Salmon River Complex

Wednesday

August 7, 2013

Day 0600 - 2200

Night 2200 - 0600

CA KNF 005561

INCIDENT OBJECTIVES	1. Incident Name	2. Date Prepared	3. Time Prepared								
ICS 202	Salmon River Complex	08/06/2013	2000								
4. Operational Period											
Wednesday August 7, 2013 DAY SHIFT 0600-2200 NIGHT SHIFT 2200-0600											
5. General Control Objectives for the Incident (include alternatives)											

Provide for safety of incident personnel, the public and Sawyers Bar community.

Control Objectives:

- •Keep fire North of North Fork Salmon River from Robinson Flat to Forks of the Salmon.
- •Keep fire South of the North Fork Salmon River from Lost Lake to Mule Bridge.
- •Keep fire East of Yellow Jacket Ridge north towards Morehouse Meadows.
- •Keep fire West of Mule Bridge and the 41N37 Road.
- •Provide initial attack for new fire starts on the Salmon/Scott River Ranger District north of North Fork Salmon River and within the District boundary.

Management Objectives:

- •Provide for protection of Sawyers Bar, private lands, recreation residences and infrastructure within and near the fire area.
- •Provide accurate and effective fire information to the public, residents and cooperators.
- •Minimize impacts to natural and cultural resources by utilizing Resource Advisors and following National Direction for retardant avoidance.

6. General Weather

Partly cloudy. A 10-15% chance of thunderstorms. Best chance will be early in the day and then again during the late afternoon and evening hours. Morning storms would be mostly dry with any late day storms trending wet with potential erratic and gusty winds.

7. General Safety Message

Red Flag Warning in effect until 11 pm for thunderstorms and gusty outflow winds...

Fire Weather Forecast

FORECAST NO: 2

NAME OF FIRE: Salmon Complex

PREDICTION FOR: 0600 Weds-0600 Thu

UNIT: Klamath NF Salmon-Scott District

SHIFT DATE: Weds Aug 7, 2013

SIGNED:

Ba WW

TIME AND DATE

Incident Meteorologist

FORECAST ISSUED: 2100 8/6/13

...Red Flag Warning in effect until 11 pm for thunderstorms and gusty outflow winds...

WEATHER DISCUSSION: A thunderstorm complex is forecast to be just to the north and east of the incident at the start of the day shift. Gusty outflow winds will need to be monitored...especially the higher portions of Branch I and III including Div É. As of this writing it appears the event may be winding down as the day shift starts. Then for a good part of the day the weather looks to be fairly quiet over the incident with slightly cooler temperatures and higher humidity compared to the last several days. The air aloft will remain unstable so any afternoon plume activity will be enhanced by the cool air aloft. Will need to watch closely for another round of late day convection but current data suggests the main threat will stay north and east of the Salmon Complex. Otherwise look for afternoon upcanyon winds along Sawyers Bar Road with a more southerly component to the wind along the higher ridges on the north side of the fire.

WEATHER FORECAST FOR Wednesday:

WEATHER: Partly cloudy. A 10-15% chance of thunderstorms. Best chance will be early in the day and then again during the late afternoon and evening hours. Morning storms would be mostly dry with any late day storms trending wet with potential erratic and gusty winds.

TEMPERATURES: About 3-6 degrees cooler. Highs 74-79 above 5000 feet with 82 to 89 for lower elevations of the fire along Sawyers Bar Road.

HUMIDITY: Trending 5-10% wetter than previous days with afternoon minimum 18-28%

20 FT WINDS:

RIDGETOP - Southerly 5 to 10 mph with afternoon gusts 15 mph.

SLOPE/VALLEY - Less than 5 mph turning upcanyon/westerly 5-10 mph with

gusts to 12 mph after 2 pm.

HAINES INDEX: 5 LAL: 2

STABILITY/INVERSION: Inversion should lift by 11 am with unstable airmass aloft.

Wednesday Night:

WEATHER: Partly cloudy. A 10-15% chance of showers and thunderstorms with any storms trending wet.

TEMPERATURES: Cooler with lows in the 50s.

