**WEATHER DISCUSSION:** Temperature will be about 5 degrees cooler today with slightly higher daytime RH...along with good RH recovery this morning. The low level airmass will also be more stable with heavy drainage smoke...breaking around 1600. Higher pressure aloft and light offshore wind is possible this weekend promoting a drying trend and perhaps some relief from the smoke. Winds will remain generally terrain driven.

## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER: 011</b>	<b>TYPE OF FIRE: Wildfire</b>
<b>FIRE NAME: Happy Camp Complex</b>	<b>OPERATIONAL PERIOD: 8/20/14 0600-1800 hrs</b>
<b>DATE ISSUED: 8/19/14</b>	<b>TIME ISSUED: 2000 hrs</b>
<b>UNIT: Klamath National Forest</b>	<b>SIGNED: Richard Gonzales, FBAN</b> 

### INPUTS

#### WEATHER SUMMARY:

See Weather Forecast for specific information

Sky: Mostly Sunny...heavy smoke trapped in valleys ... Temps near 92° ...RH around 30%....  
Winds (eye level)...Valley: up slope/up valley 2-5mph...Ridge: W 4-6 mph...w/ gust up to 12 mph...  
LAL 1... Haines 3...Inversion lifting approximately 1530 hrs

### OUTPUTS

#### FIRE BEHAVIOR

##### GENERAL:

The Fires main influence has been fuel and topography dominated. They are primary being driven by dead and down fuels. Fuels burning consist of Grass, Shrubs and Heavy Down (FM 1, 4, 10). Large dense stands of mixed Conifer are dominant throughout. Live Fuel Moisture is estimated at 90%. 1000 hr fuels are @ 8%. Headfire has displayed ROS @ 7-12 chains/hr with flame lengths of 4-8 feet. Single/group tree torching has occurred on all fires sustained crown runs were observed on the Falkstein fire. Heavy fuels are holding heat under canopy. ERC is predicted @ 66 today....Local threshold for large growth: 20' winds over 4 mph, RH less than 40%, Temps over 75\*, 1000 hr FM less than 13% (refer to Pocket Card in IAP).  
Scattered Tree Mortality is under 5%.  
Probability of Ignition (shaded) will be 50% into receptive fuels for the better part of the operational period.

### SPECIFIC

##### All Divisions:

The Fires will continue to display a moderate surface fire ROS and intensity. They will continue to back towards drainages and retain heat. Fires will make uphill runs as it establishes itself and slope/wind become into alignment. The potential for single/group tree torching will remain a threat due to ladder fuels being pre-heated by surface fire. Roll-out of burning material remains a high concern and has led to the growth of the Fires. Heavy fuels will continue to hold heat until extinguished or consumed. The forecasted weather will thread to a period of cooler temperatures and higher humidity...still, lighter fuels (1hr and 10hr) will continue to lose moisture and burn more readily. Increased fire activity will increase as solar heating and lifting of inversion becomes a factor. Direct attack along flanks with hose lines and hand crews are favorable. We could see spotting distance of up to 1/4-1/2 mile at the ridges.

**Frying Pan Fire:** will slowly back towards elk creek/china grade roads and move to the east along frying pan ridge...heads up for increase spotting as fire makes up hill runs that align with northerly winds. Watch out for fire establishing into drainage bottoms and aligning with slope/wind...pushing towards grider ridge.

**Falkstein Fire:** will continue to back/flank into grider creek towards the north...heads up on fire stacking up and moving towards the ridgeline west/south and making up-hill runs...fire will continue to work its way north/south along grider creek and south into stones valley.

##### AIR OPERATIONS:

Air support may be limited due to Inversion or diversion to new initial attack fire.

### SAFETY

- Identify your vulnerability on an advancing fire front when working hotspots
- Consider the potential for re-burning of available fuels
- Look for an increase in fire activity when winds shift in your division
- Evaluate the Fire's potential for upslope runs

## REMAIN VIGILANT AND INJURY FREE!

As the weather patterns continue to change and the fire grows in intensity, be more cognizant of your surroundings. This forest has a history of fatalities. Nothing is as important as you are.

### WEAR APPROPRIATE P.P.E.

- Full P.P.E during all operations, including mop-up.
- Stumpholes and roots systems are compromised resulting in a greater chance for a fall or burn injury.

### CREW BRIEFING

- Insure a proper crew briefing utilizing the IRPG.
- Identify safety zones early and often.
- Review the Dangerous Tree information on the opposite page.
- Work together to identify hazards to not just your crew, but others as well.

### HAZARDS

- Review Downhill Checklist.
- Utilize Lookouts and be aware of rolling debris.
- Steep terrain and with loose footing requires increased safe work distances.
- Underslung line.
- Flag suspected hazards that need mitigated and tie off the hazard by communicating to get it handled. Post a standby if others are working in the area to keep people away!!!

