

INCIDENT ACTION PLAN

AMERICAN INCIDENT

CA-TNF-001562
P5HU11 (0517)

Sunday - Sunday

OPERATIONAL PERIOD

**Sunday, August 25, 2013
DAY 0600 - 1800 Hours**

INCIDENT OBJECTIVES	1. Incident Name AMERICAN	2. Date Prepared 08/24/2013	3. Time Prepared 1730
----------------------------	-------------------------------------	--------------------------------	--------------------------

4. Operational Period
DAY 08/25/2013 0600 - 1800 HOURS

5. Objectives for the Incident (include alternatives)
Management Objectives:
1. Ensure firefighter, aviation and public safety through clear, concise direction and prioritization of work assignments.
 2. Maintain a high level of collaboration with local communities, neighboring and cooperating agencies.
 3. Provide timely and accurate fire information updates to the public, partners, and the community.
 4. Minimize resource loss, impact, and damage to the greatest extent possible on private lands and sensitive areas.
 5. Protect public and private infrastructure and other resources under special use permit or contract.
 6. Minimize resource damage to natural, wilderness, and threatened & endangered habitat, and cultural resource values. Execute suppression action where it does not compromise firefighter safety.
 7. Initiate suppression repair action where possible per specifications and direction from the Resource Advisor.

Control Objectives -- Keep the Fire:

North of Road 96 (Mosquito Ridge)
 East of current containment lines
 South of North Fork of the American River
 West of Road 43 and Road 96

6. Weather Forecast for Period

WEATHER: Partly Cloudy with some middle and high clouds.
MAX TEMPERATURES: 68-79 above 5500 feet. 79-85 below 5500 feet.
MIN HUMIDITY: 20-30%.
20 FT WINDS:

RIDGETOP – 0600-1200: East 5-15 MPH. Gust 20 MPH Little Bald Mountain.
 1200-1800: South to Southwest 12-18 Gust 28 MPH, except Gust 35 MPH Little Bald Mountain.

SLOPE/VALLEY– 0600-1000: Downslope/downvalley 3-6 MPH.
 1000-1800: Southwest 10-15 MPH Gust 25 MPH.

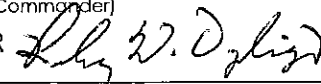

STABILITY/INVERSION: Inversion around 500 feet AGL...dissipating around 1100L.

6. General Safety and Risk Management Message

Smoke and Fatigue: Monitor personnel for smoke exposure. Attempt to rotate fire personnel out of smoke. Get adequate rest, drink additional water and eat snacks.

INCIDENT Weather Forecast

FORECAST NO: 20
PREDICTION FOR: Day Shift
SHIFT DATE: 8/25/13 (0600-1800)
TIME AND DATE FORECAST ISSUED: 8/24/13 @ 2030

NAME OF FIRE: American
UNIT: USFS (TNF)
SIGNED: *[Signature]*
 Richard Thompson/Shad Keene (T)
Incident Meteorologist

WEATHER DISCUSSION: An upper trough will push into California today and bring very gusty winds to the fire. **Southwest winds will be stronger than yesterday.** Humidities will be similar to yesterday and temperatures will cool further by a few degrees.

Weather Forecast for Sunday:

WEATHER: Partly Cloudy with some middle and high clouds.
MAX TEMPERATURES: 68-79 above 5500 feet. 79-85 below 5500 feet.
MIN HUMIDITY: 20-30%.
20 FT WINDS:
RIDGETOP – 0600-1200: East 5-15 MPH. Gust 20 MPH Little Bald Mountain.
 1200-1800: South to Southwest 12-18 Gust 28 MPH, except Gust 35 MPH Little Bald Mountain.
SLOPE/VALLEY– 0600-1000: Downslope/downvalley 3-6 MPH.
 1000-1800: Southwest 10-15 MPH Gust 25 MPH.

STABILITY/INVERSION: Inversion around 500 feet AGL...dissipating around 1100L.

Weather for Sunday Night: Mostly Clear.

