OUTPUTS

FIRE BEHAVIOR

GENERAL:

The Fires main influence has been fuel and topography dominated. They are primary being driven by dead and down fuels. Fuels burning consist of Grass, Shrubs and Heavy Down (FM 1, 4, 10). Large dense stands of mixed Conifer are dominant throughout. Live Fuel Moisture is estimated at 90%. 1000 hr fuels are @ 8%. Headfire has displayed ROS @ 7-12 chains/hr with flame lengths of 4-8 feet. Single/group tree torching has occurred. There has not been any sustained crown fire spread thus far. Heavy fuels are holding large amounts of heat.

ERC is predicted @ 66 today (up 2).....Local threshold for large growth: 20' winds over 4 mph, RH less than 40%, Temps over 75*, 1000 hr FM less than 13% (refer to Pocket Card in IAP).

Scattered Tree Mortality is under 5%.

Probability of Ignition (shaded) will be 50% into receptive fuels for the better part of the operational period.

SPECIFIC

All Divisions:

The Fires will continue to display a low to moderate surface fire intensity with the possibility of single/group torching when inversion lifts and ventilation occurs. The forecasted weather will thread to a period of warmer temperatures and lower humidity...which have dried fuels even further from the previous days. Lighter fuels (1 hr and 10 hr) will continue to lose moisture and burn more readily. Heavy fuels will continue to hold heat until extinguished or consumed. Roll-out of burning material remains high and has led to the growth of the Fires. The potential for single tree torching will remain a threat due to surface fire that has dried aerial fuels. Increased fire activity will occur late afternoon as solar heating and lifting of inversion becomes a factor. The Fires will have the ability to make uphill runs as slope and winds become into alignment. Be particularly cautious on South, Southwest and Southeast slopes coupled with a southerly wind component. Direct attack along flanks with hose lines and hand crews are favorable. We could see spotting distance of up to ¼ mile at the ridges.

AIR OPERATIONS:

Air support may be limited due to Inversion or diversion to new initial attack fire.

SAFETY

- Identify your vulnerability on an advancing fire front when working hotspots
- Consider the potential for re-burning of available fuels
- Look for an increase in fire activity when winds shift in your division
- Evaluate the Fire's potential for upslope runs
- **STOP...Stop Think Observe and Predict**

FIRE DANGER – West Side KNF

Maximum, Average, and 43rd Percentile, based on 12 years data

Moderate Extreme

Years to Remember: 2008 2010

Moderate Extreme

Fire Danger Area:

- ◆ 200, 202, 204, 208
- ◆ CA980 & CA281
- ◆ See Below
- * Meets NWCW Wx Station Standards

Fire Danger Interpretation:

- EXTREME – Use extreme caution
- (Caution) – Watch for change
- Moderate – Lower Potential, but always be aware

Maximum – Highest Energy Release Component by day for 2000 - 2011

Average – shows peak fire season over 12 years (2204 observations)
43rd Percentile – Only 43% of the 2204 days from 2000 - 2011 had an Energy Release Component below 57

Local Thresholds - Watch out Combinations of any of these factors can greatly increase fire behavior:
20+ Wind Speed over 4 mph, RH less than 40%,
Temperature over 75, 1000-Hour Fuel Moisture less than 13

Remember what Fire Danger tells you:

- ✓ Energy Release Component gives seasonal trends calculated from 2 pm temperature, humidity, daily temperature & rh ranges, and precip duration.
- ✓ Wind is NOT part of ERC calculation.
- ✓ Watch local conditions and variations across the landscape – Fuel, Weather, Topography.
- ✓ Listen to weather forecasts – especially WIND.

Past Experience:

Large fires (>50ac) occur more frequently when 81 exceed 58. Fires 50 acres and larger can readily increase in complexity
Multiple lightning ignitions can overwhelm suppression resources. 2008 was an active fire year. 2010 was quiet.

Sawyers Bar, Somers Bar, Slater Butte, Blue Ridge, Oak Knoll, Slater Butte, Collins Baldy, Quartz Hill, Callahan #2, and Dutch-Indy RAWIS data was used.

Fuels and Fire Behavior Advisory
Northern California
August 6, 2014

Subject: Long term drought conditions along with hot and dry weather have led to critically low live and dead fuel moistures. Weather and fuels conditions are contributing to very active to extreme fire behavior in Northern California.

Discussion: The extremely dry and warm conditions of April through July combined with the extreme to exceptional drought conditions have led to critically low live and dead fuel moistures. Numerous large fires experienced extreme fire behavior and rapid growth during the first 4 days of August. Areas receiving precipitation on August 4th and 5th are expected to rebound quickly to extreme conditions.

