AIR OPS

INCIDENT OBJECTIVES	1. Incident Name	2. Date Prepared	3. Time Prepared		
ICS 202	Happy Camp Complex	9/19/2014	2200		
4. Operational Period					
Saturday - Sunday, September 20 - 21, 2014		DAY/NIGHT SHIFT	0600 - 0600 Hours		
5. General Control Objectives for the Incident (include alternatives)					
<p>MANAGEMENT OBJECTIVES:</p> <ul style="list-style-type: none"> - Provide for the safety of all responders and the public by utilizing nationally recognized risk management principles. - Maintain and enhance community and stakeholder relationships through accurate and timely dissemination of incident information, community and stakeholder meetings. - Minimize damage to natural and cultural resources by using resource advisors and cultural resource specialists. - Protect and minimize fire effects to residential structures, communities, infrastructure, private property and timber lands. - Support and coordinate initial attack within the Temporary Flight Restriction (TFR). - Manage costs commensurate with values at risk. - Assess and implement suppression repair. <p>CONTROL OBJECTIVES:</p> <p>Hold fire within existing containment lines and keep fire:</p> <ul style="list-style-type: none"> - South of the O'Neil Ridge west to Seiad Creek - East of Independence Creek - West of Scott River and Baldy Lookout South to Scott Bar Mountains - North of the line East from the North Fork Camp through Anthony Milne Camp to Man Eaten Lake 					
6. General Weather					
<ul style="list-style-type: none"> - <u>Weather Forecast for Saturday:</u> Warming and drying conditions continue. - <u>Weather Forecast for Saturday Night:</u> Clear, smoke filtering through the canyons overnight. 					
7. General Safety Message					
<ul style="list-style-type: none"> - Use caution while driving on all incident roads. Expect more traffic on Scott River Road. 					
8. Resource Protection Guidelines					
<ul style="list-style-type: none"> - Use MIST to preserve wilderness characteristics. - Avoid aerial retardant within 300 feet of wet areas and in areas with threatened, endangered, proposed, candidate or sensitive species - Use screens on all drafting equipment. - Track and map daily, all tactical burning operations and turn into DIVS/ SIT unit.

Happy Camp Complex Weather Forecast

FORECAST NO: 39
PREDICTION FOR: Day/Night Shift
SHIFT DATE: Saturday Sept 20, 2014
TIME AND DATE
FORECAST ISSUED: 2030 hrs. Sept 19, 2014

NAME OF FIRE: Happy Camp Complex
UNIT: CA-KNF
SIGNED: *David Shallenberger*
 David Shallenberger IMET(t)
 Rick Davis IMET

Weather Discussion: Dry conditions will continue for the weekend. The ridge over the Pacific Northwest will continue to build into the weekend with the upper low over the central California coast. Expect a southeast wind component to continue into Saturday and slowly begin to shift to the south and southwest into Saturday afternoon. Sunday winds will shift around to the west. Instability will be on the increase with significant column development on Saturday and slightly less unstable air on Sunday. The low over central California moving to the northeast will bring cumulus cloud development on Sunday afternoon.

Weather Forecast For Today (Saturday): **Sunrise: 0657**

Weather: Sunny. Increased instability and column development by the afternoon.
Max Temperatures: Canyons (1,200 ft) 90-95 °F, Ridges (7,000 ft) 75-80 °F
Min Humidity: Canyons (1,200 ft) 17-22%, Ridges (7,000 ft) 23-28%
Winds (20 foot):
 Lower Slope/Canyons – Terrain driven winds 4-8 mph.
 Upper Slope/Ridgetop – South Southeast 8-12 mph gusts to 18 mph. Shifting to the southwest to west at 6-10 mph in the afternoon.
Haines Index (High Level, afternoon): 4 (stability=2; moisture=2)
Stability/Inversion: Moderate instability. Inversion starting to lift around 1100. Afternoon mixing height 13,000 feet MSL.
Smoke Transport: East southeast around 8 mph.

