Happy Camp Fire Weather Forecast

FORECAST NO: 2

PREDICTION FOR: Dayshift

SHIFT DATE: Wednesday, 8/13/14

TIME AND DATE ISSUED: 8/12/14, 2000 PDT

INCIDENT: Happy Camp Fires

UNIT: Oak Knoll RD Klamath NF

SIGNED:

Dan Borsum, Incident Meteorologist (IMET)

Discussion: ...Breezy conditions again today...isolated showers and thunderstorms...

A weak cold front moving through the area will support gusty wind conditions especially at ridgetops and in the canyons. Scattered showers and isolated thunderstorms will be possible but little lightning is expected with only light precipitation. Cooler air moving in will bring higher humidity and also make inversions tougher to break. Showers will diminish overnight with winds decreasing.

WEATHER FORECAST for Wednesday, 8/13/2014:

SKY/WEATHER: Mostly cloudy and smoky with scattered showers and isolated thunderstorms.

MAX TEMP : 73-77 Ridges. 80-84 Valley Bottoms.

MIN RH: 30-35% valleys and 40-45% ridges

LAL: 2

CWR: 15%.

WEATHER FORECAST for Wednesday Night, 8/12/2014:

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 2	TYPE OF FIRE: Wildland Fire
FIRE NAME: Happy Camp Complex	OPERATIONAL PERIOD: 8/13/14
DATE ISSUED: 8/10/14	TIME ISSUED: 2200
UNIT: Klamath NF	SIGNED: /s/David Greathouse _____ Typed/printed: David Greathouse - FBAN

WEATHER:

*****Breezy with Isolated Showers and Thunderstorms today*****

See fire weather forecast for details

Thresholds for large fire growth:

Temps greater than 80°, RH's less than 25%, Eye level winds greater than 8mph

FUELS:

Conifers with grass and brush in the understory and broadleaf / conifer timber litter are the dominate fuels in this area. Fuels are very dry, having seen a persistent drought for the last three years and minimal snowpack this past winter. Current ERC-G values are above the 90th percentile. 1000-hour and 100-hour fuel moistures are at 6% and 7% respectively. Composites live fuel moistures across the district are running near historic lows. Expect fire behavior to increase around 1200 and lasts until 2100.

****Do Not Underestimate the Fire Potential!****

Forecasted Energy Release Component and Burning Index		
	ERC-G	Burning Index
West Zone	58 (↓ 20)	56 (↓ 22)
East Zone	56 (↓ 18)	44 (↓ 22)

FIRE BEHAVIOR:

With the predicted weather, Today should be an active fire day. Expect rates of spread (Head fire, 0% - 40% slope) to be 9 – 12 chains per hour with 7 – 8 foot flame lengths in the timber shrub fuel types and 5 – 7 chains per hour with 3 – 4 foot flame lengths in the timber litter fuel types. Remember, predicted wind gusts to 25 mph will increase rates of spread and flame lengths substantially. Where there is a ladder fuel component, expect fires to exhibit single tree and or group tree torching. Fires on slope have the potential for rapid uphill crown fire runs. Try to utilize areas for suppression where fuels are light and/or patchy. This is where fire intensity will be at its lowest. Direct attack on the flanks using hand crews is possible in the timber litter and timber brush fuel types. Downwind spotting up to ½ mile is possible today with a probability of ignition of 60%

AIR OPERATIONS:

Low visibility from smoke and gusty winds may hamper air operations

SAFETY:

Fire Order # 1 : Keep informed on fire weather conditions and forecasts
Take time each morning to review the fire weather and behavior forecast in the IAP