HUMIDITY: Good humidity recovery to 80% over most of the fire

20 FT WINDS:

RIDGETOP - South/southeast 5 to 10 mph

SLOPE/VALLEY - Becoming downcanyon 1-4 mph.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 4

FIRE NAME: Salmon River Complex

DATE ISSUED: 8/6

UNIT: Klamath NF

TYPE OF FIRE: Wildland Fire

OPERATIONAL PERIOD: 8/7 0600-0600

TIME ISSUED: 2000

SIGNED: Ben Newburn

INPUTS

WEATHER SUMMARY: Today brings the potential for thunderstorms with strong, gusty outflow winds and lightning over the fire area. **THIS HAS RESULTED IN A RED FLAG WARNING UNTIL 23:00.** Southerly flow will bring 5-10 with gusts to 15 mph. Slightly cooler temperatures today and humidity values will be in the mid-20s. Instability in the air mass will be in place again today with a Haines Index of 5. The inversion will mix out again similar to yesterday's shift and partly cloudy conditions will prevail through the day.

OUTPUTS

GENERAL: The thunderstorms in the forecast will bring the chances of strong, gusty outflow winds and downdrafts that will affect the perimeter where unburned fuel is below the fire. A steady southerly flow will once again test the northern perimeter and in drainages oriented north/south, particularly in the Little North Fork and Jackass Gulch. Expect to see group tree torching and short crown runs where fire is exposed to these winds and continuous fuels exist. The instability in the atmosphere will allow for column development from even small amounts of fire activity which increases spotting potential. Where the fire is impacting fire scars that are up to 10 years old expect to observe a slow, low intensity fire that will be relatively easy to suppress.

SPECIFIC:

Branch I (Div A, B, E): Fire will continue to flank through the landscape between the North Fork of the Salmon River and Yellow Jacket Ridge. Active fire behavior can be expected in Division E where the fire is moving through the plantations near the top of the ridge supported by the south winds that will be in alignment with the side drainages of the river under Yellow Jacket Ridge. Spread into Big Creek will continue as fire reaches the bottom of the slope and works its way across the creek to make a slope reversal. Downdraft winds will increase the threat of spotting across the Sawyers Bar Road near the leading edge of fire and back along the road where heat still exists and active holding operations are occurring. The far eastern portion of Yellow Jacket Ridge has been affected by past fires and has a significant amount of rock and scree that will help suppression efforts by keeping fire behavior isolated to concentrations of fuel driven by the large diameter fuels.

Branch III (Div. T, V, W, Z): The winds predicted from the south will continue to influence fire in the Little North Fork and Jackass Gulch helping to spread fire north up the drainage towards Specimen Creek and along the east aspect of Jackass Gulch. Convective energy produced by the instability in the atmosphere and the interaction of the two fires growing together will help increase fire behavior with group tree torching and higher intensity burning. The underslung perimeter in the upper reaches of Jackass will continue to flank and has a great potential to roll out leading to a short crown run in the stringers of timber in the bowl at the north end of the drainage. The discontinuous fuels found in the bowl will make it hard for the fire to make a strong push up to the ridge system north of Tanners Peak.

Night Div: Once nightfall occurs fire behavior will be moderated with smoldering and creeping fire behavior and the majority of heat found in large diameter fuels. Overnight humidity recovery will be better than past nights with the weather pattern slowly trending wetter into Thursday. Downdraft winds and the typical downslope diurnal wind will offer the potential for spotting across the Sawyers Bar Road, especially early in the shift.

AIR OPERATIONS

The inversion will mix out by noon with a residual haze left in the fire area. Expect visibility to improve throughout the afternoon. Thunderstorm activity throughout the day will have the potential to limit flights or create turbulence that makes some missions unsafe.

SAFETY

Thunderstorms are in the forecast today. Take time to review the thunderstorm safety on page 19 of the IRPG. Be aware of overhead hazards that might be affected by strong downdrafts and be prepared for lightning with the mitigations outlined in the IRPG.

SAFETY MESSAGE

INCIDENT:

Salmon Complex

DATE:

August 7, 2013

RED FLAG WARNING FOR THUNDERSTORMS

- ✓ <u>Red Flag Warning</u> in effect over the Salmon Complex. Watch for lightning, gusty winds, and sudden reversal of winds associated with thunder cells moving over the fire. Fire Behavior Forecast and Weather forecast needs to be important part of your crew morning briefing.
- ✓ Mountain Driving Driving involves the greatest risk we face in an average day on this incident—and it requires your full attention. Drive slowly through <u>Sawyers Bar</u>, slow down to 15 mph Please. Watch for deer on the roadway at early morning and night, especially watch for deer down in the valley around Etna all the way into Yreka.
- ✓ <u>Injuries</u> Starting to pick up, take time to plan a safe way to get the job done. Get your folks focused.
- ✓ <u>REMEMBER</u> Heat stress, dehydration, carbon monoxide can all add to your fatigue level.
- ✓ Watch for hazardous attitudes—complacency (just another routine fire), resigned (we can't make a difference), impulsive (do something even if it is wrong), invincible (it can't happen to us), and group think (afraid to speak up or disagree).

