FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 3

TYPE OF FIRE: Wildland Fire

FIRE NAME: Dance

OPERATIONAL PERIOD: 0600 – 1800 August 1, 2013

DATE ISSUED: July 31, 2013

TIME ISSUED: 2030

UNIT: Six Rivers NF, Orleans RD

SIGNED: /s/ Taro Pusina FBAN (t)

INPUTS

WEATHER SUMMARY: *See attached Spot Weather Forecast*

An upper level trough will keep temperatures cooler than normal. Mostly sunny with areas of haze and smoke in the morning hours. As the trough passes, light northeast winds are expected beginning late Thursday evening into Friday. High pressure rebuilds into the weekend with warmer temperatures resuming.

Sky/Weather: Mostly sunny and slightly cooler than normal.

Max Temp: 87°

Min RH: 24%

Winds:

Eye level - upslope/upcanyon 1 - 3 mph, becoming southwest 4 - 6 in the afternoon.

Ridge - west 5 mph, increasing to 7 – 10 with gusts to 15 in the afternoon.

FIRE BEHAVIOR

GENERAL:

The area is experiencing near record dryness, escapes across containment lines could result in very high to extreme fire behavior. (see ERC chart)

The overall fire behavior will be low to moderate. Interior pockets will continue to smolder and burn themselves out. Small islands may flare up with isolated, single tree or group tree torching.

Should the fire jump the line at the head in Division M, fire behavior in hardwoods and conifer will be moderate to high with a flame lengths of 4 - 8' and rate a spread of 10 – 15 chains/hour. Escapes in division B and A would initially result in a backing or flanking fire with slightly less intensity and lower rates of spread.

Probability of ignition during in the afternoon is 60% in shaded fuels and 70% in unshaded fuels.

Torching trees could result in spotfires up to ¼ mile.

AIR OPERATIONS

Smoky conditions may exist in early morning hours.

08/01 Sunrise - 06:09

08/01 Sunset – 20:30

SAFETY

Watch for rolling debris across firelines on steep, uneven terrain. Flare-ups near the line can occur in heavy concentrations of unburned live and dead fuel. Watch for fire weakened live and dead trees near firelines in Divisions A, B and M. There is also some reburn potential particularly in partially burned drainages and riparian areas.

What Happens When You Get It:

Once urushiol touches the skin, it begins to penetrate in minutes. It is completely bound to the skin within 8 hours. Urushiol is the oil inside the plant that caused the allergic reaction to 70% of the population

You may develop any or all of the following:

- Red Rash
- Blisters
- Swelling

What To Do When You Get It:

Stop the symptoms before they start. If you know you've been exposed, cleanse the area immediately with plain soap and water to remove urushiol before it has a chance to bind to the skin. To remove the oil from your skin, scrub the area for several minutes, but do not break the skin, then rinse with cool water for several minutes. Once the area has been cleansed you may need to apply a topic ointment or further medical treatment.

Time of Washing After Exposure	Extent of Removal of Poison Ivy Oil (%)
Immediately	100
10 min	50
15 min	25
30 min	10
60 min	None

Be sure to wash all clothing that you were wearing at time of exposure. Wash any bedding that you may have slept on as you can spread the oil from your skin or clothing to other parts of your body or to others.

Products That Help Remove Urushiol From the Skin:

- Tecnu
- Tecnu Extreme
- Zanfel
- Poison Oak Soap
- Cortaid Poison Cleanser
- Dawn Dishwashing Liquid

Oral medications that provide relief include:

- and if indicated:
- Claritin
 - Chlorpheniramine (causes drowsiness)
 - Antihistamines Benadryl (causes drowsiness)
 - Injected Medication (Depo-Medrol)
 - Pepsid 40mg a day
 - Zyrtec Normal daily dose

Topical treatments for the rash include:

- RhuliGel
- Cortaid
- Hydrocortisone Cream or Gel
- Calamine Lotion
- Caladryl Lotion
- Benadryl Cream
- Karuk Tribe Medical Clinic in Orleans Exam
- Injections and Oral Medication (Prednisone)

“TAKE YOUR TIME TO DO IT SAFELY”

- Use time wisely to focus on safety issues, there is NOTHING that is more important.
- Do not let a sense of urgency, or the hazardous mindsets of “impulsiveness” or “mission fixation” compromise your safety.
- Any time spent planning for safety will pay dividends in the end

Hazard Tree Felling

Felling a hazard tree requires accurate risk assessment and complexity analysis, and demands the sawyer’s full situational awareness. In all cases, remember to establish and maintain a secure felling area.