Weather Forecast For Tonight (Saturday Night): **Sunset: 1912**

Weather: Clear. Smoke filtering through the canyons overnight.
Min Temperatures: 48-53 F.
Max Humidity: Canyons (1,200 ft) 45-50%, Ridges (7,000 ft) 35-40%
Winds (20 foot):
 Lower Slope/Canyons – Variable / Drainage 1-4 mph.
 Upper Slope/Ridgetop – South 4-8 mph.
Haines Index (High Level, evening): 3 (stability=2; moisture=1)
Stability/Inversion: Weak to moderate evening instability. Radiation inversion developing after 2200. Thermal belt on the mid to upper slopes.
Smoke Transport: South around 5 mph.

Outlook For Sunday 9/21: Possible cumulus development. Moderate instability. Max Temps 80-93F. Min RH: 17-27%. Max RH: 40-50%. Ridge Wind: West 6-10 mph. Haines 3 (stability:1, moisture:2).

Extended Forecast (Aftn Ridge Winds):

	<u>Max T</u>	<u>Min RH</u>	<u>Max RH</u>	<u>Ridge Winds</u>	<u>Wx</u>
MON 9/22:	78-90	19-29%	45-55%	SW 8-12 mph	Moderate instability
TUE 9/23:	75-85	22-32%	55-60%	SW 8-12 mph	Few clouds, Weak instability

Incident RAWS (freq. 163.350): Johnson HG (DTMF 0004) SW of DivQ; Scott River LO (DTMF 0047) DivR

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 48	TYPE OF FIRE: Wildland Fire
FIRE NAME: Happy Camp Complex	OPERATIONAL PERIOD: 9/20/2014-9/21/2014
DATE / TIME ISSUED: 9/19/2014 2000	Day and Night
UNIT: Klamath NF	SIGNED: 
	Drew Smith FBAN / CALIFORNIA TEAM 4

INPUTS

WEATHER SUMMARY: *Daytime:* Sunny with increased instability. Temps: around 80°-95° depending on elevation. RH: Lower elevations = around 18% Higher elevations = around 25%. Winds (20 foot) = Southeast 10 mph with gusts to 18 at the ridgelines. **Transitioning** to Southwest to west 4-8mph by early afternoon....Slope and valleys winds 4-8 mph. *Nighttime:* Clear with some smokey conditions ...Temps: around 50°. RH: = around 40% - 45% ...Winds (20 foot) = South 4-8 mph ...Variable light winds 1-4 mph in the slope/valleys.

ERC= 85 Today...above the 90th percentile.....Today is a High Fire Danger Day !!

Local Thresholds are being met today for fire activity to increase.

Haines = 4

GENERAL:

The fire is burning in grass, shrub and intermix timber. Fuel specifics are Ceanothus, Manzanita, Mixed Pine, Cedar and Douglas Fir. Live Fuel Moisture = Timber 125% Shrub 80% (old growth).

The fire to date has been primarily topography driven. The predominant factor of fire spread has been consistently surface fire spread backing, flanking transitioning to headfire alignment. Occasional torching has developed with isolated crownfire runs with slope alignment.. Low dead fuel moisture contents are the driver behind continuous fuel consumption. Past significant runs were with slope and or wind alignment contributing to headfire runs and spotting. Sustained crown fire runs were dependent upon the surface fire and moderate instability.

Routine Rates of spread: headfire = 3-8ch/hr with backing 1-3 ch/hr.

When critical fire weather and fine fuel variables are met anticipate 25-40 ch/hr with headfire with crown involvement.

SPECIFIC:

Branch I and IV: Due to excellent handline construction and mop-up standards no progression anticipated. Interior torching and flare ups may materialize due to a jackpot.

Division N: Excellent opportunities to secure and hold by 1100 hrs...look for the southerly to westerly wind to push toward your line by afternoon.

Branch VI:

Division Z: *No fire growth anticipated* ..Interior jackpots and torching will continue with interior consumption.

Division A: Backing and flanking fire will continue with fire moving consistently. Today's drying trend will promote increased fire activity. Spotting has the potential to be more prevalent, up to ½ mile. Fire has the ability to progress steadily today under topography domination. The fire has the probability to cross Wooley Creek. Once established the fire will extend to Hell Hole, Big Meadow Creek and to the Salmon /Scott ridgeline to the division Z break to the East... This potential is most likely due to elevated crown temperatures with slope and wind alignment*** Heads up after 1500 hrs to 1800 hrs in this division...

AIR OPERATIONS

May be limited due to smoke impacts at times.

