### INPUTS

#### WEATHER SUMMARY:

Mostly sunny. Areas of smoke in the morning  
 Temps and RHs – Max Temp 71-81° RH 10-18% LAL 1  
 20ft Wind –  
 Slope/Valley – East-southeast 12-18 mph gusts to 25 until 1100, then upslope/upcanyon 6 mph gusts to 12 mph  
 Ridgeline – Southeast to south 10 Gusts to 15 mph until 1200, then southwest 8 mph with gusts to 15.

### OUTPUTS

#### FIRE BEHAVIOR

##### GENERAL:

**FUELS**  
 Predominantly mature mixed conifer with heavy shrub loading. Fuel loadings are generally heavy. Live fuels moistures remain dry; however the dead fuels still remain moist in sheltered areas.

Thresholds for Active Fire Behavior in the King Fire area (Eldorado NF PocketCard): 20ft Winds (over 5 mph), RH (under 22%), Temperature (over 84°) and 1000hr FMC (under 9%). *Currently ERC's from local RAMS stations are 24% and 1000 hr fuel moisture is 18%.*

##### FIRE BEHAVIOR

Warmer, drier, and lower windspeeds in the afternoon. Fuels continue to dry out on sunny exposed aspects, but are still holding moisture under the canopy and on northerly aspects. Gusty east-northeast winds are blowing needle cast into the burn area and could be of concern in the future. Heavy fuels continue to burn out; warmer and drier temperatures along with gusty winds have increased fire activity within the perimeter. Any unburned islands near this activity will need to be monitored.

Unburned islands adjacent to heat sources on exposed southerly aspects could carry fire especially if they are lined up with the wind. Rate of spread could be up to 12 ch/hr on unshaded southerly aspects. Probability of ignition on southerly aspects is 32%, otherwise 0% on cooler aspects.

The attached QR code will reference the North Region Predicted Services updated 7- day forecast for additional information on the extended forecast.

#### AIR OPERATIONS:

Gusty east-northeast winds could hamper air operations in the morning hours

#### SAFETY

Gusty winds in the morning hours could push over fire weakened trees.

# SAFETY MESSAGE

## King Fire

October 2, 2014

USE LOOKOUTS, COMMUNICATIONS, ESCAPE ROUTES, SAFETY ZONE  
LCES IN PLACE EVERY TIME

### Major Hazards and Risks:

- ✓ Snags continue to be a major hazard. Fire has been burning for weeks expect more snags to come down as burning and smoldering around their base reduces the structural integrity.
- ✓ Situational Awareness – Conduct thorough briefings with your crew on all components of the IAP. Weather forecast should be highlighted in crew briefing today. Crews know where your EMTs and REMs are, and ensure communications are in place. Make LCES personal for your piece of real estate.
- ✓ Fire Behavior - Watch for areas previously cold to come back to life due to days of drying and winds.
- ✓ Communications - Command seems to have good coverage, inform communications if you locate any dead spots. Keep in constant communications with your crew, adjacent forces and appropriate overhead. Test command before engaging —use human repeaters where needed to ensure positive communications.
- ✓ Driving Safety - Slow down, we have no reason to be rushing around. Expect logging traffic on Eleven Pine to Wentworth Spring south. They will be hauling 8 loads at 6:00 AM and then 8 more loads at 1200. This will continue Throughout our time here on the incident.
- ✓ Heavy Equipment - Ensure all personnel are visible to dozers, maintain communications and mitigate overhead and rolling hazards. Maintain adequate separation between dozers and crews. Utilize traffic control on roads when transporting dozers to different parts of the fire.

The convention calls for frequency lists to show four digits after the decimal place, followed by either an "N" or a "W", depending on whether the frequency is narrow or wide band. Mode refers to either "A" or "D" indicating analog or digital (e.g. Project 25) or "M" indicating mixed mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeater and base stations must be programmed with the Rx and Tx reversed.
