

INCIDENT ACTION PLAN

AMERICAN INCIDENT

CA-TNF-001562
P5HU11 (0517)

Monday - Monday

OPERATIONAL PERIOD

Monday, August 26, 2013
DAY 0600 - 1800 Hours

| | | | |
|----------------------------|-------------------------------------|---------------------------------------|---------------------------------|
| INCIDENT OBJECTIVES | 1. Incident Name AMERICAN | 2. Date Prepared 08/25/2013 | 3. Time Prepared 1730 |
|----------------------------|-------------------------------------|---------------------------------------|---------------------------------|

4. Operational Period
DAY 08/26/2013 0600 - 1800 HOURS

5. Objectives for the Incident (include alternatives)
Management Objectives:

1. Ensure firefighter, aviation and public safety through clear, concise direction and prioritization of work assignments.
2. Maintain a high level of collaboration with local communities, neighboring and cooperating agencies.
3. Provide timely and accurate fire information updates to the public, partners, and the community.
4. Minimize resource loss, impact, and damage to the greatest extent possible on private lands and sensitive areas.
5. Protect public and private infrastructure and other resources under special use permit or contract.
6. Minimize resource damage to natural, wilderness, and threatened & endangered habitat, and cultural resource values. Execute suppression action where it does not compromise firefighter safety.
7. Initiate suppression repair action where possible per specifications and direction from the Resource Advisor.

Control Objectives -- Keep the Fire:

North of Road 96 (Mosquito Ridge)
East of current containment lines
South of current containment lines
West of Road 43 and Road 96

6. Weather Forecast for Period

WEATHER: Mostly sunny.
MAX TEMPERATURES: 68-75 above 5500 feet. 75-83 below 5500 feet.
MIN HUMIDITY: 22-32%.
20 FT WINDS:

RIDGETOP -- 0600-1200: East 5-15 MPH. Gust 20 MPH Little Bald Mountain.
1200-1800: South to Southwest 10-15 Gust 20 MPH, except Gust 30 MPH Little Bald Mountain.

SLOPE/VALLEY-- 0600-1000: Downslope/downvalley 3-6 MPH.
1000-1800: Southwest 10-15 MPH Gust 18 MPH.

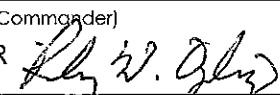

STABILITY/INVERSION: Inversion around 500 feet AGL...dissipating around 1100L.

6. General Safety and Risk Management Message
In confusing and uncertain situation, a good Operational Leader will:
Take charge, Motivate, Demonstrate, Initiate, Communicate, and Supervise

8. Attachments (mark if attached)

INCIDENT Weather Forecast

FORECAST NO: 22
PREDICTION FOR: Day Shift
SHIFT DATE: 8/26/13 (0600-1800)
TIME AND DATE FORECAST ISSUED: 8/25/13 @ 2030

NAME OF FIRE: American
UNIT: USFS (TNF)
SIGNED: 
 Richard Thompson/Shad Keene (T)
Incident Meteorologist

WEATHER DISCUSSION: Drying and warming will ensue today behind a trough that passed through last night. Temperatures will trend upwards 3 to 5 degrees, while humidities lower by 5 to 10 percent. Winds should decrease some today but gusty upcanyon/upslope SW winds are still expected in the afternoon.

Weather Forecast for Monday:

WEATHER: Mostly Sunny.
MAX TEMPERATURES: 68-75 above 5500 feet. 75-83 below 5500 feet.
MIN HUMIDITY: 22-32%.
20 FT WINDS:
RIDGETOP – 0600-1100: East 5-15 MPH. Gust 20 MPH Little Bald Mountain.
 1100-1800: South to Southwest 10-15 Gust 20 MPH, except Gust 30 MPH Little Bald Mountain.
SLOPE/VALLEY– 0600-1000: Downslope/downvalley 3-6 MPH.
 1000-1800: Southwest 5-10 MPH Gust 18 MPH.
STABILITY/INVERSION: Inversion around 500 feet AGL...dissipating around 1100L.

Weather for Monday Night: Mostly Clear.