SAFETY

Today is a day of change in fire behavior anticipate activity to increase.

Larger dead and down fuels are driving this fire. Identify when your fuel type changes and wind exposure.

Identify when your fire has the ability re-position itself to run upslope with headfire.

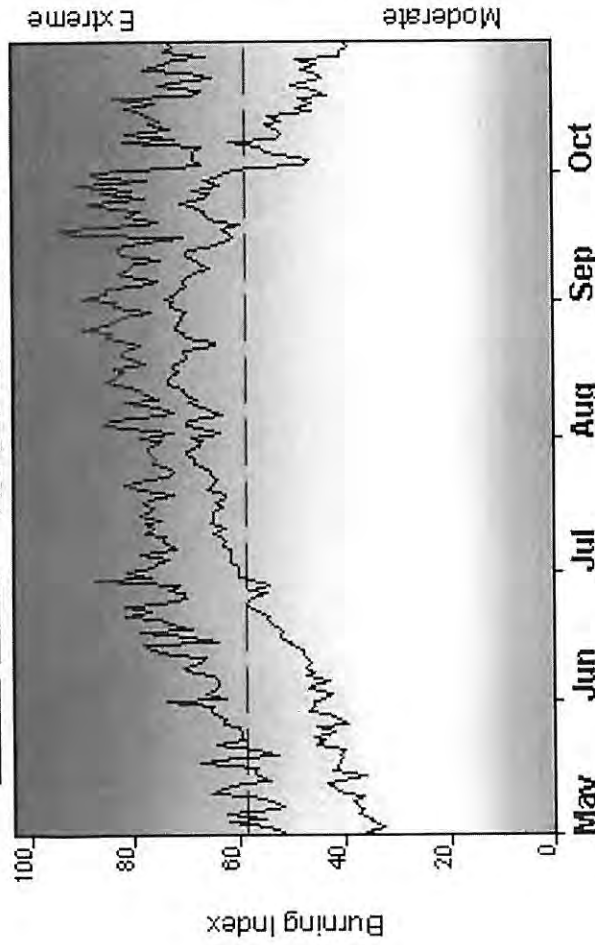

Monitor fire activity when a well developed column is developed..... instability exists today.

Validate your reaction time to reposition your crew to a safe location.

S.T.O.P. Stop, Think, Observe and Predict.

FIRE DANGER -- West Side KNF

Maximum, Average, and 43th Percentile, based on 12 years data

Extreme

Moderate

Fire Danger Area:

- 200, 202, 204, 208
- CA280 & CA281
- See below
- * Meets NWCG Wx Station Standards

Fire Danger Interpretation:

EXTRME -- Use extreme caution
(Caution) -- Watch for change
Moderate -- Lower Potential, but always be aware

Maximum -- Highest Burning Index by day for 2000 - 2011

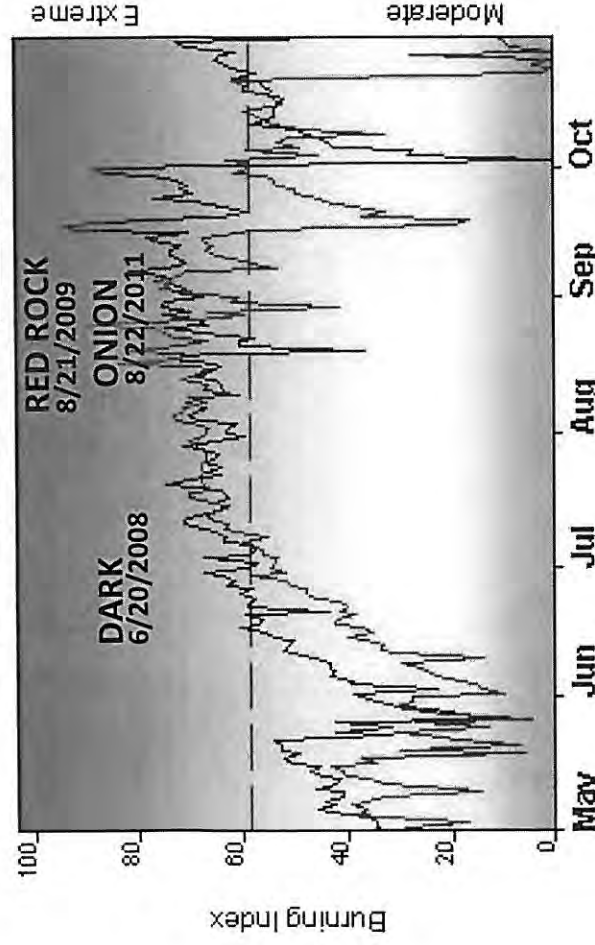

Average -- shows peak fire season over 12 years (2204 observations)
43th Percentile -- Only 43% of the 2204 days from 2000 - 2011 had an Burning Index below 58