Difference from normal conditions: Live and dead fuel moistures are approximately 6 weeks ahead of normal and typical of early to mid-September. Extreme to exceptional drought, the highest levels on the Drought Monitor system now cover nearly the entire North state. Live fuel moistures never reached typical seasonal maximums and are approaching or have already reached critical levels. All timelag classes of dead fuels are at moisture levels that allow for easy ignition and rapid spread.

Concerns to Firefighters:

- Expect fires to ignite easier and spread faster due to low live and dead fuel moistures. Recent fires have shown almost complete consumption of large dead fuels. Expect higher probability of ignition and increased spotting due to increased amount of receptive and available surface and aerial fuels.
- Current Energy Release Component (ERC) values are reaching maximum seasonal values or setting record highs for almost all Predictive Service Areas (PSA). ERC is a good indicator of seasonal drying trends. Anticipate increased spread rates and active night time burning.
- Anticipate higher resistance to control in all fuel types. When critical fire weather conditions exist expect very active to extreme fire behavior.

Mitigation Measures:

- Firefighters should acknowledge and prepare for fire growth and fire behavior that may exceed anything they have experienced before due to the extreme drought. Normal strategies and tactics may need to be adjusted to account for the drought factor. Suppression actions need to be based on good anchor points, lookouts, communications, escape routes, and safety zones.
- Local and incoming fire personnel need to be aware that fire behavior is exceeding normal expectations for this time of the year. Local briefings need to highlight specific fire environment conditions including local weather forecasts, Pocket Cards, ERC's, live and dead fuel moistures, and special fuel conditions such as mortality, Sudden Oak Death and frost killed brush, etc.
- Base all actions on current and expected behavior of the fire. Augment initial attack resources as incident activity dictates.
- Review the most current Northern California 7-day Significant Fire Potential along with Daily, Monthly and Seasonal Outlooks at: Predictive Services Outlooks & Fire Potential

Area of Concern: The area of concern is all of Northern California. A map showing the areas of concern described in this advisory can be found at: National Fuels & Fire Behavior Advisories

Hazards & Risks

Steep Terrain and Rolling Stuff! : With very steep terrain in all Divisions comes rolling rocks, logs, and humans. Watch your footing and avoid working below other personnel and equipment working above you. Stagger yourselves as you hike up and down the fireline and watch your spacing.

Snag Hazards: Fire weakened timber and falling snags are found in all Divisions. Reference pg. 22 of the 2014 IRPG for considerations and mitigation measures. Apply sound risk management when considering tree felling and establish safe work areas.

Vehicle Operations: Respect the local traffic laws and use extra caution when driving along forest roads in your areas of operation. Establish a traffic flow plan in areas that require it. Use emergency lighting as needed, especially when working along public roadways.

Emergency Medical: Review and brief the medical treatment and evacuation plan on the ICS 206 Medical Plan. The Happy Camp area has extended response and transport times for EMS so get medical responders going early on.

NO SLEEPING IN AND AROUND YOUR VEHICLES!

Sleep in designated sleeping area ONLY.

Incident within an Incident Action Plan

When the scope or complexity of the emergency exceeds division resource needs

This plan is designed to identify the **initial** actions that should be taken by the first arriving personnel on a serious accident. This person may be a single resource, engine boss, or a crew boss. Accidents or incidents within an incident happen rapidly and require sound, calm initial decisions to handle the problem, while still focusing on the main incident. The following checklist provides some key thoughts and actions.

The first arriving person to any accident should notify their Division Supervisor, or the Div Sup assigned to that location.

Advise of the critical information needed:

- Accident scene safety assessment and advise incoming personnel
- Number of injuries and their severity
- Special equipment needs (extrication, low/high angle rescue, fire protection or suppression)
- Assist the injured as necessary without endangering yourself or other personnel
- Do not move trauma victims unless their safety is in jeopardy
- Utilize PINK pages of the Incident Response Pocket Guide (IRPG) for patient assessment/medical procedures

Remain aware of surroundings and delegate personnel to monitor the main fire

The **Division Supervisor** will assume command of the accident/incident scene upon arrival. The following list outlines the general duties and tasks that should be completed on most accidents/incidents.

1. Delegate division oversight to another Division Supervisor or other qualified person.
2. Request a clear frequency from Comm and consider switching to designated Emergency Tactical (Incident Comm will notify the MEDL who will initiate the medical plan for injuries)
3. Order/delegate resources appropriate for the accident/incident (crew EMT's, Line EMT's or Line Medics, rescue equipment, patient transport needs, manpower)
4. Notify Operations Section Chief and Safety Officer on all accidents/incidents.
5. Begin to document the event accurately and completely. Use ICS form 201 if the event is large or complex.
6. Protect the scene for Investigators