MIN TEMPERATURES: 50-55 above 5500 feet. 55-60 below 5500 feet.
MAX HUMIDITY: Ridges/Upper slopes: 50%.
 Middle and Lower Slopes/Valleys: 50-60%.
20 FT WINDS:
RIDGETOP – 1800-2100: Southwest to west 10-15 MPH Gust 25 MPH.
 2100-0600: Northeast to East 5-15 MPH. Gusts to 25 MPH Little Bald Mountain.
SLOPE/VALLEY– 1800-2100: Southwest to west 6-12 MPH Gust 18 MPH.
 2100-0600: Downslope/downvalley 3-6 MPH.

Extended Forecast: A warming and drying trend will begin on Monday, and winds are expected to trend lower. A mostly persistent weather pattern is expected early this week. No major weather systems or thunderstorms are expected to affect the fire through at least the middle of the week.

OUTPUTS

FIRE BEHAVIOR

GENERAL: Active Burn Period seems to begin around 1600 hrs. Fire will continue to move through the surface fuels at slow to moderate rates of spread. Surface fuels can promote transition to crowns with single and group tree torching. Short crown runs are possible where fuels, topography and winds align. Rollouts and spotting can be a problem contributing to the spread of the fire. Observed spotting has been up to 1/3 mile. Anticipate increased spotting distance with winds above 30mph.

Local Thresholds – Watch Out: Combinations of any of these factors can greatly increase fire behavior.

20' wind Speed over 5 mph, RH less than 20%, Temperature over 80°, 10hr Fuel Moisture less than 4.

Fire Spread in the absence of wind is associated with fuel and topography. Short range spotting up to 1/3 mi.

Active burn period associated with solar heating.

Unshaded: Fine dead Fuel Moisture: 4-6% Probability of Ignition: 50-80%

Shaded: Fine dead Fuel Moisture: 7-9% Probability of Ignition: 30-50%

SPECIFIC:

BRANCH I

Div-B Fire behavior limited to interior isolated heat in larger fuels.

Div-F Morning (0600-1200 hrs) East winds are forecasted to be stronger, Wind testing the lines. Fire behavior should remain interior as larger fuels are consumed.

BRANCH II

Div-H: Morning (0600-1200 hrs) East winds are forecasted to be stronger, Wind testing the lines. Fire behavior should remain interior as larger fuels are consumed. Anticipate increased spread rates in the lighter fuels associated with the old burn area.

Div-R The fire will continue to move north east in Cliff Canyon. Fuel continuity in the canyon is broken up by rock cliffs and scree slopes slowing rates of spread. Fire will primarily burn through surface fuels with single/group tree torching possible.

Div- T The fire is currently established on Cavanah Ridge above Deep Canyon. Roll out into the canyon may promote fire spread. Deep Canyon may be subject to increased up-slope/canyon winds promoting rapid rates of spread, short crown runs and increase spotting distance.

BRANCH III

Div-Z: Fire currently established in the lower portion of Deep Canyon is burning in the confluences of Little Grizzley and Bear Trap Canyons. These features may cause winds to eddy along the ridges and in the canyons. Anticipate altered wind direction in this area. The fire continues to creep in surface fuels. Very steep terrain is subject to roll out along with short crown runs and increase spotting.

Div-A: Fire behavior limited to interior isolated heat in larger fuels.

AIR OPERATIONS: Visibility may be compromised by smoke due to morning inversion 500. Expected to dissipate late morning.

SAFETY

Lookout Points: Roll out... Fire coming into alignment with canyon and drainages... Increased winds promoting rapid rates of spread and increased fire behavior... Maintain L.C.E.S.

7. Control Operations
Continue to patrol and mop up 300 feet in from the perimeter.

8. Special Instructions
All personnel need to be aware of aerial firing that may occur in Divisions R, T and A / Z.
 Use only designated water sources marked by blue flagging. Avoid traveling through noxious weeds identified with flagging. Avoid sensitive areas marked with white/orange polka-dot flagging. Watch for open mine shafts in your work area. Backhaul any excess equipment to Base Camp. Continue to reassess structures located within the fire perimeter to ensure the area is secure. SOFR Schmidt and SOFR Ludke are assigned to Division H and Suppression Repair Group.