Local Thresholds - Watch out: Combinations

of any of these factors can greatly increase fire behavior:
 20' Wind Speed over 4 mph, RH less than 40%,
 Temperature over 75, 1000-Hour Fuel Moisture less than 13

Years to Remember: 2008 2010

Extreme

Moderate

Remember what Fire Danger tells you:

- ✓ Burning Index gives day-to-day fluctuations calculated from 2 pm temperature, humidity, wind, daily temperature & rh ranges, and precip duration.
- ✓ Wind is part of BI calculation.
- ✓ Watch local conditions and variations across the landscape -- Fuel, Weather, Topography.
- ✓ Listen to weather forecasts -- especially WIND.

Past Experience:

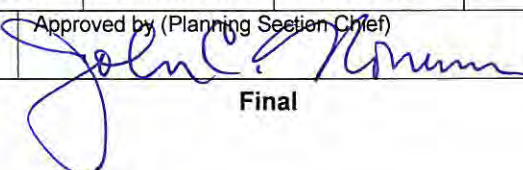

Large fires (>50ac) occur more frequently when BI exceed 58. Fires 50 acres and larger can readily increase in complexity
 Multiple lightning ignitions can overwhelm suppression resources. 2008 was an active fire year. 2010 was quiet.

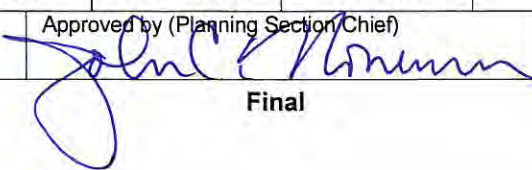

Sawyers Bar, Somes Bar, Slater Butte, Blue Ridge, Oak Knoll, Slater Butte, Collins Baldy Quartz Hill, Callahan #2, and Dutch-Indy R400S data was used.

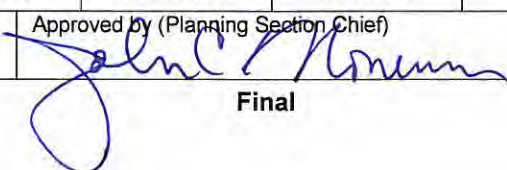

Responsible Agency: Klamath National Forest
 FF+4.1 Beta 1/108/2012-13:37 (F:\KNF_record_v25\m12)

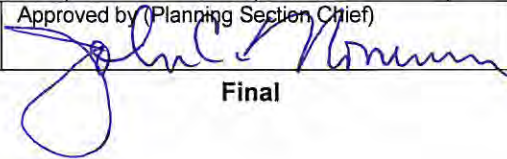

Fuel Model: G - Short-Needle (Heavy Dead)

Design by NWCG Fire Danger Working Team

MISSIONS

Ops Recon, IR mapping in Div. T and Div. A. Lookouts for Div. A to ridge top helispots. Medics from Div. Y to helibase. Jumpers from H-29 to H-55.
 Water drops Div. A and Div. T as needed to keep backing fire even.
 Assist with de-staffing Ski High Spike. Logistical missions as requested.

Happy Camp Complex – Safety Message

INCIDENT #CA-KNF-005956

DATE: 09.20-21.2014 TIME: 0600 – 0600

Measures to Enhance Recovery from Accumulated Fatigue

Crew leaders should know and apply measures to enhance recovery from accumulated fatigue. The basic measures include:

- Increased sleep in an environment conducive to sleep
- Reduced duration and frequency of physical work (possible change of duty the following day)
- Adequate supplemental nutrition and fluids during and immediately after physical work
- A high carbohydrate diet
- Monitoring the individuals for recovery

Poisonous Spiders

- If sleeping outside, shake out your sleeping bag before each use. It is best to use a tent!
- Sleep in a tent, keep the netting zipped up, and shake out the sleeping bag before each use.
- Shake out and check boots, bags and other gear if left inside or outside of a zipped up tent.
- On demobilization, use caution when packing your tent as spiders may be between the tent and fly, or under the tent, etc.
- Get treatment immediately for any bites, or suspected bites.