Do not bypass hazard trees without taking some action such as felling or establishing a No-Work-Zone.

Degree of hazard varies with tree size, species, and type/location of defect:

- Stem defects resulting in tree failure
- Weakened sapwood resulting in loss of control when falling trees and limits solid wood for wedging.
- Overhead hazards, i.e. , dead or hanging limbs falling on the faller.

Look Up, Look Down, Look Around During Mop Up

***Look Up:** Check the sky for any weather changes such as building or approaching thunderstorms, wind shifts or increasing in speed. Watch for air operations and water drops. Look for snags and the potential for rolling material.

***Look Down:** Watch your footing. Keep an eye out for snakes, bee’s nests, Stump holes, and ash pits.

*** Look Around** Check for flagging identifying hazards in the area, and general terrain features. Keep an eye on fellow firefighters for signs of heat stress and fatigue.

INCIDENT RISK ANALYSIS (ICS 215A) Day Shift

DIV	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES	
ALL	HAZARD TREES/SNAGS	<ul style="list-style-type: none"> • Follow Hazard Tree Safety Guidelines (IRPG p. 20). • Limit number of personnel around snags and their exposure time; fallers must be qualified for trees being fallen. • Be especially alert around snags during wind events or changing wind direction. • Maintain Situational Awareness. 	
ALL	DRIVING HAZARDS	<ul style="list-style-type: none"> • Narrow dusty roads exist. • Establish one way traffic or coordinate traffic flow if necessary. • Drive defensively! Expect the unexpected around every curve. • Drive with headlights on; use chock blocks, keep windshields clean; look before backing; and use backers whenever available. • Don't drive when fatigued. Adhere to agency driving regulations and guidelines. • Use care when traveling on Highway 96. 	
ALL	HYDRATION	<ul style="list-style-type: none"> • Drinking water before, during and after shifts, up to 1.5 gal. per shift. • Be alert for signs of heat illness in yourself and others. • Drink 2 to 1 water to sports drinks. 	
ALL	ENVIRONMENTAL HAZARDS	<ul style="list-style-type: none"> • Be alert for snakes, watch footing and hand placement around rocks. • Protect exposed skin from contact with poison oak, avoid smoke from burning poison oak if possible. • Treat exposure of poison oak with Zanfel or Tecneu. • See the medical unit for treatment. 	
ALL	EXTREAMLY STEEP TERRAIN AND ROLLING MATERIAL	<ul style="list-style-type: none"> • Watch your footing; take your time. • Ensure adequate spacing between crewmembers. • Post lookouts to warn of rolling debris. 	
ALL	MARIJUANA PLANTATIONS	<ul style="list-style-type: none"> • Maintain situational awareness. • Watch for open areas and sign of improvement or irrigation systems. • Be aware of evidence that cultivation has occurred in the area. • If you stumble upon an area with probable cultivation be extremely cautious, exit on the same route you arrived and notify supervisor immediately. 	
ALL	MOP UP OPERATIONS	<ul style="list-style-type: none"> • Conduct thorough briefing for all personnel (inside rear cover IRPG). • Use all required PPE, including eye protection. • Maintain proper spacing and overhead clearance. • Be alert for stump holes, root cavities, and ash pits. • Minimize exposure to smoke, and rotate personnel into clean air when practical. • Evaluate unburned islands/Increase situational awareness. 	
DIV A, Z	WORKING AROUND STRUCTURES	<ul style="list-style-type: none"> • Be respectful when working near residences. • Complete task in timely manner and move on. • Keep noise at a minimum. 	
ALL	AIRCRAFT OPERATIONS	<ul style="list-style-type: none"> • Keep personnel out of drop zones when bucket work in progress. • Use air-to-ground frequency to communicate with aircraft. • Use clear, concise statements when directing aircraft. Use clock directions from pilot's perspective.