7. Control Operations Continue firing operations (if it is not complete) from the Div R / T break south to the Div T / Z break. Hold and begin mop up operations to secure the fire perimeter.							
8. Special Instructions All personnel need to be aware of aerial firing that may occur in Divisions R, T, and A / Z. Use only designated water sources marked by blue flagging. Avoid traveling through noxious weeds identified with flagging. Avoid sensitive areas marked with white/orange polka-dot flagging. Watch for open mine shafts in your work area. Back haul any excess equipment to Base Camp. Continue to reassess structures located within the fire perimeter to ensure the area is secure. SOFR Morlock and Fetherston are assigned to Divisions R / T.

Denise Blankenship

AIR OPERATIONS SUMMARY (ICS-220)

PREPARED BY: Denise Blankenship, AOB
 PREPARED DATE/TIME: 08/24/13 2000

2. OPERATIONAL PERIOD DATE: August 25, 2013

1. INCIDENT NAME:

American
 CA-TNF-001562 P5HU11 (0517)
 START TIME: 0600
 END TIME: 1800

SUNRISE: 0627
 SUNSET: 1946

3. REMARKS

PILOTS:

- Check flight hazard maps before flying in new divisions. Hazards – power lines, towers, MTRs and MOAs
- Fly all missions with landing lights on.
- Document amount H2O dropped.
- Make sure you have positive air to ground contact before dropping water.
- Be alert to high winds, and turbulence and outflow winds.
- Maintain clear communications with both air and ground forces.

CREWS:

- CAUTION: Both live and dead trees are unstable and fall in high winds and water drops. For safety, monitor air to ground and stay clear from drops zones, and aircraft approaches and departures
- LONGLINE CARGO ORDERS – Divisions contact American Communications to order Cargo deliveries for the line. Orders need to include: Division, Ground Contact, Date & Time needed, Lat/Long for drop

4. MEDEVAC A/C:

Refer to
 ICS206 Medical Plan
 for specifics

5. TFR: 3/0489 (A-86)

American – Safety Message

INCIDENT: # CA-TNF-001562

DATE: 08-25-13

TIME: 0600 – 1800 Day

Situational Awareness

The 1st step in the Risk Management Process. **The 10 Standards Fire Orders, 18 Watch-Outs and LCES**, are the bare minimum safety precautions.

Go into your areas today with a **fresh set of eyes**. Do not allow yourself to become complacent because operations have been successful for several days. Whether it is burnout, vehicle or equipment use, mop-up or rehab, ask yourself

“Are my actions achieving today’s objectives?”

If not re-evaluate your plan. Keep an eye on other personnel; it is **EVERYONE’S** responsibility to stop an unsafe act

Firing Operations

Have a firing operations plan in place. Brief all resources in firing operations, have firing teams and holding resources identified.

- **Post adequate Lookouts and ensure solid communications.**
- Have a good starting and ending point for firing.
- Hazards: Drip Torch Fuel, Firing Devices and Projectiles.
- Wear and use all PPE.
- **Know what your fire is doing at all times.**
- **Ensure adequate egress for potential escape routes.**

Driving

- When driving keep speed at or below the posted speed limit and your headlights on.
- **Stay as far to the right of the road as is safely possible.**
- During shift change keep your speed at or below the posted speed limit.
- Schools back in session, watch for school busses and children at bus stops.
- Always fasten your seat belt before the vehicle is set into motion.
- Don’t tail gate.
- Slow down, slow down, slow down.

There are three main types of distracted driving: **Visual**-taking your eyes off the road; **Manual**-taking your hands off the wheel; **Cognitive**-taking your mind away from the task at hand. Don’t drive distracted!

Team #4 Safety Group

Hazard Trees

Situational Awareness: Survey your work area for hazard trees (green or black) early in the shift. The longer an area has been burned, increases probability for undermined trees.

Decision Making: Only go as deep as necessary during mop up to reduce hazards.

Flag, Avoid and Notify: Flag any identified hazard trees and notify your supervisor and any potentially impacted fire personnel.

Be alert for changing conditions: High wind increases the hazard. Avoid working under burned trees if winds increase appreciably.

Make a plan: Make your plan to reposition to a more secure area if wind conditions dictate **PRIOR** to the need arising. Don’t wait until the last minute to prepare and execute the plan.

