INPUTS

WEATHER SUMMARY: (Please see attached fire weather forecast)

High Temperature: 78-98° **Minimum temperature:** 52-65 °

Minimum RH: 8-18% **Maximum RH:** 29-75%

Winds (20'): Day, Ridges east-northeast 6-9 mph becoming southwest 5-10 around 1200. 3-6. Night, Ridgetop variable 3-6 mph

GENERAL:

POI: 70-90% Predicted ERC: 85 Predicted BI: 86 Live Fuel Moisture Brush: 80%

Continued warm and dry, and moderately instable. Smoke in the canyon bottoms will shade fuels and decrease fire behavior through early to late afternoon. Fire will continue to back under these conditions. Unburned islands within the fire perimeter will continue to consume.

If and when the smoke lifts, fire activity will increase. Fire movement will be influenced by the terrain driven winds, dry fuels, and topography

As smoke lifts and the fuels become exposed to sunlight, the fire could become active including torching, and active crown fire especially when in alignment with the wind and slope. Moderate column growth is possible. Afternoon ridgetop wind will be fairly light but out of the southwest which will be favorable for holding firing operations from the past few days on the south end and reduce spotting potential in a southerly direction. Expect spot fires up to 1 mile.

Night Shift Personnel: Fuels will continue to burnout within the fire perimeter. The only fire growth anticipated will be in Division O near Hummingbird Ck. Low RH recovery on the ridgetops will enable residual fuels to consume.

SPECIFIC:

Division: Q, T, Z, D, F, G,H, J,K: Minimal fire behavior anticipated

Division L: Islands will continue to burn out west of Scott River Rd. Otherwise minimal fire behavior is anticipated

Division M and S: Afternoon southwest winds will be favorable for holding residual heat from firing operations.

Unburned islands will continue to burn out.

Division R: Minimal fire activity expected.

Division N: Fire will continue backing towards Turk Cabin.

Division O: Fire will continue to move south and southeast. Fire is currently burning in a timber stringer. In the bigger picture there are burn scars from previous fires that burned from 2002-2008. Fuels in these burns are mostly brush with downed snags partially across the landscape. And standing dead snags. Generally when fire moves into these burns the spread is from snag to snag, log to log, and when it runs into a jackpot the fire may run through the brush.

Potential Forward ROS on slopes: 1-25CH/HR

AIR OPERATIONS

Smoke cover could limit air operations throughout the day

SAFETY

Ensure lookouts are well placed and are keyed into changes in the weather and increases in fire behavior.

Medivac Sites

If air or ground ambulance is DELAYED:

Package and transport patient to rendezvous with Ambulance. Re-route EMS helicopter to rendezvous point as appropriate.

If Declaring an "Incident within the Incident"

The closest DIVS will respond to manage the incident. They are responsible for giving an accurate size up, ensuring scene safety, setting priorities and initiating an appropriate response.
The closest Safety Officer and Line EMS will respond to the scene to assist the Branch Director or DIVS. Secure site and begin initial investigation when situation is stabilized.

