FIRE BEHAVIOR FORECAST

FORECAST NUMBER: Butler - 3, Dance - 7

TYPE OF FIRE: Wildland Fire

FIRE NAMES: Butler and Dance

OPERATIONAL PERIOD: 0600 - 1800, August 3, 2013

DATE ISSUED: August 2, 2013

INPUTS

WEATHER SUMMARY: *See attached Incident Meteorological Forecast*

Discussion:

High pressure will gradually build back into the region through the weekend with rising temperatures and lowering RH's. Winds will generally remain light and terrain driven. Expect inversion to keep smoke in valley bottoms during morning hours.

Weather: Sunny with smoke during morning hours

Max Temp: 88°

Min RH: 16%

Winds:

Eye level: Downslope/northeast 2 – 4 w/gusts to 6 until 1000, then upslope/west 3 – 6 increasing 6 – 8 w/gusts to 15 after 1400

FIRE BEHAVIOR

GENERAL:

ERC of 63 is at the 97th percentile. Potential for very high to extreme fire behavior.

Butler: Fire will burn with moderate to high intensity during the burn period. Rollout, flanking and short duration runs upslope can be expected. Single and group tree torching are likely.

Divisions A, E, H: Watch for slope reversal as fire spreads south across Lewis Creek. Rollout with subsequent runs up the Lewis Creek drainage are expected. Headfire flame lengths will reach 4 – 8' with rates of spread up to 10 – 15 chains per hour. Single and group tree torching can result in spotting distances of ¼ - ½ mile with a 60% probability of ignition during the burn period.

Divisions K, T, W, Z: Flanking to the north will result in rollout and runs west and upslope toward the Butler Mountain ridge. Flame lengths will be 3 – 6' with a rate of spread 5 – 10 chains per hour. Single and group tree torching will result in spotting distances of ¼ - ½ mile with probability of ignition at 60%. Fire will also continue to back north from the Butler Mountain ridge into the Grant Creek drainage. Expect low to moderate fire behavior with 1 – 3' flame lengths and a ROS of 2 - 4 chains per hour.

Dance: 300' mop-up has significantly reduced fire activity. Small Interior pockets, stump holes and heavy logs will continue to smolder and burn themselves out. An escape to the north in Divisions B or M would result in headfire with flame lengths of 1 – 4' and a rate of spread of 4 – 6 chains per hour. Isolated torching would result in spotting up to ¼ mile with a 60% probability of ignition.

AIR OPERATIONS

Morning inversion will create smoky conditions in valley bottoms.

08/03 Sunrise – 06:11

08/03 Sunset – 20:28

SAFETY

- Watch for rolling material igniting unburned vegetation below.
- Expect fire behavior to increase as inversion lifts.
- Rates of spread and fire behavior will increase in steep chutes and narrow canyons, particularly when wind, aspect and terrain features are in alignment.
- Be aware of slope reversal in drainage bottoms and subsequent rapid rates of spread.
