FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 36	TYPE OF FIRE: Wildland Fire
FIRE NAME: Happy Camp	OPERATIONAL PERIOD: 9/9/2014-9/10/2014
DATE ISSUED: 9/8/2014	TIME ISSUED: 2000
UNIT: Klamath NF	SIGNED:  Bob Patton FBAN

INPUTS

WEATHER SUMMARY: (Please see attached fire weather forecast)

High Temperature: 73-88° **Minimum temperature:** 45-62 °

Minimum RH: 20-30% **Maximum RH:** 35-72%

Winds (20'): Day, Ridges becoming northwest 10-13 mph gusts to 20 mph afternoon near 1400. Night, Ridges northwest 8-12 mph gusts to 20 mph becoming variable 0-4 around 2100.

GENERAL:

POI: 60-80% **Predicted ERC:** 82 **Predicted BI:** 85 **Live Fuel Moisture Brush:** 80%

Smoke will shade the fire most of the day as it has the past three days limiting fire behavior until it lifts around 1500-1600. Fire growth will continue to be fuels and topography driven with potential for large fire growth. As smoke lifts and the fuels become exposed to sunlight, the fire could become extremely active including torching, and active crown fire especially when in alignment with the wind. Large column growth is possible. Expect spot fires 1+ mile.

Night Shift Personnel: Fire behavior could be active tonight as the shift begins especially on ridge tops. Heavy smoke will settle in to the drainages tonight with favorable relative humidity recovery that will reduce fire behavior at the lower elevations and drainages. More favorable relative humidity on the ridgetops should decrease fire activity as it rises above 40%.

SPECIFIC:

Division O, Q, T, Z, D, F, G,H, J: Minimal fire behavior anticipated

Division K: Ridgetop winds will mix with upcanyon /upvalley winds resulting in increased windspeed in the drainage this afternoon as the smoke clears. Watch for spotting again today to the southeast near DP-13.

Division L: Spotfires from yesterday near the northwest ¼ of section 28 are in alignment with the local winds and the ridgetop winds. If not secured by nightshift or early morning fire could continue to move southeast upslope. **ROS could be 5-35 ch/r.**

Division S and M: Northwest ridgetop winds could influence spotting to the southeast. As smoke clears, the spotfire southwest of DP-28 will be sheltered from the ridgetop wind. Local upslope/upvalley winds along with terrain and fuels will influence fire spread. Fire will continue to back off of Cayenne Ridge.

Division O and I: Fire will continue moving south and southeast towards Red Rock. There is the potential to spot to the southeast towards Packers Valley. **Rates of spread could be 1-25 ch/hr.**

AIR OPERATIONS

Smoke cover could limit air operations throughout the day

SAFETY

Due to the dynamic nature of fire behavior, intensity estimates are often times difficult to make with absolute certainty. It is imperative firefighters consider the worst case fire potential and build contingency actions into their plan to compensate for the unexpected.