MIN TEMPERATURES: 53-57 above 5500 feet. 56-61 below 5500 feet.
MAX HUMIDITY: 50-58%.
20 FT WINDS:
RIDGETOP – 1800-2100: Southwest to west 10-15 MPH Gust 20 MPH.
 2100-0600: East 5-15 MPH. Gusts to 20 MPH Little Bald Mountain.
SLOPE/VALLEY– 1800-2100: Southwest to west 5-10 MPH Gust 15 MPH.
 2100-0600: Downslope/downvalley 3-6 MPH.

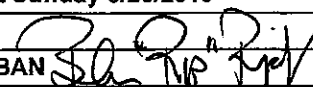

Extended Forecast: Some tropical moisture should approach the area from the south Tuesday afternoon, but will most likely remain south of the American fire. To account for this possibility, there is a 20 percent chance of thunderstorms Tuesday afternoon. Otherwise, a very gradual warming and drying trend is expected Wednesday and Thursday. Typical diurnal winds can be expected...upvalley/southwest in the afternoon/evening hours and downslope/downcanyon drainage winds during the overnight and morning hours.

OUTPUTS

FIRE BEHAVIOR

GENERAL: Active Burn Period seems to begin around 1600 hrs. Fire will continue to move through the surface fuels at slow to moderate rates of spread. Heavy surface fuels can promote transition to crowns with single and group tree torching. Short crown runs are possible where fuels, topography and winds align. Rollout and spotting can be a problem contributing to the spread of the fire outside of control lines. Observed spotting has been up to 1/3 mile. Anticipate increased spotting distance with winds above 30mph.

Local Thresholds – Watch Out: Combinations of any of these factors can greatly increase fire behavior. 20' wind Speed over 5 mph, RH less than 20%, Temperature over 80°, 10hr Fuel Moisture less than 4. Fire Spread in the absence of wind is associated with fuel and topography.

Unshaded: Fine dead Fuel Moisture: 7% Probability of Ignition: 50%
Shaded: Fine dead Fuel Moisture: 5-9% Probability of Ignition: 30-70%

SPECIFIC:

BRANCH I

Div-B Fire behavior limited to interior isolated heat in larger fuels. These heat sources could be a source of spotting or rollout.

Div-F Morning (0600-1100 hrs) East winds will again wind testing the lines. Fire behavior should remain interior as larger fuels are consumed. These heat sources could be a source of spotting or rollout.

BRANCH II

Div-H: Morning (0600-1100 hrs) East winds will again test the lines. Fire behavior should remain interior as larger fuels are consumed. Old burn scar snags and downed logs could be a source of spotting or rollout. Anticipate increased spread rates in the lighter fuels associated with the old burn area.

Div-R Fire behavior limited to interior isolated heat in larger fuels. These heat sources could be a source of spotting.

Div-T The fire is backing down into Deep Canyon from Cavanah Ridge and the firing off the 43 road. Fire is expected to remain in the surface fuels with slow rates of spread associated with backing fire. Roll out into the canyon may produce interior short runs single/group tree torching but should be of limited threat as firing depth is established in the canyon.

BRANCH III

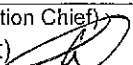

Div-Z: Fire currently established in the lower portion of Deep Canyon and Bear Trap Canyons. These features may cause winds to eddy along the ridges and in the canyons. Anticipate altered wind direction in this area. The fire continues to creep in surface fuels. Very steep terrain is subject to roll out along with short crown runs and increase spotting.

Div-A: Fire behavior limited to interior isolated heat in larger fuels.

AIR OPERATIONS: Visibility may be compromised by smoke due to morning inversion 500. Expected to dissipate late morning.