INCIDENT RISK ANALYSIS (ICS 215a)

DIV	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL	HAZARD TREES	<ul style="list-style-type: none"> • Follow Hazard Tree Safety Guidelines (IRPG p.20). • Limit number of personnel around snags and their exposure time; fallers must be qualified for trees being fallen. • Be especially alert around snags during wind events. • Check for hazard trees & "widow-makers" in sleeping areas prior to occupancy. • Night time complicates hazard tree identification
ALL	DRIVING HAZARDS	<ul style="list-style-type: none"> • Drive defensively! Expect the unexpected around every curve. • Drive with headlights on; use chock blocks, keep windshields clean; look before backing; and use backers whenever available. • Watch for debris on the roads. • Increase following distances on dusty roads. Slow down when you meet opposing traffic or encounter washboard surfaces. • Monitor drivers fatigue due to long driving distances.. • Speeds vary, monitor posted speed limits.
ALL	FIRE BEHAVIOR	<ul style="list-style-type: none"> • Long Range Spotting has greatly increased Fire behavior, plan for increased ROS • Review "Severe Fire Behavior Potential" (IRPG p.78). • Monitor current weather conditions and forecasts. Make sure all personnel receive thorough briefings every shift. • Maintain adequate escape routes and safety zones. Advise all personnel if these are compromised or changed. Set trigger points when appropriate. • Adhere to 10 Std Orders, mitigate 18 situations. • Maintain Situational Awareness. LCES in place always.
ALL	FATIGUE	<ul style="list-style-type: none"> • Be alert for signs of fatigue and take breaks as necessary. • Maintain 2:1 work/rest ratio. • Monitor incoming resources for level of fatigue.
ALL	HYDRATION	<ul style="list-style-type: none"> • Drinking water before, during and after shifts, up to 1.5 gal. per shift. • Be alert for signs of heat stress in yourself and others.
ALL	AIRCRAFT OPERATIONS	<ul style="list-style-type: none"> • Keep personnel out of drop zones. • Use air-to-ground frequency to communicate with aircraft. • Use clear, concise statements when directing aircraft. Use clock directions from pilot's perspective. • Don't engage in "heli-mopping". Eliminate unnecessary pilot exposure.
ALL	LINE CONSTRUCTION	<ul style="list-style-type: none"> • Conduct thorough briefing for all personnel (inside rear cover IRPG). • Ensure LCES in place prior to engagement (IRPG p. 6). • Establish adequate safety zones (IRPG p.7). • Use Downhill Line Checklist (IRPG p. 8). • Follow "Look Up, Look Down, Look Around" procedures (IRPG p. 2-3). • Utilize Risk Management Process (IRPG p.1).
ALL	SUPPRESSION REPAIR	<ul style="list-style-type: none"> • Brief crews with Job Hazard Analysis (JHA) provided by Safety prior to beginning work with brush chippers. • All workers involved in the operation must initial JHA after tailgate briefing. • Ensure only qualified chipper operators run the equipment. • Adhere to all abatement actions identified in JHA • Turn in initialed JHA to Safety at the end of shift.

ALL	INITIAL ATTACK	<ul style="list-style-type: none"> • Do the Risk Management process prior to any engagement • LCES will be in place during any operation. • This country requires you to LOOK UP, LOOK DOWN AND AROUND. • The weather can change instantly, always be observant. • Base all actions on current and expected fire behavior 	
Branch II & III	BURNING OPERATIONS (Remember to Keep Air Attack involved in all your operations)	<ul style="list-style-type: none"> • Conduct thorough briefing for all personnel involved (inside rear cover IRPG). • All personnel to be fully qualified for their assignments. Trainees must have qualified trainers. • Utilize Risk Mgmt. Process (IRPG p. 1) for implementing plan. • Required PPE to be worn by all personnel involved. LCES must be established prior to implementing burning operations (IRPG p. 6). 	
	MINE SHAFTS	<ul style="list-style-type: none"> • Conduct thorough briefing for all personnel (inside rear cover IRPG). • Avoid all mine shafts and adits • Three Stripes You're Out: 3 Stripes of flagging tape means STAY OUT!