Driving

- When driving keep speed at or **below** the posted speed limit and your headlights on.
- **Stay as far to the right of the road as is safely possible.**
- Drive defensively! Expect the unexpected around every curve.
- **Scott River Road is open to the public!** Watch for and anticipate civilian traffic.
- Watch out for debris and wildlife on the roads.
- Don't tail gate.
- Always fasten your seat belt before the vehicle is set into motion.
- **Slow down, slow down, and slow down!**

Night Patrol with a Purpose!

- Get familiar with your patrol area and any local residents prior to darkness.
- Obtain a clear briefing to understand the purpose and intent of the patrol.
- Coordinate all patrol activities with adjoining patrol resources.
- Always keep the purpose of the patrol in mind before engaging.
- Share driving duties to manage fatigue.
- Always assess risk versus gain when considering taking action during night patrol.

INCIDENT RISK ANALYSIS (ICS 215a)

FIRE	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
F, T, O, K/R, M/N	Traffic and Driving	<ul style="list-style-type: none"> • Use caution while driving on all incident roads. Non fire personnel speeds on Highway 96 are often faster than we normally drive. • Expect more traffic on the Scott River Road. • Watch out for deer on all roads, especially during the dawn and dusk hours. • Drive defensively! Expect the unexpected around every curve. • Drive with headlights on; use chock blocks, keep windshields clean; look before backing; and use backers whenever available. • Watch for other vehicles, debris, and wildlife on the roads. • Don't trust other drivers; always expect the unexpected from them. • Use caution on area roads. The roads are very narrow with steep drop-offs.
ALL	Steep Terrain	<ul style="list-style-type: none"> • Determine if the mission is necessary. • Limit exposure by practicing avoidance whenever possible. • Use the proper resource. • Post lookouts, use footing situational awareness, traverse slopes when possible. • Use caution if crews are working downslope.
ALL	Rolling Materials	<ul style="list-style-type: none"> • Be alert for rolling materials on the fireline and roads. • Face your danger. • Maintain proper spacing. • Assess parking areas. • Be especially observant when working at night.
ALL	Hazard / Danger Trees	<ul style="list-style-type: none"> • Follow Hazard Tree Safety Guidelines (IRPG p.22). • Limit number of personnel around danger trees and their exposure time; fallers must be qualified for the trees being felled.
ALL	Complacency	<ul style="list-style-type: none"> • Stay mentally engaged on the task at hand. • Give clear briefings. Address complacency in your daily AAR. • Clearly identify the day's mission and purpose. • Use the "Buddy System" and watch out for each other. If you see something unsafe, say something. • Ask yourself: "Are you doing the job safely, the way you were trained?" • Look for a "new" or "fresh" approach for repetitive assignments.
BR VI	Holding Line/ Unburned Fuels	<ul style="list-style-type: none"> • Ensure LCES is in place. • Take frequent weather observations. • Closely monitor fire behavior and winds. • Set trigger points for departure from the area.
BR VI,IV	Remote Camps	<ul style="list-style-type: none"> • Ensure camps are clean of trash to avoid attracting wildlife. • Ensure sleeping areas are clear of snags and other tripping hazards. • Have hand sanitizers and body cleaning products to prevent illness. • Notify communications no later than 2200 with spike/coyote locations. • Have night contact/communications plans in place.
ALL	Fatigue / Smoke Effects	<ul style="list-style-type: none"> • Be alert for signs of fatigue and take breaks as necessary. • Maintain 2:1 work/rest ratio. • Monitor incoming resources for level of fatigue. • Allow for extended rest periods if needed. • Avoid working in heavy inversions for prolonged periods if possible. Take occasional breaks in clear air to mitigate build-up of CO, and CO2. • "Over hydrate" to assist in flushing smoke particulates from your system.
ALL	Fire Behavior	<ul style="list-style-type: none"> • Monitor current weather conditions and forecasts. • Maintain LCES. Advise all personnel if these are compromised or changed. • Adhere to the 10 Standard Orders, and mitigate the 18 Watch Out Situations
ALL	Extreme Drought Conditions	<ul style="list-style-type: none"> • Refer to the Northern CA Fuels and Fire Behavior Advisory. • Ensure solid LCES is in place. Provide more detailed briefings to out of state Resources. • Remember, fire behavior is exceeding normal expectations for this time of year. • Expect the un-expected: intensity and rates of spread to be higher than normal

