## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER: 007</b>	<b>TYPE OF FIRE: Wildfire</b>
<b>FIRE NAME: Happy Camp Complex</b>	<b>OPERATIONAL PERIOD: 8/18/14 0600-1800 hrs</b>
<b>DATE ISSUED: 8/17/14</b>	<b>TIME ISSUED: 2000 hrs</b>
<b>UNIT: Klamath National Forest</b>	<b>SIGNED: Richard Gonzales, FBAN</b> 

### INPUTS

#### WEATHER SUMMARY:

**See Weather Forecast for specific information**

Sky: Mostly Sunny...smoke trapped in valleys ... Temps near 87° ...RH around 22%....

Winds (eye level)...Valley: up slope/up valley 3-6mph...Ridge: NW 5-8 mph...w/ gust up to 12 mph...

LAL 2... Haines 3...Inversion lifting approximately 1600 hrs

### OUTPUTS

#### FIRE BEHAVIOR

##### GENERAL:

The Fires main influence has been fuel and topography dominated. They are primary being driven by dead and down fuels. Fuels burning consist of Grass, Shrubs and Heavy Down (FM 1, 4, 10). Large dense stands of mixed Conifer are dominant throughout. Live Fuel Moisture is estimated at 90%. 1000 hr fuels are @ 8%. Headfire has displayed ROS @ 7-12 chains/hr with flame lengths of 4-8 feet. Single/group tree torching has occurred on all fires sustained crown runs were observed on the Falkstein fire. Heavy fuels are holding heat under canopy.

ERC is predicted @ 70 today....Local threshold for large growth: 20' winds over 4 mph, RH less than 40%, Temps over 75\*, 1000 hr FM less than 13% (refer to Pocket Card in IAP).

Scattered Tree Mortality is under 5%.

Probability of Ignition (shaded) will be 60% into receptive fuels for the better part of the operational period.

### SPECIFIC

##### All Divisions:

The Fires will continue to display a moderate surface fire ROS and intensity. They will continue to back towards drainages and retain heat. Fires will make uphill runs as it establishes itself and slope/wind become into alignment. The potential for single/group tree torching will remain a threat due to ladder fuels being pre-heated by surface fire. Roll-out of burning material remains a high concern and has led to the growth of the Fires. Heavy fuels will continue to hold heat until extinguished or consumed. The forecasted weather will thread to a period of cooler temperatures and higher humidity...still, lighter fuels (1hr and 10hr) will continue to lose moisture and burn more readily. Increased fire activity will increase as solar heating and lifting of inversion becomes a factor. Direct attack along flanks with hose lines and hand crews are favorable. We could see spotting distance of up to 1/4-1/2 mile at the ridges.

**Frying Pan Fire:** will slowly back towards elk creek/china grade roads and move to the east along frying pan ridge...heads up for increase spotting as fire makes up hill runs that align with northerly winds. Watch out for fire establishing into horse creek and aligning with slope/wind.

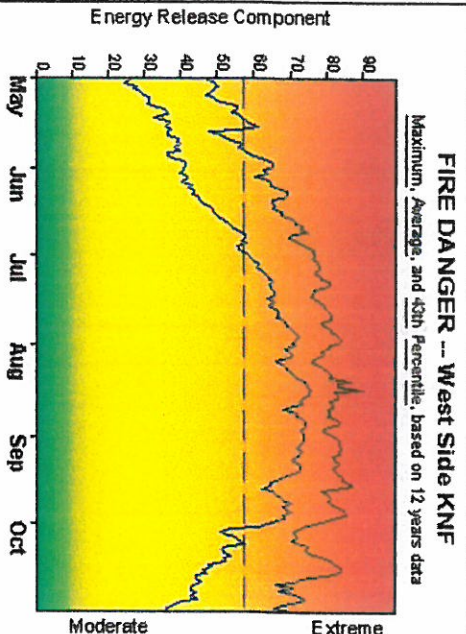

**Falkstein Fire:** will continue to back and flank into grider creek towards the northeast...heads up on fire stacking up and moving towards the ridgeline west...fire will continue to work its way north along grinder creek and south into stoness valley.

#### AIR OPERATIONS:

Air support may be limited due to Inversion or diversion to new initial attack fire.

### SAFETY

- Identify your vulnerability on an advancing fire front when working hotspots
- Consider the potential for re-burning of available fuels
- Look for an increase in fire activity when winds shift in your division
- Evaluate the Fire's potential for upslope runs
- **STOP...Stop Think Observe and Predict**

**Fire Danger Area:**

- ◆ 200, 202, 204, 208
- ◆ CA280 & CA281
- ◆ See below
- \* Meets NWCg Wx Station Standards

**Fire Danger Interpretation:**

- EXTREME -- Use extreme caution
- Caution -- Watch for change
- Moderate -- Lower Potential, but always be aware

Maximum -- Highest Energy Release Component by day for 2000 - 2011  
 Average -- shows peak fire season over 12 years (2204 observations)  
 43th Percentile -- Only 43% of the 2204 days from 2000 - 2011 had an Energy Release Component below 57

**Local Thresholds - Watch out:** Combinations of any of these factors can greatly increase fire behavior:  
 20' Wind Speed over 4 mph, RH less than 40%,  
 Temperature over 75, 1000-Hour Fuel Moisture less than 13

**Remember what Fire Danger tells you:**

- ✓ Energy Release Component gives seasonal trends calculated from 2 pm temperature, humidity, daily temperature & rh ranges, and precip duration.
- ✓ Wind is NOT part of ERC calculation.
- ✓ Watch local conditions and variations across the landscape -- Fuel, Weather, Topography.
- ✓ Listen to weather forecasts -- especially WIND.