SAFETY

Lookout Points: Roll out...Fire coming into alignment with canyon and drainages...Increased winds promoting rapid rates of spread and increased fire behavior...Falling snags and elevated source of spots. Especially where the firing took place in the A/Z Division. Maintain L.C.E.S.

| 7. Control Operations Begin mop-up along Forest Road 43 towards the T / Z break. SOFR Morlock and SOFR Fetherston are assigned to Division R and T. | | | | | | | |
| 8. Special Instructions Use only designated water sources marked by blue flagging. Avoid traveling through noxious weeds identified with flagging. Avoid sensitive areas marked with white/orange polk-dot flagging. Watch for open mine shafts in your work area. Continue to reassess structures located within the fire perimeter to ensure the area is secure. Damaged or destroyed structures are to be identified and their location provided to Situation Unit. Secure unburned biomass piles by wetting down. **Equipment with transport | | | | | | | |

American – Safety Message

INCIDENT: # CA-TNF-001562

DATE: 08-26-13

TIME: 0600-1800 Day

Carbon Monoxide And Particulate Matter Smoke Exposure Signs And Symptoms

General signs and symptoms and associated levels of CO exposure:

Low - No appreciable effect, except shortness of breath on vigorous exertion; possible tightness across the forehead; dilation of cutaneous (along skin) blood vessels.

Moderate - Shortness of breath on moderate exertion; occasional headache with throbbing in the temples Headache; irritable; easily fatigued; judgment disturbed; possible dizziness; dimness of vision. Headache, confusion; collapse; fainting on exertion Unconsciousness; intermittent convulsion; respiratory failure, death if exposure is long continued.

Site-specific hazards and mitigations identified prior to operational shifts to reduce firefighter exposure to smoke.

Firing Operations

Have a firing operations plan in place. Brief all resources in firing operations, have firing teams and holding resources identified.

- **Post adequate Lookouts and ensure solid communications.**
- Have a good starting and ending point for firing.
- Hazards: Drip Torch Fuel, Firing Devices and Projectiles.
- Wear and use all PPE.
- **Know what your fire is doing at all times.**
- **Ensure adequate egress for potential escape routes.**

Driving

- When driving keep speed at or below the posted speed limit and your headlights on.
- **Stay as far to the right of the road as is safely possible.**
- During shift change keep your speed at or below the posted speed limit.
- Schools back in session, watch for school busses and children at bus stops.
- Always fasten your seat belt before the vehicle is set into motion.
- Don't tail gate.
- Slow down, slow down, slow down.

There are three main types of distracted driving: **Visual**-taking your eyes off the road; **Manual**-taking your hands off the wheel; **Cognitive**-taking your mind away from the task at hand. Don't drive distracted!

Team #4 Safety Group

Hazard Trees

Situational Awareness: Survey your work area for hazard trees (green or black) early in the shift. The longer an area has been burned, increases probability for undermined trees.

Decision Making: Only go as deep as necessary during mop up to reduce hazards.

Flag, Avoid and Notify: Flag any identified hazard trees and notify your supervisor and any potentially impacted fire personnel.

Be alert for changing conditions: High wind increases the hazard. Avoid working under burned trees if winds increase appreciably.

Make a plan: Make your plan to reposition to a more secure area if wind conditions dictate **PRIOR** to the need arising. Don't wait until the last minute to prepare and execute the plan.

INCIDENT RISK ANALYSIS (ICS 215a)

