Salmon River Complex

Thursday

August 8, 2013

Day 0600 - 2200

Night 2200 - 0600

CA KNF 005561

INCIDENT OBJECTIVES	Incident Name	2. Date Prepared	3. Time Prepared								
ICS 202 Salmon River Complex 08/07/2013 2000											
4. Operational Period											
Thursday August 8, 2013 DAY SHIFT 0600-2200 NIGHT SHIFT 2200-0600											
5. General Control Objectives for the Incident (include alternatives)											

Provide for safety of incident personnel, the public and Sawyers Bar community.

Control Objectives:

- •Keep fire North of North Fork Salmon River from Robinson Flat to Forks of the Salmon.
- •Keep fire South of the North Fork Salmon River from Lost Lake to Mule Bridge.
- •Keep fire East of Yellow Jacket Ridge north towards Morehouse Meadows.
- •Keep fire West of Mule Bridge and the 41N37 Road.
- •Provide initial attack for new fire starts on the Salmon/Scott River Ranger District north of North Fork Salmon River and within the District boundary.

Management Objectives:

- Provide for protection of Sawyers Bar, private lands, recreation residences and infrastructure within and near the fire area.
- Provide accurate and effective fire information to the public, residents and cooperators.
- •Minimize impacts to natural and cultural resources by utilizing Resource Advisors and following National Direction for retardant avoidance

6. General Weather Day: Smoke in the morning then becoming partly cloudy with a 30-40% chance of thunderstorms producing lightning and gusty winds. Night: A chance of showers and thunderstorms through sunset, then partly cloudy. 7. General Safety Message ...Red Flag Warning in effect for thunderstorms with lightning and gusty outflow winds... 8. Fire Weather Forecast

FORECAST NO: 3

NAME OF FIRE: Salmon Complex

PREDICTION FOR: 0600 Thu-0600 Fri

SHIFT DATE: Thu Aug 8, 2013

TIME AND DATE

FORECAST ISSUED: 2100 8/7/13

UNIT: Klamath NF

Incident Meteorologist

...Red Flag Warning in effect for thunderstorms with lightning and gusty outflow winds… WEATHER DISCUSSION: Today will be a critical fire weather day as thunderstorm chances look to be increasing by this afternoon. Expect the inversion to lift by late morning due to the unstable airmass over the region and the proximity of an upper low off the coast. After 2 pm the upcanyon winds will increase along Sawyers Bar road while the winds on the ridges above 5000 feet will develop an easterly component. Expect to see thunderstorms firing by 3 pm to the east of our area but then spreading westward towards the Salmon Complex Fire. Thunderstorm chances will be increasing to 40% with the biggest threat to firefighter safety being frequent cloud to ground lightning and outflow wind gusts from 30 to 40 mph.

WEATHER FORECAST FOR Thursday: Smoke in the morning then becoming partly cloudy with a 30-40% chance of thunderstorms producing lightning and gusty winds. Best chance between 3 and 8 pm.

TEMPERATURES: About 2-5 degrees cooler. Highs 69-75 above 5000 feet with 78 to 85 for lower elevations of the fire along Sawyers Bar Road.

HUMIDITY: Trending 4-8% wetter than yesterday with afternoon minimum 19-29%

20 FT WINDS:

RIDGETOP - Easterly 5 to 10 mph with afternoon gusts 15 mph.

SLOPE/VALLEY - Less than 5 mph turning upcanyon/westerly 6-12 mph with

gusts to 15-25 mph after 2 pm.

HAINES INDEX: 5 LAL: 3 after 3 pm CWR: 20% after 3 pm.

STABILITY/INVERSION: Inversion should lift by 11 am with unstable airmass aloft.

Thursday Night:

WEATHER: A chance of showers and thunderstorms through sunset then partly cloudy.

TEMPERATURES: Cooler with lows in the 50s.