**Past Experience:**

Large fires (>50ac) occur more frequently when BI exceed 50. Fires 50 acres and larger can readily increase in complexity  
 Multiple lightning ignitions can overwhelm suppression resources. 2008 was an active fire year. 2010 was quiet.  
 Sawyers Bar, Somes Bar, Slater Butte, Blue Ridge, Oak Knoll, Slater Butte, Collins Baldy, Quartz Hill, Callahan #2, and Dutch-Indy RAWS data was used.

<b>Incident:</b> Happy Camp Complex CA-KNF-005956	<b>Date/Op Period:</b> 8/18/14 Day Shift 0600-1800

### **Hazards & Risks**

**Changing Weather Conditions:** The IMET and FBAN are forecasting changing weather and fire behavior conditions over the next few days. Continue to monitor the weather on your Divisions with hourly readings and post lookouts to observe changing fire behavior. Establish LCES.

**Safe Anchor Points:** With the increasing number of spot fires becoming established, it is important to ensure that crews establish solid anchor points and constantly reinforce them. Having LCES in place is mandatory.

**Firefighter Health & Cumulative Fatigue:** Good nutrition and hydration play into staying healthy and alert while working in potentially dangerous situations. Eating fruits, vegetables & low sodium foods; while drinking water and electrolyte-replacing drinks will help in daily hydration and energy recovery. Get rest when you can with periodic breaks.

**Hazard Tree Safety & Felling Operations:** Follow the *Procedural Felling Operations* guide found on pg. 79 of your 2014 IRPG when performing felling ops. Apply sound risk management practices to assess the risk and need to drop high-risk trees. Reference *Hazard Tree Safety* pg. 22 in the IRPG for additional safety considerations. Fire weakened timber and snags are on ALL Divisions.

- **No wearing of flip-flops/sandals around Fire Camp. To and from the shower unit only.**
- **Use chock blocks on your apparatus while in the parking area.**
- **SLOW DOWN WHILE DRIVING !!**

## Incident within an Incident Action Plan

### **When the scope or complexity of the emergency exceeds division resource needs**

This plan is designed to identify the initial actions that should be taken by the first arriving personnel on a serious accident. This person may be a single resource, engine boss, or a crew boss. Accidents or incidents within an incident happen rapidly and require sound, calm initial decisions to handle the problem, while still focusing on the main incident. The following checklist provides some key thoughts and actions.

The first arriving person to any accident should notify their Division Supervisor, or the Div Sup assigned to that location.

### **Advise of the critical information needed:**

- **Accident scene safety assessment and advise incoming personnel**
- **Number of injuries and their severity**
- **Special equipment needs (extrication, low/high angle rescue, fire protection or suppression)**
- **Assist the injured as necessary without endangering yourself or other personnel**
- **Do not move trauma victims unless their safety is in jeopardy**
- **Utilize PINK pages of the Incident Response Pocket Guide (IRPG) for patient assessment/medical procedures**

### **Remain aware of surroundings and delegate personnel to monitor the main fire**

The **Division Supervisor** will assume command of the accident/incident scene upon arrival. The following list outlines the general duties and tasks that should be completed on most accidents/incidents.

1. Delegate division oversight to another Division Supervisor or other qualified person.
2. Request a clear frequency from Comm and consider switching to designated Emergency Tactical (Incident Comm will notify the MEDL who will initiate the medical plan for injuries)
3. Order/delegate resources appropriate for the accident/incident (crew EMT's, Line EMT's or Line Medics, rescue equipment, patient transport needs, manpower)
4. Notify Operations Section Chief and Safety Officer on all accidents/incidents.
5. Begin to document the event accurately and completely. Use ICS form 201 if the event is large or complex.
6. Protect the scene for Investigators

Reference the full Incident Medical Emergency Plan for additional

- Recommend appropriate security and investigative process
- Assess the need for critical Incident Stress Response

#### **Safety Officer**

- Provide for Safety personnel on scene as needed
- Recommend appropriate security and investigative process
- Assess the need for critical Incident Stress Response

### History of Happy Camp, CA—Know your local culture

Happy Camp is located at the top of California in Siskiyou County deep in the heart of the Klamath National Forest and on the banks of the Klamath River at the confluence of Indian and Elk Creeks.

The people of the Karuk Tribe, meaning “upriver” people, have lived here since before history.

In July 1851, a group of prospectors arrived from downriver, prospecting as they came and made camp here. They named the camp “Happy Camp” and that became the name of the town that grew up here. Many other sites of gold discovery became ghost towns, but Happy Camp endured.

Miners at Thompson Creek area saw a large, ape-like creature which scared the miners, so much that they wouldn't go back to work for days. Today modern “Bigfoot” teams camp out and look for the legendary creature with modern technology. If no large apes are found, they've at least had a great time camping in the forest.

When mining declined, the lumber industry became the chief occupation. The Klamath National Forest, Happy Camp District, was founded here in 1905. Happy Camp was well known as the “Steelhead Capital of the World!” Fishing and hunting, as well as the natural beauty, brought visitors, and when the road was completed in 1928 travel became easier.

The State of Jefferson Scenic Byway is a memorial to a movement to carve a new state from Oregon and California. Due to the lack of state maintenance of roads and services, a movement to secede from California and Oregon and become the “State of Jefferson” was begun in the 1940's. This “revolt” was every Thursday but ceased December 7, 1941 with Pearl Harbor when we rejoined our “united” country to help win a war. Mines from the area provided needed resources and the roads were improved to bring them out for the war effort.
