WEATHER DISCUSSION: Compared to previous days, conditions will moderate slightly on Zone 2 of the Happy Complex. The thermal trough is now over the region which will lead to light southerly flow in the morning that will gradually turn westerly in the afternoon. The airmass is still dry and somewhat unstable but Haines of 4 is forecast. Afternoon temperatures will be similar but heavy smoke in the drainages will limit heating along many of the Divisions in Zone 2. Humidity values will still be critically low but in comparison to previous days will trend higher. Afternoon up-canyons will be strongest and adverse to the line in Div K and Div R in the vicinity of Kelsey Creek as westerly flow increases during the peak burn period through 8 pm. The night shift should expect light down-canyon winds after 9 or 10 pm with noticeably better humidity recovery compared to the last several days.

FIRE BEHAVIOR FORECAST

GENERAL FIRE BEHAVIOR:

Even though the west winds will be light the potential for spotting over Scott River is significant. Our fire continues to be fuels and topography driven with a moderate potential for large fire growth. Primary fire spread is from spot fires caused by rolling material and torching, most of the fire is in a backing alignment. Drainages with continuous fuels have a high potential for sustained runs once the inversion breaks. Falling snags and rolling material will challenge containment lines and will increase the potential for fire spread over barriers that would normally hold the fire. If a large column develops expect spot fires out to 1+miles.

Expect rapid acceleration of fire behavior when the inversion lifts. The fire will go from smoldering and creeping to torching as soon as the sun hits the fuels.

Fire will remain active into the night until the RH recovers to 40%.

SPECIFIC:

- Any fire established in the base of Kelsey Creek has the potential to run out the drainage below Cayenne Ridge.
- Firing in M,N,&S should continue to back into Kelsey Creek. With the wind switching west spots over the line are likely. Any spots should stay in a backing alignment.
- East/west aligned drainages have high potential for sustained runs.
- The fire will continue to back down to Scott River Rd. If a plume develops expect spotting out to 1.5 miles.
- As the fire approaches the Hwy 96 Scott River Rd intersection battling drainage winds can lead to fire whirl development.
- Mid range spotting has the potential to impact Branch V and VI, spots will grow rapidly with flanking slope runs.

Air Operations: Poor visibility has a high potential to limit air operations.

SAFETY:

As the inversion lifts, expect a rapid increase of fire behavior.

Steep country means rolling material, watch for spot fires below you!

Happy Camp Complex Safety Message September 7-8, 2014

Hazards we face:

- Changing Fire Behavior
- Air Resources
- Radio Use Communication Responsibilities
- Steep Terrain
- Weakened Trees
- Shift Change
- Heavy Smoke
- Power Lines

Some possible mitigation could include:

- Have lookouts in place to detect changing fire behavior, they should be located in a smoke free area. Prompt them to look developing spots and for well-developed columns or changing columns.
- Air attack is our friend; they can identify changing fire conditions. Watch for aerial hazards and notify air resources; i.e. wires, towers, power poles and let them be known.
- Use correct terminology on the radio; example: spot fire is a fire across the line, slop over is connected to the fireline, active fire along the fireline and or flare up.
- Plan on rolling material compromising fireline safety and impacting the Scott River Road. Post a lookout just in case.
- Fire may have weakened trees and surrounding ground; look for signs of fire damage. Use professional cutters whenever possible.
- Make sure resources are not blocking roadway; shift changes have been problems, have a traffic plan in place to avoid narrow bridges being clogged up
- Know the symptoms of smoke exposure. Go to the medical unit if you have any question.
- Always treat power lines as energized; a dead power line is de-energized and grounded, ask that question when checking.

**Human Resource Message
Happy Camp Complex**

"Without belittling the courage with which men have died, we should not forget those acts of courage with which men have lived.

The courage of life is often a less dramatic spectacle than the courage of a final moment;

But it is no less a magnificent mixture of triumph and tragedy.

A man does what he must – in spite of personal consequences, in spite of obstacles and dangers and pressures –

And that is the basis of all human morality ...

-John F. Kennedy-

"I have learned that success is to be measured not so much by the position that one reached in life as by the obstacles which one has overcome while trying to succeed."

-Booker T. Washington-

*When you know who you are;
when your mission is clear and you
burn with the inner fire of unbreakable will;
no cold can touch your heart;
no deluge can dampen your purpose.
You know that you are alive.*

-Chief Seattle-

"To every person there comes a time in life, that special moment, when they are figuratively tapped on the shoulder and offered the chance to do a very special thing, unique to them and fitted to his or her talent. What a tragedy if that moment finds them unprepared or unqualified for the work which would be their finest hour."

-Winston Churchill-

Our lives are not determined by what happens to us but by how we react to what happens, not by what life brings to us, but by the attitude we bring to life. A positive attitude causes a chain reaction of positive thoughts, events, and outcomes. It is a catalyst, a spark that creates extraordinary results.