HUMIDITY: Good humidity recovery to 70% over most of the fire by morning.

20 FT WINDS:

RIDGETOP - Easterly 4 to 8 mph

SLOPE/VALLEY - Becoming downcanyon 1-4 mph.

LAL: 3 until 8 pm CWR: 20% until 8 pm.

Extended Forecast: Upper low will pass over the area on Friday with another round of showers and thunderstorms that will bring wetting rains to the fire by Friday afternoon. In addition temperatures will be much cooler with highs only in the 60s above 5000 feet and 70s at lower elevations. Excellent humidity recovery Friday Night into Saturday morning. Shower threat will linger into Saturday afternoon as the upper low stays nearby. Warming and drying trend starts Sunday and continues into next week.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 5 TYPE OF FIRE: Wildland Fire FIRE NAME: Salmon River Complex OPERATIONAL PERIOD: 8/8 0600-0600 TIME ISSUED: 2000 DATE ISSUED: 8/7 UNIT: Klamath NF SIGNED: K

INPUTS

Ben Newburn

WEATHER SUMMARY: Thunderstorm activity will occur again today with the chance for abundant lightning and precipitation. A RED FLAG WARNING IS IN EFFECT TODAY FOR LIGHTNING AND GUSTY OUTFLOW WINDS. An easterly flow at the ridgetops on the fire area with increasing upcanyon winds along the North Fork of the Salmon River and the larger side drainages. The last half of the burn period will see increasing humidity and decreasing temperatures associated with the thunderstorm activity. Increasing cloud cover can be expected after 3 pm. Downdrafts from thunderstorms may produce wind gusts up to 30-40 mph.

OUTPUTS

GENERAL: The burn period will begin similar to the past two shifts with a slow lifting of the inversion allowing the fire to burn more actively. An east wind flow at the ridgetops will line up with the east/west oriented drainages producing the opportunity for upslope movement with group tree torching or even short crown runs. Spotting will be possible up to a 1/3rd of a mile down wind when fire behavior picks up.

Thunderstorms will build throughout the afternoon producing gusty outflow winds and a good chance for precipitation that will bring a significant slowing of the fire. Expect fire behavior to diminish greatly once it is shaded by cloud cover. Watchout for rain from thunderstorms that could cause mudflows and storm run-off.

SPECIFIC:

Branch I: The flanking activity under Yellow Jacket Ridge will continue today. The easterly wind will help spread fire down the ridge around DP 8 at the top of Big Creek. Fire backing into Big Creek will exhibit flame lengths less than 2 feet with isolated torching supported by areas of heavy surface fuel loading. Rolling material into Big Creek will be limited but upslope runs are possible where fire can hook around into unburned fuels aided by the easterly winds. Fire will continue to progress around China Point in the early hours of the burn period but the unsheltered nature of the fuels in the upper half of the slope will be subjected to the weather that will moderate fire spread.

Branch III (Div. T. V. W. Z): After the run up through the bowl at the end of Jackass Gulch fire will struggle to cross the ridge to the north of Tanners Peak due to the discontinuous fuels and rock scree that is found on both sides of the ridge. Spots in the top of Sawmill Gulch will be slow to grow thanks to a fuel bed that is broken up by rock. The wind from the east will help to push fire back towards the ridge north of Tanners Peak with limited backing down the slope into the main Sawmill Gulch. A fire scar on the north side of the Sawmill drainage will help to check fire spread. Any other spots or slop overs north of Tanner will be subjected to the same effects of those in Sawmill Gulch. The perimeter extending from Jackass Gulch up to Tanner Peak will continue to flank south, particularly on the lower portion of the slope where a heavy timber canopy and a heavy surface fuel loading is found. Stringers of timber and brush leading up to the Tanner Peak line will carry fire as a head fire upslope but flanking in the upper slopes will have to work to be successful. The head fire in these stringers of fuel leading up to Tanners Peak and the line down to the mouth of Jackass will likely include torching and pulsing crown fire where ladder fuels and a dense canopy exist.