| DIV | HAZARDOUS ACTIONS / CONDITIONS | MITIGATIONS / WARNINGS / REMEDIES |
|-----|--------------------------------|---|
| ALL | HAZARD TREES | <ul style="list-style-type: none"> • Follow Hazard Tree Safety Guidelines (IRPG p.20). • Limit number of personnel around snags and their exposure time; fallers must be qualified for trees being fallen. • Be especially alert around snags and burned trees during wind events. • Night time complicates hazard tree identification |
| ALL | DRIVING HAZARDS | <ul style="list-style-type: none"> • Drive defensively! Expect the unexpected around every curve. • Drive with headlights on; use chock blocks, keep windshields clean; look before backing; and use backers whenever available. • Watch for debris on the roads. • Increase following distances on dusty roads. Slow down when you meet opposing traffic or encounter washboard surfaces. • Monitor drivers fatigue due to long driving distances.. • Speeds vary, monitor posted speed limits. |
| ALL | REBURN POTENTIAL | <ul style="list-style-type: none"> • Potential for line construction in response to re-burn. • Monitor current weather conditions and forecasts. Make sure all personnel receive thorough briefings every shift. • Adhere to 10 Std Orders, mitigate 18 situations. • Maintain Situational Awareness. LCES in place always. |
| ALL | FATIGUE | <ul style="list-style-type: none"> • Be alert for signs of fatigue and take breaks as necessary. • Maintain 2:1 work/rest ratio or better. • Monitor incoming resources for level of fatigue. |
| ALL | HYDRATION | <ul style="list-style-type: none"> • Drinking water before, during and after shifts, up to 1.5 gal. per shift. • Be alert for signs of heat stress in yourself and others. |
| ALL | AIRCRAFT OPERATIONS | <ul style="list-style-type: none"> • Keep personnel out of drop zones. • Use air-to-ground frequency to communicate with aircraft. • Use clear, concise statements when directing aircraft. Use clock directions from pilot's perspective. • Don't engage in "heli-mopping". Eliminate unnecessary pilot exposure. |
| ALL | HOLDING AND MOP UP | <ul style="list-style-type: none"> • Conduct thorough briefing for all personnel (inside rear cover IRPG). • Evaluate areas for hazard trees and locate stump holes for avoidance. • Monitor fatigue, shorten shifts to increase rest where appropriate. • Provide motivation to workers to maintain situational awareness and avoid complacency. • Evaluate mop up distances against what is safe and necessary. • Follow "Look Up, Look Down, Look Around" procedures (IRPG p. 2-3). • Utilize Risk Management Process (IRPG p.1). |
| ALL | SUPPRESSION REPAIR | <ul style="list-style-type: none"> • Ensure personnel accountability and good communications. • Assess experience level of all assigned personnel, and adjust assignment and level of supervision accordingly. • Conduct thorough briefing for all operators and work crews using or working around heavy equipment. • When working with heavy equipment, follow mitigation guidelines identified in the IRPG (p. 90) • Brief crews with Job Hazard Analysis (JHA) provided by Safety prior to beginning work with brush chippers. • All workers involved in the operation must initial JHA after tailgate briefing. • Ensure only qualified chipper operators run the equipment. • Adhere to all abatement actions identified in JHA • Turn in initialed JHA to Safety at the end of shift. |

| | | | |
|---|--|---|--|
| ALL | INITIAL ATTACK | <ul style="list-style-type: none"> Do the Risk Management process prior to any engagement LCES will be in place during any operation. This country requires you to LOOK UP, LOOK DOWN AND AROUND. The weather can change instantly, always be observant. Base all actions on current and expected fire behavior | |
| Branch II & III | BURNING OPERATIONS (Remember to Keep Air Attack involved in all your operations) | <ul style="list-style-type: none"> Conduct thorough briefing for all personnel involved (inside rear cover IRPG). All personnel to be fully qualified for their assignments. Trainees must have qualified trainers. Utilize Risk Mgmt. Process (IRPG p. 1) for implementing plan. Required PPE to be worn by all personnel involved. LCES must be established prior to implementing burning operations (IRPG p. 6). | |
| ALL | SMOKE INHALATION | <ul style="list-style-type: none"> Avoid prolonged exposure to heavy smoke. Where necessary to work in heavy smoke, give workers frequent breaks in clearer areas, by rotating line resources. If possible alternate resources into Divisions of clearer air frequently. Increase focus on hydration to assist in recovery from exposure. | |
| ALL | MINE SHAFTS | <ul style="list-style-type: none"> Conduct thorough briefing for all personnel (inside rear cover IRPG). Avoid all mine shafts and adits Three Stripes You're Out: 3 Stripes of flagging tape means STAY OUT! | |

ICS 206 – Block 8, Emergency Medical Procedures (cont'd)

In the event of a medical emergency provide the following information to the Communications Unit

1. Declare the nature of the emergency.
 - a. Medical injury/illness? If injury/illness is it Life Threatening?
2. If Life Threatening, then request that the designated frequency be cleared for emergency traffic.
3. Identify the on-scene Point of Contact (POC) by Resource and Last name (i.e. POC is TFLD Smith).
4. Identify nature of incident, number injured, patient assessments and location (geographic and GPS coordinates).
5. Identify on-scene medical personnel by position and name (i.e. EMT Jones).
6. Identify preferred method of patient transport.
7. Request any additional resources and/or equipment needed.
8. Document all information received and transmitted on the radio or phone.
9. Identify any changes in the on-scene Point of Contact or medical personnel as they occur.

