)  J. Aragon
----------------	---	---

Medical Evacuation of Personnel from Corral Complex

This fire is burning in very remote, steep and rugged terrain where access is difficult. Southern California Incident Management Team 2 is committed to providing the necessary response should any medical incident occur and to ensure that a rapid and appropriate evacuation is completed. This plan is designed to identify and outline the steps necessary to safely and effectively evacuate an injured firefighter from the Corral Complex and deliver that firefighter to an appropriate medical facility in both daytime and nighttime settings.

Once notification of a medical emergency, and the Division Supervisor and/or EMT's make the decision that a medical evacuation is required, Incident Management Team components will work together to accomplish the evacuation. Medical Unit Leader, Safety Officer, and Air Operations will join the Communications Unit in the communications trailer for a coordinated response. The highest qualified medical personnel on scene shall assume control of patient care. The Division Supervisor shall coordinate the response, and handle communications with incident communication unit and medical unit, and air to ground communications. The Division Supervisor may delegate communications to appropriate resources as needed to facilitate the operation.

Ground Medical Evacuation

- If the injured firefighter is *WITHIN* reasonable hiking distance from a road which can be driven and determined to have a condition which *WILL NOT* be aggravated by driving him/her out, then an incident vehicle shall be utilized to evacuate the injured firefighter from the scene to either the ICP Medical Unit or to a rendezvous point with a ground ambulance. The destination decision shall lie with the DIVS with consultation from the highest level care provider on scene.
- The following ground ambulance providers and locations for ground ambulance coverage for this incident location:

Agency	Base Location	Provider Level	Drive Time to ICP
Hoopa Ambulance (Incident)	As Assigned	Paramedic	Varies
Hoopa Ambulance	Willow Creek, CA	Paramedic	5 minutes
Hoopa Ambulance	Hoopa, CA	Paramedic	30 minutes

Air Medical Evacuation

- If the injured firefighter is *NOT WITHIN* reasonable hiking distance to a road and/or determined to have a condition which *WILL* be aggravated and worsened by driving him/her out, the following aircraft shall be launched based on the closest available resource needed to meet the injured firefighter at the helispot or hoist site. The Division Supervisor will coordinate a hand carry out of the injured firefighter to the helispot/hoist site. The rescue helicopter will evacuate the firefighter to an appropriate location based on medical necessity to rendezvous with ground ambulance, air ambulance, or hospital. Rescue aircraft and locations for this incident are:

Agency	Hoist Capabilities	Medical Capabilities	Base Location	Estimated Flight Time to Incident
H-820	Hoist	Unknown	Redding, CA	40 minutes
CalFire 102	Day Hoist	BLS	Kneeland, CA	25 minutes
CHP H-13	Day/Night Hoist	ALS	Redding, CA	40 minutes
Military Resources	Day/Night Hoist	BLS / Sometimes ALS	Multiple	45+ minutes (+ military call out time)
Assigned incident aviation resources as available	Varies	BLS / Sometimes ALS	Willow Creek Helibase, Additional Others as Available	Varies

- If the injured firefighter requires air ambulance transportation to a hospital, the following helicopters shall be utilized:

Agency	Base Location	Flight time to Incident
Reach 5	Redding, CA	40 Minutes
PHI Air Medical	Redding, CA	40 Minutes

Once lifted, the helicopters will experience an estimated flight time to each of the following facilities:

Hospital	Specialty Center	Location	Helipad	Flight time from Incident
Mercy Medical Center	Level 2 Trauma	Redding, CA	Depends on AC	40 minutes
UC Davis Hospital	Level 1 Trauma and Burn Center	Sacramento, CA	Yes	1.5 hours

James Aragon, SOF2

Health & Safety Message

Incident: Corral Complex	Date/Op Period: 8/17/13 - 8/18/13 06:00-06:00
--------------------------	--

Hazards & Risks

Rolling Material, Snags, Travel to and from the Incident, indirect line working around heavy equipment and possible marijuana plantations:

Keep up **YOUR SITUATIONAL AWARENESS**. Watch for **SNAGS** as they are present throughout the incident. Establish dialogue between resources before engaging. **DRIVE DEFENSIVELY** to and from the incident watch for transports taking heavy equipment to the incident especially on narrow roads. **MARIJUANA PLANTATIONS** may be present if found get location to communications, don't touch anything and leave the area.

Human Factor Barriers to S.A.: Factors that can impair situational awareness and decision making include:

- Low experience level with local factors
- Distractions from primary task
- Fatigue: Both short term and cumulative
- Stress reactions
- Hazardous attitudes

Take time to do a **SELF-CHECK** to ensure you are not being influenced by one of these barriers.

Medical Emergency Plan: REVIEW IT and know it!!

3. SAFETY ZONES AND ESCAPE ROUTES NOT IDENTIFIED

SOF2 James Aragon	
-------------------	--

L. Lookouts C. Communications E. Escape Routes S. Safety Zones
BE MINDFUL

HAZARD TREE – NO WORK ZONES (NWZ)

Hazard Tree Category

Knowing when the exact time a given hazard tree (or compromised section) will fail is an extremely difficult, and is, in many cases, an unpredictable task. Given this fact, we need to manage firefighters' exposure to these hazards by creating a safe work area or NWZ. The size and extent of the NWZ must be determined by onsite conditions, such as terrain, lean, active fire in the tree and adjoining trees.

When an identified hazardous tree cannot be felled, then perform an assessment of which areas have too high a risk, and post a lookout to warn the personnel to stay clear of these areas while working in adjacent areas. If hazard still exists before leaving the area, flag the NWZ so that personnel entering the area will be able to recognize the hazard. Use the following failure zone illustrations as examples to help manage firefighter exposure to these identified hazards. Also remember to include the possibility of the "Domino Effect" to surrounding trees.

#1 – $1\frac{1}{2} X$ Height of snag

#2 – $1\frac{1}{2} X$ trunk-to-branch-tip distance

#3 – $1\frac{1}{2} X$ length of dead top.