Night Div: The increased humidity and lower temperatures that will be present going into the shift will limit fire activity to sheltered fuels and larger diameter material. The weather pattern will assist in controlling any open fire and is likely to stop fire spread where open perimeter exists. Attempts at firing operations will struggle to be successful under these conditions.

AIR OPERATIONS

The good mixing conditions in the atmosphere will help lift the inversion by lunch time leaving a residual haze over the fire area allowing for enough visibility to fly but still hampering visibility. Afternoon thunderstorms will be more wide spread than previous days and are likely to produce precipitation. Strong outflow winds will affect missions near cells.

SAFETY

Keep in mind the hazards associated with indirect line and working above fires. Take time to review the Downhill Checklist on page 8 of the IRPG if you are working above the fire. The list of Common Tactical Hazards on page 5, the Indirect Strategy points on page 87 and the Fireline Location items on page 88 of the IRPG are useful when working on indirect line.

Patrol Sawyers Bar 01 Road (1C01) from the A/Z break to western flank for spot fires, roll out or threat of fire crossing the road to the south. Continue to prep structures and road to A/B break.

All resources in Div A are available for IA.

8. Special Instructions

Respond to new starts as directed by Branch I.
SHF 311 available to assist Rapid Extrication Module if need for a medical aid.

Back haul all trash to Idlewild Staging.

SAFETY MESSAGE Salmon River Complex

Day Shift August 8, 2013

USE LOOKOUTS, COMMUNICATIONS, ESCAPE ROUTES, SAFETY ZONES WEAR YOUR PERSONAL PROTECTIVE EQUIPMENT DURING ALL OPERATIONS Brief your crews on all components of the IAP

- ➤ Red Flag Warnings, Red flag warnings for Thunder storm activity. Watch for changes in weather and wind direction. Brief your crews on Thunderstorm safety (Page 19 IRPG).
- ➤ <u>Possibility of Heavy rain</u>, If a wet cell stalls over the fire, it is likely to produce significant local rain in a short period of time. Roads can become slick and drainages can fill rapidly with swift moving water. Get crews to solid and safe ground to wait out the rain.
- ➤ <u>Crews Experience Fatigue</u>, Crews have been here a while under lots of hot, smoky conditions doing difficult work in extreme terrain. Monitor crews for signs of fatigue and adjust work to compensate.
- Departing around pack mules. Pack mules are on the incident and may be used to supply some crews. Be very careful around these animals and only approach if invited to do so by the guide.

Prepared by: Jennifer Boyd, Safety Officer Date: 8/9/12

Working Safely Around Pack Stock

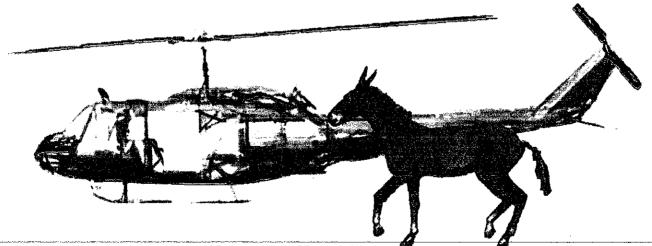

(Horses and Mules)

Miscellaneous Category

Fire crews often receive supplies that are transported by pack stock. While these animals provide fire crews a valuable service, they can cause injury to themselves and personnel, and severely damage food, gear and fire equipment if not handled properly.

Much like adding aviation resources to a fire incident, having pack stock around is adding an additional hazard to the fire environment which increases the difficulty in maintaining situational awareness. Fire personnel must be aware that human activity, aircraft, wildlife and weather conditions can and will affect the behavior of the pack animals, often unpredictably.