Selecting an On-Scene LZ

First, determine if the area is large enough to land. The landing surface should be flat, firm, and free of debris that could blow into the rotor system.

The touchdown area for the helicopter should be 125' x 125'.

The landing site should be clear of people, vehicles, trees, poles, wires, posts, stumps, brush, and large rocks.

Consider the wind direction. Helicopters land and take off into the wind.

Touchdown area should be marked, (an X to mark the center and one indicating wind direction).

If possible, wet landing area down to minimize blowing dust.

Radio Terminology

“Medivac” is for life threatening injuries only.

“Medical Transport” is for non-life threatening injuries.

John Kelly SOF 2 (T)

Human Resource Message—American Fire

- ❖ Behave in a manner that treats people with dignity, equity, courtesy, and respect. Do NOT engage in inappropriate behavior (for example...) touching, grabbing, lewd gestures, jokes with a sexual connotation, text messages or photographs of a personal nature, bullying, teasing about a person's race, color, religion, National Origin, gender (and/or sexual orientation), age, or disability status.
- ❖ You have the right and responsibility to say “no” to unwelcome advances or requests for favors.
- ❖ Abide by agency and incident ethics and conduct regulations.
- ❖ Report any harassment or other inappropriate behavior you observe or experience.

If you have issues, report them to your supervisor. If you need additional help, contact:

HUMAN RESOURCE SPECIALIST (HRS): MARY MCDONOUGH (559) 593-3905
UNION REPRESENTATIVE: DANI SWANTIC, (530) 394-0641

TRAINING SPECIALIST MESSAGE

JUST A REMINDER.....

It is not necessary to wait until the end
Of the Incident to complete
The Required PAPERWORK!!!

Check with the Training Specialist
After completing the Task Book.....

If you have
Any Questions or Concerns.....Please see me
In Room 4 at the ICP!

Thank you!

Waterbar Guidelines

Recommended Maximum Spacing for Waterbars on Firelines (dozer and handlines):

| Road, Trail, or Fireline Gradient | Waterbar Spacing (Feet) | |
|--------------------------------------|-------------------------|------------------|
| | Federal Property | Private Property |
| 1-6% | 300 | 150 |
| 7-9% | 200 | 150 |
| 10-14% | 150 | 100 |
| 15-20% | 90 | 100 |
| 21-40 | 50 | 75 |
| 41-60% | 25 | 50 |

Waterbars should be angled 30-45 degrees down slope and outside the fireline into existing vegetation, rocks, down logs or slash were possible. Use natural drainage where possible.

If the fire is on both sides of the dozer line, drain waterbars on alternating sides of the road. If the dozer line is unburned on either side, water bars should drain according to natural drainage patterns.

These are general guidelines and must be adapted to site topography, soils and vegetation characteristics. For example, areas that are rocky or well armored with rock do not need water bars.