John Kerley SOF 2 (T)

ICS 206 – Block 8, Emergency Medical Procedures (cont'd)

In the event of a medical emergency provide the following information to the Communications Unit

1. Declare the nature of the emergency.
 - a. Medical injury/illness? If injury/illness is it Life Threatening?
2. If Life Threatening, then request that the designated frequency be cleared for emergency traffic.
3. Identify the on-scene Point of Contact (POC) by Resource and Last name (i.e. POC is TFLD Smith).
4. Identify nature of incident, number injured, patient assessments and location (geographic and GPS coordinates).
5. Identify on-scene medical personnel by position and name (i.e. EMT Jones).
6. Identify preferred method of patient transport.
7. Request any additional resources and/or equipment needed.
8. Document all information received and transmitted on the radio or phone.
9. Identify any changes in the on-scene Point of Contact or medical personnel as they occur.

Selecting an On-Scene LZ

First, determine if the area is large enough to land. The landing surface should be flat, firm, and free of debris that could blow into the rotor system.

The touchdown area for the helicopter should be 125' x 125'.

The landing site should be clear of people, vehicles, trees, poles, wires, posts, stumps, brush, and large rocks.

Consider the wind direction. Helicopters land and take off into the wind.

Touchdown area should be marked, (an X to mark the center and one indicating wind direction).

If possible, wet landing area down to minimize blowing dust.

Radio Terminology

“Medivac” is for life threatening injuries only.
“Medical Transport” is for non-life threatening injuries.

STANDARD OPERATING PROCEDURES—FINANCE SECTION
“How to Earn an Honest Day’s Pay for an Honest Day’s Work”
16 HOURS IS NOT A GUARANTEE – YOU HAVE TO EARN IT!!

WORK REST CYCLE

IT IS NATIONAL DIRECTION TO MEET A 2 TO 1 WORK/REST RATIO (1 hour of sleep/rest for every 2 hours of work). Every effort shall be made to manage work hours so you don’t exceed the maximum of 16 hrs. Work hours exceeding 16 hrs shall be approved by your supervisor in advance, and a justification/mitigation form completed for review by Section Chief & approved by IC. It is each person’s responsibility to comply with this direction to manage for fatigue and safety.

OPERATIONAL SHIFTS

Pay status for assigned overhead and crews on the fireline will not start prior to the posted briefing time and will terminate on arrival back in camp (except for debriefing—additional hours may be accrued by those required to attend debriefing). Supervisors will be allowed ½ hour prior to briefing and after return to camp to ready crew and equipment.

DUTY STATUS

Division/Group supervisors and Unit Leaders are responsible for establishing on and off duty status. The objective is a 2 to 1 work/rest ratio. Personnel will normally work, travel, and/or be placed on ORDERED standby 8 to 16 hours per day and be off duty 8 hours or more (breaks count towards 8 hrs). Off duty time will be in a non-pay status. Each federal employee is guaranteed **at least 8 hours** of pay status each 24-hour period (midnight to midnight) unless it is the first or last day of an assignment or stated otherwise in a contract or agreement.

PERSONNEL/EQUIPMENT TIME REPORTING

Personnel time will be reported to the Time Unit and daily once they are signed by the next level supervisor. Local Government Resources hired under CFAA or Local Agreement w/Forest are also required to submit a Crew Time Report daily. OES resources will be monitored by OES Agency Rep (if assigned) for 2/1 Work Rest compliance. Situations entitling you to HAZARD PAY are to be noted in remarks (i.e HP=Uncontrolled Fireline, hovering hookups, low level flights, etc.)

Private Contracted Equipment time must be tracked on a Shift Ticket daily.

Supervisor’s - If you are responsible for daily tracking of equipment or personnel, please ensure you understand the agreement, and follow the rules provided in this document. Do not sign documents for resources you did not manage unless you have knowledge of their assignment hours.

MEAL AND OTHER WORK BREAKS

Compensable meal periods are the exception, not the rule (Chapter 10, Pg. 18 of NWCG HB2). Until the fire is controlled, personnel on the fireline MAY BE compensated for meal periods IF work is performed while eating. For personnel in support positions, and fireline personnel **after control** of a fire, a meal period of at least 30 minutes must be ordered and taken for each work shift of eight hours or more. In those situations where personnel cannot be relieved from work and must remain at a post of duty, a meal period may be counted as time worked, which will be compensable. **If breaks are NOT able to be taken, CTR should have a statement in remarks explaining the situation.**

Human Resource Message – American Fire

QUOTES to Ponder (in your spare time!)