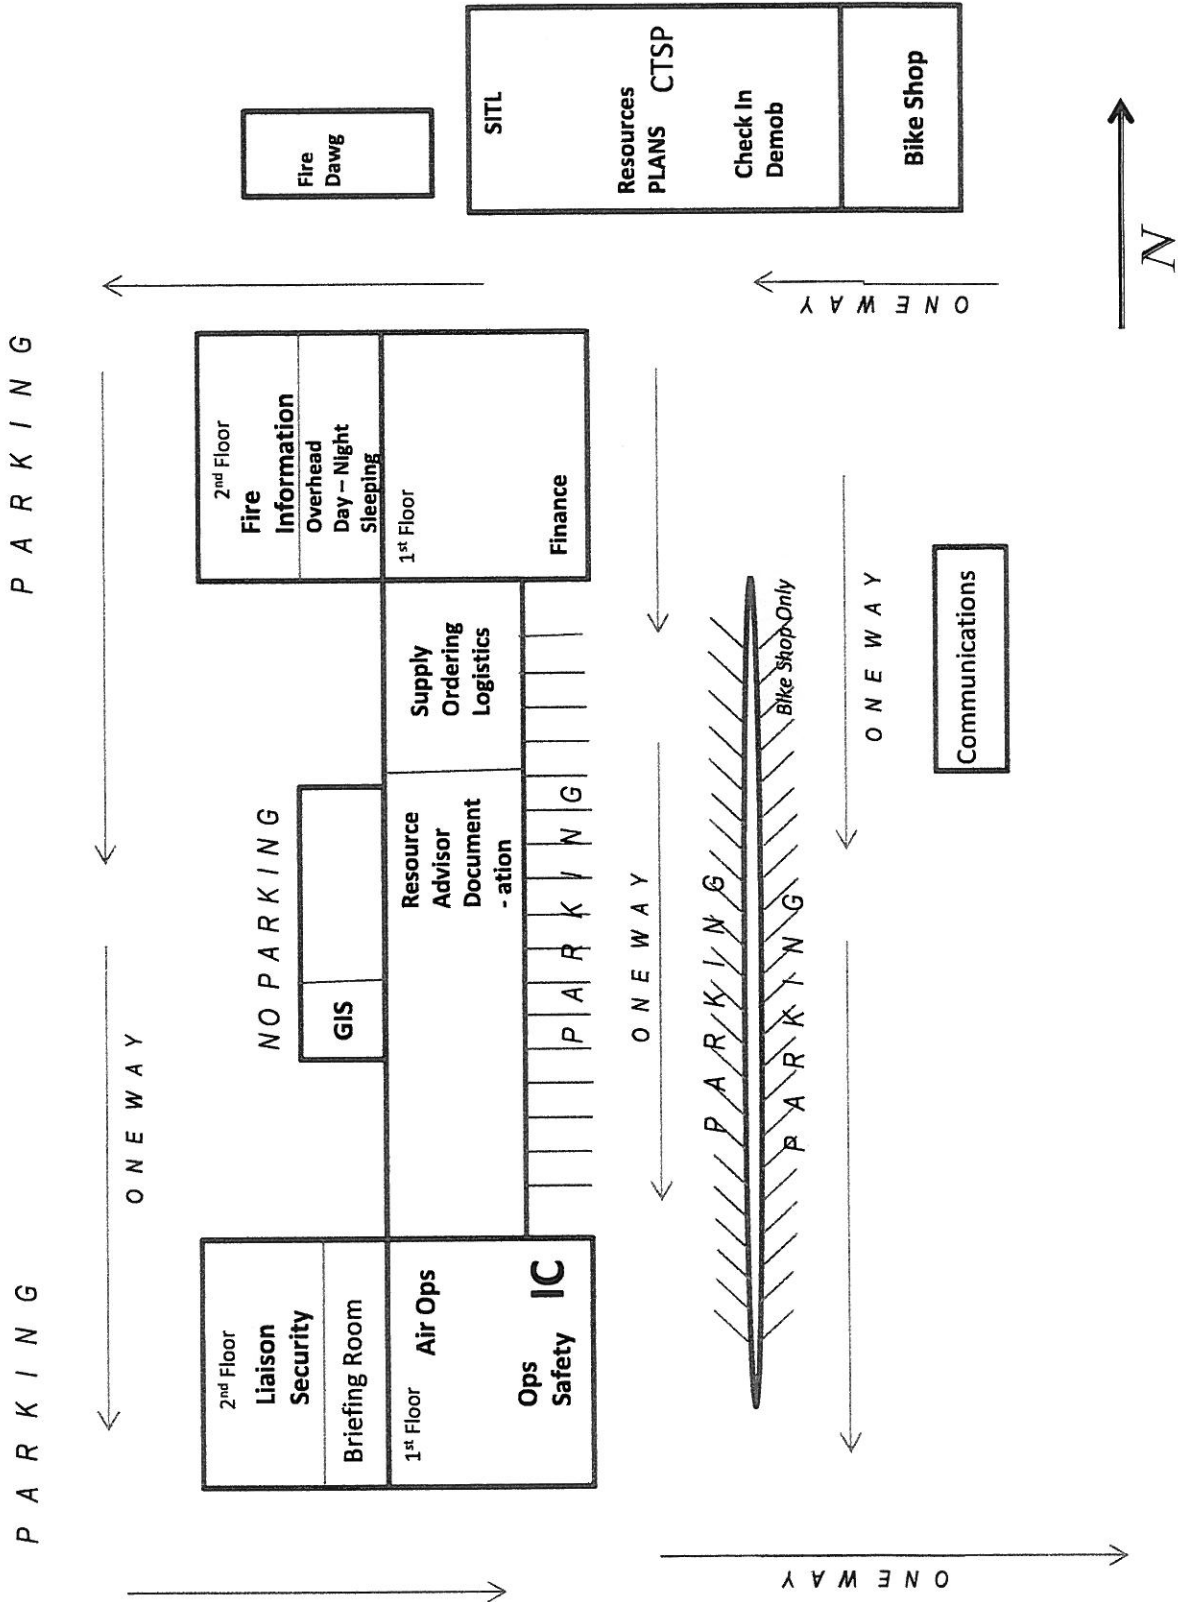

When something isn't going right, look for what is wrong not who is wrong, and how everyone can help make it better

Work together with your crew members – not against each other.

The Human Resources Specialist (HRSP) is Alan Seago, who works in a yurt-style tent between the Facilities tent and Ground Support, across the street from the trailer that distributes bag lunches. Alan's cell phone is (707) 315-6537.