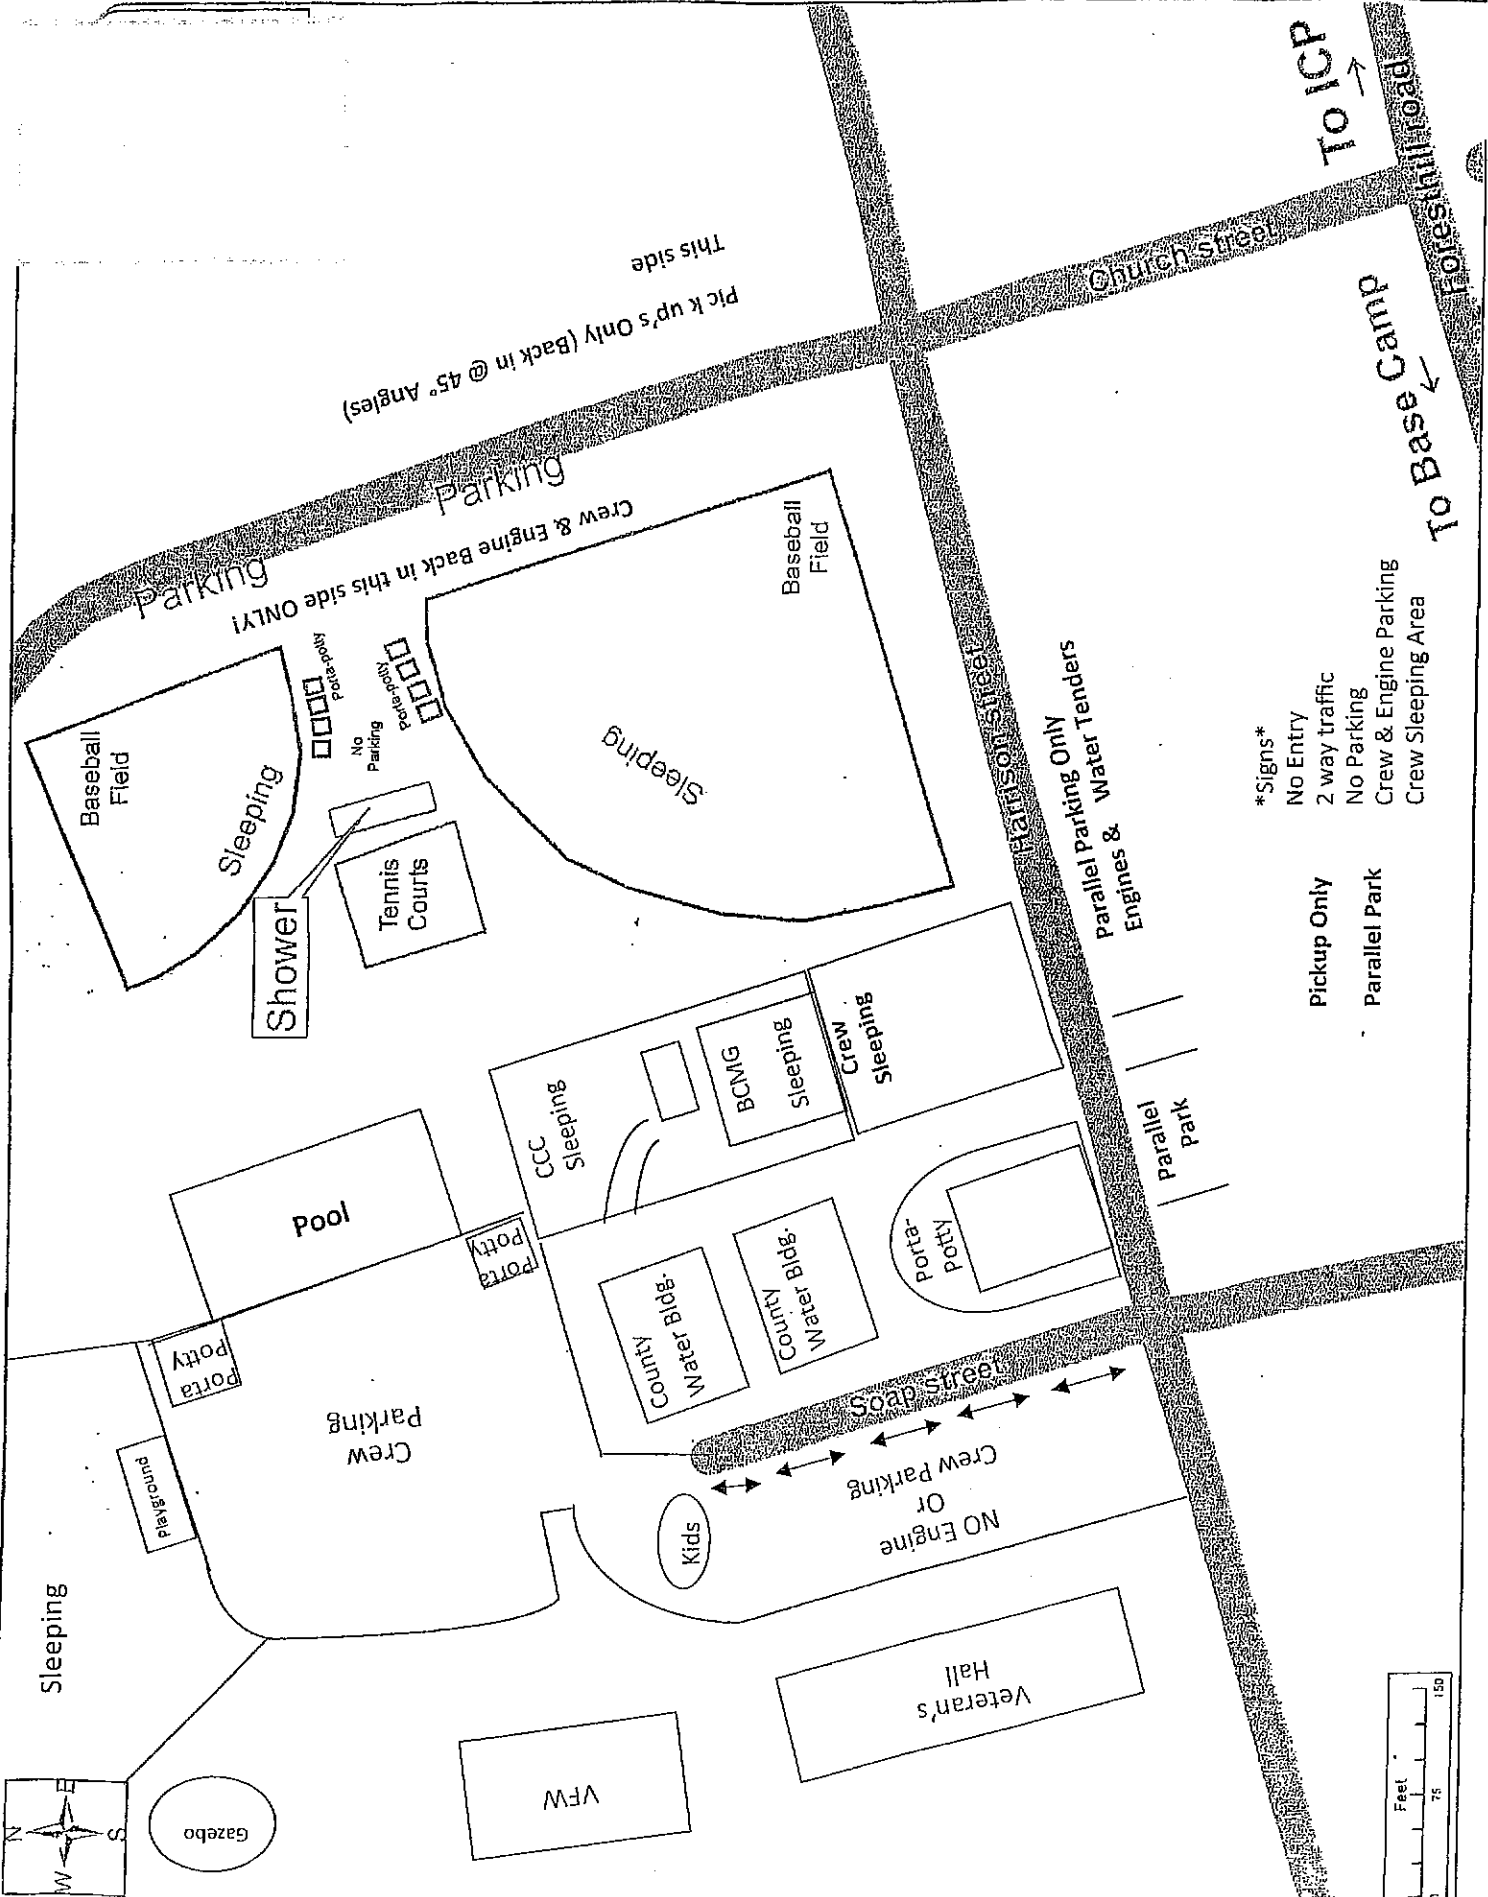

Hours for Shower: 0530—0800
 (Inmate showering only) 0800—1200
 1400—2300

Kitchen Hours: 0500—1000 Breakfast
 1700—2200 Dinner