- Avoid making any sudden or abrupt moves or making any loud or unusual noises around the stock. Be calm, relaxed, steady and smooth around the animals at all times.
- When passing pack stock on the trail, know your escape routes at all times. Move off the trail before the stock passes. Calmly move to the same side, preferably the downhill side, with all of your gear. Be far enough off the trail that no one could get kicked, but close enough for the stock to see everyone. Talk to the packer and the stock as they approach and pass...this helps the stock know that you and your crew are not something to be afraid of.
- Packers, like all fire personnel, must maintain communications at all times. Ensure that the communication plan is known to everyone. Individual forest and park units will have the specific safety-related guidelines identified for Packers in regards to required fire training. PPE, communications, etc.
- Work around pack stock in the same manner you would work around a helicopter:
 - ✓ Stay outside of the safety circle unless invited or escorted in
 - ✓ Only approach from the front
 - ✓ Never approach from the tail or walk around the tail
 - ✓ Don't run, wave arms, throw tarps or anything else
 - ✓ Put your gear where directed and in an orderly manner.
 - ✓ Weigh everything. Weight and balance are important on mules and helicopters!

Have an idea? Have feedback? Share it.

8. MEDICAL EMERGENCY PROCEDURES

LINE MEDICAL EMERGENCY:

Crew Supervisor to contact Division Supervisor/Operations with patient complaint/condition and location.

Division Supervisor/Operations contacts communications:

- Division Supervisor/Operations to use "injury or incident communication protocol" on next page
- Division Supervisor/Operations will run medical emergency on command channel
- Communications contacts Medical Unit Leader on Command channel or (949)812-8695
- Medical Unit Leader will:
 - 1. Have communications dispatch ground/air transport resources
 - 2. Notify receiving hospital of injury status.
 - 3. Develop primary and contingency transport plan
 - 4. Notify Safety, Logistics and Operations
 - 5. Contact YICC for notification of emergency. (530)842-3515

CAMP MEDICAL EMERGENCY:

Notify Communications of camp emergency

Communications contacts Medical Unit Leader(949)812-8695 with patient complaint/condition and location.

- Medical Unit contacts:
 - Safety
 - Logistics
 - Operations
- Medical Unit Leader will:
 - 1. Have communications dispatch ground/air transport resources
 - 2. Notify receiving hospital of injury status.
 - 3. Develop primary and contingency transport plan

Injury or Incident Communications Protocol

Air Transportation Triage

	Ground or Air Ambulance to Hosp.	Transport to Med Unit
Mechanism	Hit by a falling tree or large branch Fall of 10' or more Insect bite with shortness of breath Signs of heat stroke (hot, dry, disoriented) Burn Injury greater than 1% body area	Minor dehydration Cut or laceration with bleeding controlled Minor bites and Stings Minor burns
Area Injured	Significant Blunt or Penetrating Trauma to Head, Neck, Chest, Abdomen or pelvis Any Arm or Leg fracture above the Joint	Minor blunt trauma Minor penetrating trauma Extremity sprains and strains Simple fracture below elbow or knee
Symptoms	Disoriented Chest Pain <u>or</u> Shortness of Breath Weak or absent radial pulse Pale, cold and sweating	Alert and oriented No shortness of breath Good pulses

Day/Night approved Medivac Sites

H-1	Forks of Salmon	N 41 15.60 x W 123 19.66
H-2	Sawyers Bar	N 41 17.84 x W 123 07.82
H-3	Idlewild Camp	N 41 19.61 x W 123 03.78

If air or ground ambulance is DELAYED:

Package and transport patient to rendezvous with Ambulance. Re-route EMS helicopter to rendezvous point as appropriate.

If Declaring an "Incident within the Incident"

The closest DIVS will respond to manage the incident. They are responsible for giving an accurate size up, ensuring scene safety, setting priorities and initiating an appropriate response.

The closest Safety Officer and Line EMS will respond to the scene to assist the Branch Director or DIVS. Secure site and begin initial investigation when situation is stabilized.