Injury or Incident Communications Protocol

DECLARE: Medical Emergency or Non-emergency Medical transport

Best transport method: (circle) Ambulance Helicopter Vehicle

Location: (Div. & Lat / Long) _____

GPS Format: WGS84 Degrees, Decimal, Minutes

Situation _____

Any special equipment required _____

Number of injured _____ Type of injuries _____

Closest pick up point (DP, Helispot) _____

Level of consciousness _____ Resp. _____ Pulse _____ BP _____ Weight _____
 (alert & oriented x 1-4)

Injury _____ Agency (No Names) _____

Medical History/Allergies _____

Air Transportation Triage

	Ground or Air Ambulance to Hosp.	Transport to Med Unit
Mechanism	Hit by a falling tree or large branch Fall of 10' or more Insect bite with shortness of breath Signs of heat stroke (hot, dry, disoriented) Burn Injury greater than 1% body area	Minor dehydration Cut or laceration with bleeding controlled Minor bites and Stings Minor burns
Area Injured	Significant Blunt or Penetrating Trauma to Head, Neck, Chest, Abdomen or pelvis Any Arm or Leg fracture above the Joint	Minor blunt trauma Minor penetrating trauma Extremity sprains and strains Simple fracture below elbow or knee
Symptoms	Disoriented Chest Pain <u>or</u> Shortness of Breath Weak or absent radial pulse Pale, cold and sweating	Alert and oriented No shortness of breath Good pulses

If air or ground ambulance is DELAYED:

Package and transport patient to rendezvous with ambulance. Re-route EMS helicopter to rendezvous point as appropriate.

If Declaring an "Incident within the Incident"

The closest DIVS will respond to manage the incident. They are responsible for giving an accurate size up, ensuring scene safety, setting priorities and initiating an appropriate response.
 The closest Safety Officer and Line EMS will respond to the scene to assist the Branch Director or DIVS. Secure site and begin initial investigation when situation is stabilized.

STANDARD OPERATING PROCEDURES—FINANCE SECTION
“How to Earn an Honest Day’s Pay for an Honest Day’s Work”
16 HOURS IS NOT A GUARANTEE – IT IS HOURS WORKED!!

WORK REST CYCLE

IT IS NATIONAL DIRECTION TO MEET a 2 TO 1 WORK/REST RATIO (1 hour of sleep/rest for every 2 hours of work). Every effort shall be made to manage work hours so you don’t exceed the maximum of 16 hrs. Work hours exceeding 16 hrs shall be approved by your supervisor in advance, and a justification/mitigation form completed for review by Section Chief & approved by IC. It is each person’s responsibility to comply with this direction to manage for fatigue and safety.

OPERATIONAL SHIFTS

Pay status for assigned overhead and crews on the fireline will not start prior to the posted briefing time and will terminate on arrival back in camp (except for debriefing—additional hours may be accrued by those required to attend debriefing). Supervisors will be allowed ½ hour prior to briefing and after return to camp to ready crew and equipment.

DUTY STATUS

Division/Group supervisors and Unit Leaders are responsible for establishing on and off duty status. The objective is a 2 to 1 work/rest ratio. Personnel will normally work, travel, and/or be placed on ORDERED standby 8 to 16 hours per day and be off duty 8 hours or more (breaks count towards 8 hrs). Off duty time will be in a non-pay status. Each federal employee is guaranteed **at least 8 hours** of pay status each 24-hour period (midnight to midnight) unless it is the first or last day of an assignment or stated otherwise in a contract or agreement.

PERSONNEL/EQUIPMENT TIME REPORTING

Personnel time will be reported to the Time Unit and daily once they are signed by the next level supervisor. Local Government Resources hired under CFAA or Local Agreement w/Forest are also required to submit a Crew Time Report daily. OES resources will be monitored by OES Agency Rep (if assigned) for 2/1 Work Rest compliance. Situations entitling you to HAZARD PAY are to be noted in remarks (i.e HP=Uncontrolled Fireline, hovering hookups, low level flights, etc.)