### ENVIRONMENTAL

- Heat: Emphasis needs to be placed on hydration.
- Be aware of signs and symptoms of heat related illness.
- Monitor yourself and your fellow crewmembers.

### OPERATIONS

- Be alert when working under helicopters.
- Be aware of civilian traffic that may be in the area.
- Be constantly aware of changing road conditions due to downhill rollout.

## **DANGEROUS TREE IDENTIFICATION TIPS**

Failure potential is a function of tree condition. There are three types of failure potential: **low, likely, or imminent**. Trees with likely or imminent potential to fail may be classed as danger trees depending on the work activity and whether the work activity is within the tree's potential failure zone.

In order to define the potential failure zones, it is necessary to determine which tree part is likely to fail: entire tree, tree top, branches or bark.

A tree may have a **likely potential to fail** if any of the following conditions exist. Here is a partial listing of symptoms and indicators.

- Root diseased but still alive.
  - Old lean that has not corrected itself.
  - Some undermined or severed roots.
  - Some heart, butt, or sap rot.
  - Cracks or structural defect associated with some decay.
  - Dead tops with some heart or sap rot.
  - Dwarf mistletoe bole swellings if they have decay that extends to an area less than **half** the bole diameter.
  - Fungus cankers on the bole when the canker width is less than **half** the bole diameter.
  - Forked tops and crotches associated with decay, cracks, splits, or callus ridges.
- Pitch or resin is not always associated with likely failure potential. Pitch is often a sign in a healthy tree when it is defending itself against pathogen or insect attack.
- Dead trees that are still sound.
  - Fire damaged or killed trees that are still sound.
  - Hardwoods with sap rot approaching half their diameter.

A tree may have an **imminent potential to fail** if it is so defective or rotten that it would take little effort to make it fail during project implementation. Trees with an imminent failure potential are much more likely to fail than those trees rated as likely to fail. Trees with an imminent potential to fail include those that have the following conditions.

- Root sprung.
- Recent lean.
- Missing bole wood due to fire or damage.
- Significant heart or sap rot.
- Loose bark.
- Dwarf mistletoe bole swellings if they have decay that extends to an area **more than half** the bole diameter.
- Fungus cankers on the bole when the canker width is **more than half** the bole diameter.
- Dead tops with significant sap rot.
- Hung up tops, limbs, or hung up trees.
- Dead trees that are not sound.
- Fire damaged or killed trees that are not sound.
- Trees with multiple defects.

## **Thunderstorm Safety Message and Procedures for a *LIGHTNING SAFETY ALERT***

Approaching thunderstorms may be noted by a sudden reverse in wind direction, a noticeable rise in wind speed, and a sharp drop in temperature. Rain, hail and lightning occur only in the mature stage of a thunderstorm.

Cloud to ground based lightning strikes increase sharply within fire areas according to IMETs. There is always a potential under the right conditions for Pyro cumulous lightning events as well.

Exercise situational awareness by observing the 30/30 rule. Refer to the IRPG page related to Thunderstorm Safety (Page 21 in the 2014 version/Green cover).

IMET will be monitoring the current weather and based on preplanned Decision Points will have the authority to issue a ***Lightning Safety Alert***. An announcement will be made by communications to all personnel and divisions about any anticipated watches, warnings or events.

For in camp personnel, a siren from on hand vehicles will be sounded for a minimum of 15 seconds a total of 3 times with a break in between. Should you hear this siren warning, seek shelter within a structure is possible.

If a permanent structure is not available, utilize the closest vehicle available. Remain as centered in the vehicle as possible remaining clear from windows.

Stay clear of tall trees, wire fences and utility lines.

Seeking shelter in a Tent is **NOT AN ACCEPTABLE** level of cover!!!

Once the event has been cleared by the IMET, an all clear shall be issued to commence normal operations via communications.

## Human Resource Message

### DON'T WORRY, BE HAPPY

Attitude drives so much of our behavior, is so innately a part of us, that we often don't see how it affects us, those around us and those most important to us. We've all been labeled at some point in our lives. Are you a "morning person" or do you "need your caffeine to get going"? Aren't these just labels for predictable behaviors?

Even though the labels may be accurate, they don't have to be the final descriptor of who we are. We can positively affect our conduct by working on our attitude, being aware that we have an attitude, and insuring our attitude positively contributes to the good of the order.

Gary has to work at being lighthearted.

Did you know that August is "Admit You're Happy Month"?

Did you know that week 3 in August is "Friendship Week"?

Isn't that about as perfect a set of facts as we could expect on an assignment to the Happy Camp Complex during week three of August?
