INCIDENT Weather Forecast

FORECAST NO: 14

PREDICTION FOR: Thursday

SHIFT DATE: 08/29/2013 0600-2000

TIME AND DATE

FORECAST ISSUED: 08/28/2013 1900

NAME OF FIRE: Corral Complex

SHIFT Day UNIT: CA-SRF

SIGNED: Ryan Leach (T)/Jeff Tonkin

Incident Meteorologist

<u>WEATHER DISCUSSION</u>: The air mass over the fire will remain stable as a weather system moving north of the area pushes more maritime air into the area this afternoon and evening. Dew points will rise quickly this afternoon and evening across the fire, causing a rapid increase in humidity. Winds continue from the northwest but stronger due to the system passing to the north of the fire.

WEATHER FORECAST (TODAY):

WEATHER: Areas of smoke. Partly Cloudy.

WEATHER SUMMARY

(Refer to Weather Forecast for details) DAY: Partly cloudy. Max Temp: 70-85°. Min RH: 32-38%. Slope/Valley – Upslope 3-4 mph, Ridges – West/Northwest 5-7 mph with gusts to 12 mph.

NIGHT: Partly cloudy. Min Temp: 51-55° Max RH: 45-85% Winds: N to NE 6-8 mph ridges, gusts to 14 mph.

FUELS

Fire is burning within the boundaries of the Megram Fire (1999) and Back Bone Fire (2009). Fuels consist of abundant heavy dead and down, snags and shrubs (Ceanothus/Snow Brush). Mature timber on the west flank. Live FMC lower on S/SE/W aspects. Live and dead fuel moistures noticeably higher in the drainages below 4000ft elevation. Minimum fine fuel moisture: 6-10%, 1000 hour FMC: 10-14%, Live fuel moisture: 80-100%.

OUTPUTS - FIRE BEHAVIOR

Forecasted Indices (Big Hill RAWS) ERC: 47 (Down 4) BI: 52 (Unchanged)
Thresholds for Active Fire Behavior in the Corral Complex area:
20ft Winds > 7 mph. RH < 31%. Temperature > 82°. 1000hr FMC < 13%. BI > 50. ERC > 47.

- GENERAL: Yesterdays fire spread was minimal with the minimum RH remaining above 40% across most of the fire area. Today's fire behavior potential will be slightly less as a result of the slightly higher relative humidity and cloud cover. There is a potential for low to moderate spread rates and fire behavior across the higher elevations and east of the crest. Fire behavior at the lower elevations and west of the crest will be generally low. Most fire behavior will be backing and flanking at ½ ch/hr. or less.
- **DIV F & H (W Flank, Tish Tang Ridge area)** Expect the fire to spread very slowly to the west and back off the ridge to the north and south of the South Fork Tish Tang Ck. Rollout will not likely result in any rapid upslope runs. Heavy fuels continue to smolder and consume.
- **DIV L (NW Flank, Tish Tang Point area)** Expect low spread to the NW towards and around Tish Tang Point. Suppression efforts on the spot fire in the bottom of Tish Tang Ck should keep that fire in check. Rollout will not likely result in any rapid upslope runs. Heavy fuels continue to smolder.
- **DIV M & P (NE Flank, Trinity GS/H-2 area)** This edge is largely cold, especially inside the Backbone Fire footprint from 2009. Spot fire east of the crest is not showing IR heat, but don't bet on that, keep a close eye for this area for signs of heat in the heavies.
- **DIV R & W (E/SE Flank, South of Grizzly Camp)** This is a problematic area with heat and a high potential for rollout. Fire spread potential is fairly low but until the heavy fuels finish burning, it remains. The greatest fire activity will likely occur in the early morning hours if the RH drop below 40% and the winds get gusty.
- **DIV X & A (Horse Linto Ck area)** Fire is established in Horse Linto Ck. There is a slight potential of the fire making a slope reversal and heading upslope to the ridge top to the south, but rates of spread will stay low, unless torching brush provides a source of spotting. Pay very close attention to the fire south of Horse Linto Creek, due to the heavy dead & down fuel loading.

Maximum Fire Behavior (head fire upslope): Rate of Spread: 10-12 chains/hour (12 ft/min), Flame Length: 4-6 ft. Probability of Ignition: 50-60%. Maximum spotting distance of 2000 feet.

AIR OPERATIONS

Potential for a mild inversion in the morning breaking between 1100 and noon. Plan accordingly.

SAFETY

- Don't get complacent after multiple days with low fire behavior. Other dangers exist, besides fire behavior.
- Small opportunities are often the beginning of great enterprises. -Demosthenes (384 BC 322 BC)

Construct contingen	cy line from Div	7/Y hr	eak to DP1					

All resources report to the wash station upon arrival and demobilization.

BEARS- Don't leave your food unattended at any time of day to reduce availability to bears. Store your food at least 100 feet away from your sleeping area. The food stash should be downwind of your site, where possible. Keep vehicle windows closed when storing food inside.

CORRAL COMPLEX SAFETY MESSAGE

08/29/2013 0600-1800

- ✓ We are most vulnerable to accidents and errors when the operational tempo is changing, especially when it changes quickly.
- ✓ Maintaining good situation awareness in spite of change in operational tempo represents a considerable challenge.
- ✓ What is "situation awareness", how can you get it and keep it, and what are some of the barriers to achieving it?
 - ✓ Fatigue: Maintain good physical fitness and get adequate rest and nutrition.
 - ✓ Complacency: There is no such thing as a "routine fire". Complacency kills.
 - ✓ Poor crew cohesion: Build your team all season long
 - ✓ Lack of communication: 5 Communication responsibilities on page IX of the IRPG

Defined:

The perception of elements in the environment within a volume of time and space, the comprehension of their meaning, and the projection of their status in the near future.

The degree of accuracy by which one's perception of his/her current environment mirrors reality

Situational Awareness = SA = Staying Alive

Safety Officers: Marty Hamel & Brian Savage

When an injury occurs, initiate care with available resources at scene and notify DIVS. The DIVS shall coordinate the incident and direct necessary actions. The following steps shall be taken to mitigate the incident:

Willow Creek, CA

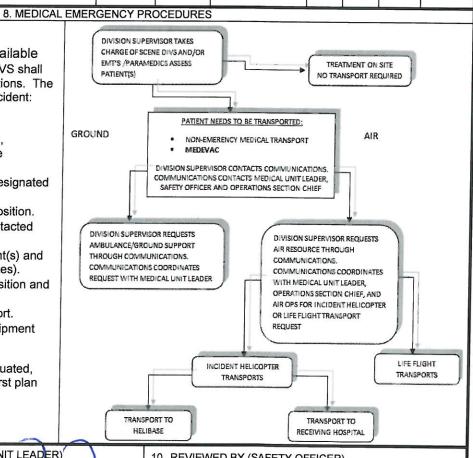

Determine the nature of the emergency.

Health Center (Clinic) **Mad River Community**

Hospital (Clinic)

- 2. If the emergency is a medical injury/illness, determine if the injury/illness is life threatening.
- If the injury is life threatening, then clear designated frequency for emergency traffic.
- Identify the on-scene point of contact by position.
- Ensure that the Medical Unit Leader is contacted immediately.
- Identify number injured, patient assessment(s) and location (geographic and/or GPS coordinates).
- 7. Identify on-scene medical personnel by position and last name (i.e. EMT Jones).
- Identify preferred method of patient transport.
- Determine any additional resources or equipment

The Evacuation Plan should be continually evaluated, and contingencies developed in the event the first plan is not effective.