Private Contracted Equipment time must be tracked on a Shift Ticket daily.

Supervisor’s - If you are responsible for daily tracking of equipment or personnel, please ensure you understand the agreement, and follow the rules provided in this document. Do not sign documents for resources you did not manage unless you have knowledge of their assignment hours.

MEAL AND OTHER WORK BREAKS

Compensable meal periods are the exception, not the rule (5 CFR 551.411 © and 29 CFR 785.19(a)). **Until the fire is controlled**, personnel on the fireline **MAY BE** compensated for meal periods if all of the following conditions are met: 1) The fire is not controlled and 2) The Operations Section Chief makes a decision that it is critical to the effort of controlling the fire that personnel remain at their post of duty and continue to work as they eat, and 3) The compensable meal break is approved by the supervisor at the next level and documented on CTR. For personnel in support positions, and fireline personnel **after control** of a fire, a meal period of at least 30 minutes must be ordered and taken for each work shift of eight hours or more. In those situations where personnel cannot be relieved from work and must remain at a post of duty, a meal period may be counted as time worked, which will be compensable. **If breaks are NOT able to be taken, CTR should have a statement in remarks explaining the situation. Kitchen closes at 2200 so dinner break is to be shown unless justified as to why you weren’t able to eat dinner.**

When something isn't going right, look for what is wrong not who is wrong, and how everyone can help make it better

Work together with your crew members – not against each other.

HR Specialist Alan Seago is in the yurt tent next to Ground Support. The HR tent has a box for lost-and-found, and a collection box for outbound mail. Alan's cell phone is (707) 315-6537.

RECYCLING MATTERS

Your efforts at separating plastic bottles and placing them in or near recycling containers are benefitting our local elementary after-school and sports programs. Scott Valley kids thank you!!

Only you can recycle!

CHANGE IN WEED WASH DIRECTION

The Weed Wash Station will remain in operation at Fort Jones Base Camp, although it is relocated to the new Ground Support Inspection Road.

New criteria for washing equipment:

- Masticators
- Chippers
- Dozers
- ATV's
- Engines
- Water Tenders
- Lowboys, etc.

Any equipment or vehicle that has left an established road surface, whether that surface was paved, gravel, or dirt, should be cleaned of debris that may harbor noxious weed seeds or parts.

Dozer and Hand Line Repair

1. Waterbars or dips will be constructed on all firelines where surface erosion is a concern according to the fireline waterbar specifications (see below).
2. Do not pull back slash onto containment lines. Pull back slash only on contingency lines or lines inside the burn. Pull back slash to achieve 50% ground cover.
3. Large woody material and stumps shall be piled or used to block access. **Outside of Wilderness:** Consider bucking whole trees or logs to reduce the length and size if they may pose a hazard to operators re-opening lines for future wildfires.
4. Where practical, dozer berms and handline trenches should be pulled back to the natural contour of the slope to reduce channeling water erosion.
5. Where dozers pushed soil or debris into drainages remove it from the channel and place above the slope break to the stream.
6. Where accessible by roads, dozer lines and hand lines will be blocked with berms to prevent motorized access.

In Wilderness

1. Flush cut all stumps created as a result of fire suppression. Dig around stumps if necessary to allow for easier and lower flush cutting. Place duff and soil on stump after cutting. Remove cut material from view of trails or campsites.
2. **DO NOT** cross hatch, waffle cut, or otherwise texture or score stumps or log ends.
3. Only remove hazard trees that are a threat to firefighter safety. **DO NOT** cut trees/snags that may become a potential "hazard" in the future.

Fireline Waterbar Specifications

Recommended spacing for waterbars on dozer and hand lines. Spacing may be adjusted to fit local terrain.

Slope of Fireline	Waterbar Spacing (feet)
1% - 9%	100
10% - 19%	75
20% - 39%	50
>40%	25

Water bars should be constructed at least 30 degrees perpendicular to the fireline. Angle waterbars away from the black to divert water into the green. Take advantage of natural dips or drainages to divert water onto vegetation, rocks, and slash.