A day without sunshine is like, you know, night.

Steve Martin

The best time to make friends is before you need them.

Ethel Barrymore

Between two evils, I always pick the one I never tried before.

Mae West

Great minds discuss ideas; average minds discuss events; small minds discuss people.

Eleanor Roosevelt

Try to be like the turtle - at ease in your own shell.

Bill Copeland

If you're called by a panther, don't anther.

Ogden Nash

Everything has beauty, but not everyone sees it.

Confucius

If you know of issues or want to talk, come visit us in Classroom 9 at ICP or call:

HUMAN RESOURCE SPECIALIST (HRS): MARY MCDONOUGH (559) 593-3905
UNION REPRESENTATIVE: DANI SWANTIC, (530) 394-0641

Waterbar Guidelines

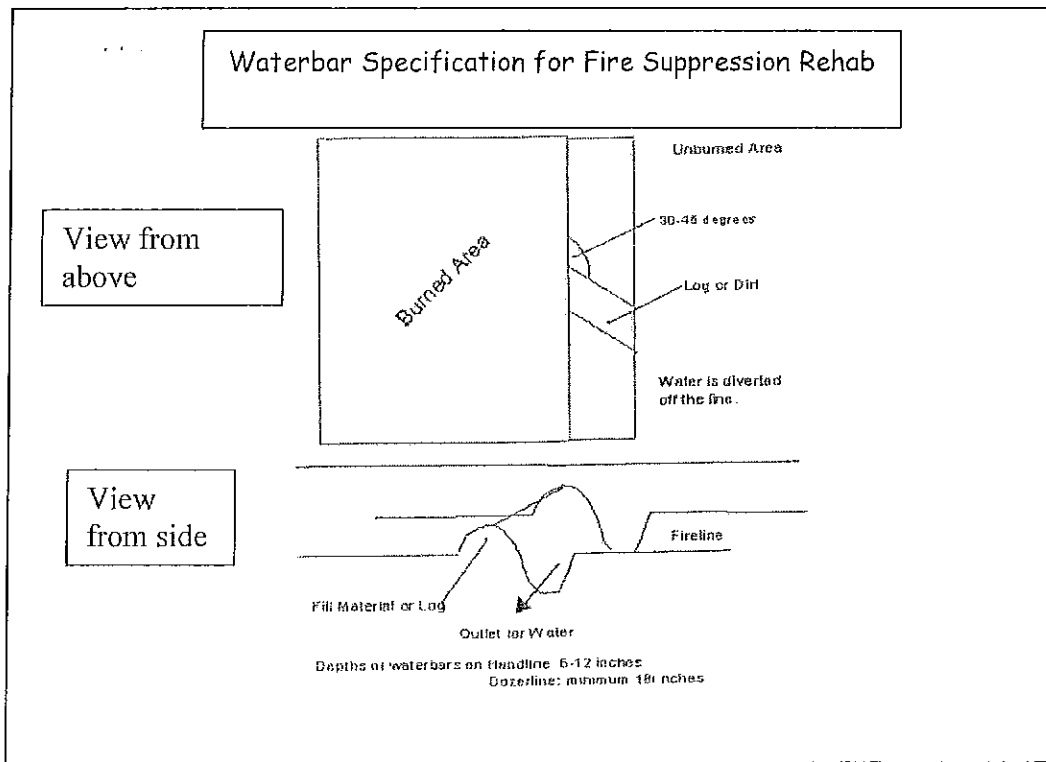

Recommended Maximum Spacing for Waterbars on Firelines (dozer and handlines):

Road, Trail, or Fireline Gradient	Waterbar Spacing (Feet)	
	Federal Property	Private Property
1-6%	300	150
7-9%	200	150
10-14%	150	100
15-20%	90	100
21-40	50	75
41-60%	25	50

Waterbars should be angled 30-45 degrees down slope and outside the fireline into existing vegetation, rocks, down logs or slash were possible. Use natural drainage where possible.

If the fire is on both sides of the dozer line, drain waterbars on alternating sides of the road. If the dozer line is unburned on either side, water bars should drain according to natural drainage patterns.

These are general guidelines and must be adapted to site topography, soils and vegetation characteristics. For example, areas that are rocky or well armored with rock do not need water bars.