THUNDERSTORM SAFETY

Environmental Factors Category

Thunderstorms cause significant hazards for wildland firefighters, including downbursts that can cause extreme fire behavior and lightning. When thunderstorm development is likely, lookouts should be posted and aware of signs of a developing storm. A sudden reversal in wind direction, a noticeable rise in wind speed, and a sharp drop in temperature may note the mature stage of a storm. Heavy rain, hail and lightning occur only in the mature stage of a thunderstorm. During a storm, use the following guidelines:

- Do not lie down.
 - The best position is sitting on the pack or crouching with feet close together.
 - Avoid sitting directly on the ground, if possible; but, if necessary, keep feet and butt close together.
 - Avoid grouping together. Keep a minimum of 15 feet between people when possible.
 - Removing caulk boots will not provide safety if stocking covered or bare feet are then in contact with the ground--don't bother!
- "Stay out of dry creek beds" is correct for flash floods, but has nothing to do with lightning.
- → Handheld radios (with short rubber antennas) or cell phones are safe to use. Communication is vital to crew safety. Do not use land line radios or radios with elevated antennas.
- Wide, open spaces are better than trees or clumps of trees in the vicinity. Ridge tops, etc., should be avoided.
- If you feel the hair on your arms or head "stand up," there is a high probability of a strike in the vicinity. Crouch or sit on a pack.
- Put down all tools.
- Take shelter in vehicles if possible.

Crew Supervisor to contact Division Supervisor/Operations with patient complaint/condition and location.

444 Bruce Street Yreka, CA

2175 Rosaline Ave Redding, CA

Level 2 Trauma Center

2015 Stocton Ave. Sacramento,

Division Supervisor/Operations contacts communications:

- Division Supervisor/Operations to use "injury or incident communication protocol" on next page
- Division Supervisor/Operations will run medical emergency on command channel
- Communications contacts Medical Unit Leader on Command channel or (949)812-8695
- Medical Unit Leader will:
 - 1. Have communications dispatch ground/air transport resources
 - Notify receiving hospital of injury status.
 - Develop primary and contingency transport plan

CA

- Notify Safety, Logistics and Operations
- Contact YICC for notification of emergency. (530)842-3515

CAMP MEDICAL EMERGENCY:

Notify Communications of camp emergency

Communications contacts Medical Unit Leader(949)812-8695 with patient complaint/condition and location.

- Medical Unit contacts:
 - Safety
 - Logistics
 - Operations
 - Medical Unit Leader will:
 - 1. Have communications dispatch ground/air transport resources
 - 2. Notify receiving hospital of injury status.
 - Develop primary and contingency transport plan

Medical Emergency

or Non-emergency Medical transport

Best transport method: Ambulance Helicopter Vehicle

Patient Stable or Unstabl	e?
Any special equipment requ	uired
	Type of injuries
	Helispot)
	Resp Pulse BP Weight
Medical History/Allergies _	

Air Transportation Triage

	Ground or Air Ambulance to Hosp.	Transport to Med Unit
Mechanism	Hit by a falling tree or large branch Fall of 10' or more Insect bite with shortness of breath Signs of heat stroke (hot, dry, disoriented) Burn Injury greater than 1% body area	Minor dehydration Cut or laceration with bleeding controlled Minor bites and Stings Minor burns
Area Injured	Significant Blunt or Penetrating Trauma to Head, Neck, Chest, Abdomen or pelvis Any Arm or Leg fracture above the Joint	Minor blunt trauma Minor penetrating trauma Extremity sprains and strains Simple fracture below elbow or knee
Symptoms	Disoriented Chest Pain <u>or</u> Shortness of Breath Weak or absent radial pulse Pale, cold and sweating	Alert and oriented No shortness of breath Good pulses

Day/Night approved Medivac Sites

H-1	Forks of Salmon	N 41 15.60 x W 123 19.66
H-2	Sawyers Bar	N 41 17.84 x W 123 07.82
H-3	Idlewild Camp	N 41 19.61 x W 123 03.78

If air or ground ambulance is DELAYED:

Package and transport patient to rendezvous with Ambulance. Re-route EMS helicopter to rendezvous point as appropriate.

If Declaring an "Incident within the Incident"

The closest DIVS will respond to manage the incident. They are responsible for giving an accurate size up, ensuring scene safety, setting priorities and initiating an appropriate response. The closest Safety Officer and Line EMS will respond to the scene to assist the Branch Director or DIVS. Secure site and begin initial investigation when situation is stabilized.
