OUTPUTS

FIRE BEHAVIOR

GENERAL:

The Fires main influence has been fuel and topography dominated. They are primary being driven by dead and down fuels. Fuels burning consist of Grass, Shrubs and Heavy Down (FM 1, 4, 10). Large dense stands of mixed Conifer are dominant throughout. Live Fuel Moisture is estimated at 90%. 1000 hr fuels are @ 8%. Headfire has displayed ROS @ 7-12 chains/hr with flame lengths of 4-8 feet. Single/group tree torching has occurred on all fires sustained crown runs were observed on the Falkstein fire. Heavy fuels are holding heat under canopy.

ERC is predicted @ 66 today....Local threshold for large growth: 20' winds over 4 mph, RH less than 40%, Temps over 75*, 1000 hr FM less than 13% (refer to Pocket Card in IAP).

Scattered Tree Mortality is under 5%.

Probability of Ignition (shaded) will be 50% into receptive fuels for the better part of the operational period.

SPECIFIC

All Divisions:

The Fires will continue to display a moderate surface fire ROS and intensity. They will continue to back towards drainages and retain heat. Fires will make uphill runs as it establishes itself and slope/wind become into alignment. The potential for single/group tree torching will remain a threat due to ladder fuels being pre-heated by surface fire. Roll-out of burning material remains a high concern and has led to the growth of the Fires. Heavy fuels will continue to hold heat until extinguished or consumed. The forecasted weather will thread to a period of cooler temperatures and higher humidity...still, lighter fuels (1hr and 10hr) will continue to lose moisture and burn more readily. Increased fire activity will increase as solar heating and lifting of inversion becomes a factor. Direct attack along flanks with hose lines and hand crews are favorable. We could see spotting distance of up to 1/4-1/2 mile at the ridges.

Frying Pan Fire: will slowly back towards elk creek/china grade roads and move to the east along frying pan ridge...heads up for increase spotting as fire makes up hill runs that align with northerly winds. Watch out for fire establishing into drainage bottoms and aligning with slope/wind...pushing towards grider ridge.

Falkstein Fire: will continue to back/flank into grider creek towards the north...heads up on fire stacking up and moving towards the ridgeline west/south and making up-hill runs...fire will continue to work its way north/south along grider creek and south into stones valley.

AIR OPERATIONS:

Air support may be limited due to Inversion or diversion to new initial attack fire.

SAFETY

- Identify your vulnerability on an advancing fire front when working hotspots
- Consider the potential for re-burning of available fuels
- Look for an increase in fire activity when winds shift in your division
- Evaluate the Fire's potential for upslope runs
- **STOP...Stop Think Observe and Predict**

FIRE DANGER -- West Side KNF

Maximum, Average, and 43th Percentile, based on 12 years data

Moderate Extreme

Years to Remember: 2008 2010

Moderate Extreme

Fire Danger Area:

- ◆ 200, 202, 204, 208
- ◆ CA280 & CA281
- ◆ See below

* Meets NWCG Wix Station Standards

Fire Danger Interpretation:

- EXTRM (Extreme) -- Use extreme caution
- (Caution) -- Watch for change
- Moderate -- Lower Potential, but always be aware

Maximum -- Highest Energy Release Component by day for 2000 - 2011

Average -- shows peak fire season over 12 years (2204 observations) 43th Percentile -- Only 43% of the 2204 days from 2000 - 2011 had an Energy Release Component below 57

Local Thresholds - Watch out:

Combinations of any of these factors can greatly increase fire behavior:
 20' Wind Speed over 4 mph, RH less than 40%,
 Temperature over 75, 1000-Hour Fuel Moisture less than 13

Remember what Fire Danger tells you:

- ✓ Energy Release Component gives seasonal trends calculated from 2 pm temperature, humidity, daily temperature & rh ranges, and precip duration.
- ✓ Wind is NOT part of ERC calculation.
- ✓ Watch local conditions and variations across the landscape -- Fuel, Weather, Topography.
- ✓ Listen to weather forecasts -- especially W/IND.

Past Experience:

Large fires (>50ac) occur more frequently when BI exceed 68. Fires 50 acres and larger can readily increase in complexity
 Multiple lightning ignitions can overwhelm suppression resources. 2008 was an active fire year. 2010 was quiet.

Sawyers Bar, Somes Bar, Slater Butte, Blue Ridge, Oak Knoll, Slater Butte, Collins Baldy, Quartz Hill, Callahan #2, and Dutch-Indy RAV/S data was used.

SAFETY MESSAGE

INCIDENT NAME:
Happy Camp
Complex

DATE PREPARED
08/19/14

TIME PREPARED
2000 hrs

OPERATIONAL PERIOD: 08/20/14 0600-1800hrs

REMAIN VIGILANT AND INJURY FREE!

As the weather patterns continue to change and the fire grows in intensity, be more cognizant of your surroundings. This forest has a history of fatalities. Nothing is as important as you are.

WEAR APPROPRIATE P.P.E.

- Full P.P.E during all operations, including mop-up.
- Stumpholes and roots systems are compromised resulting in a greater chance for a fall or burn injury.

CREW BRIEFING

- Insure a proper crew briefing utilizing the IRPG.
- Identify safety zones early and often.
- Review the Dangerous Tree information on the opposite page.
- Work together to identify hazards to not just your crew, but others as well.

HAZARDS

- Review Downhill Checklist.
- Utilize Lookouts and be aware of rolling debris.
- Steep terrain and with loose footing requires increased safe work distances.
- Underslung line.
- Flag suspected hazards that need mitigated and tie off the hazard by communicating to get it handled. Post a standby if others are working in the area to keep people away!!!

ENVIRONMENTAL

- Heat: Emphasis needs to be placed on hydration.
- Be aware of signs and symptoms of heat related illness.
- Monitor yourself and your fellow crewmembers.

OPERATIONS

- Be alert when working under helicopters.
- Be aware of civilian traffic that may be in the area.
- Be constantly aware of changing road conditions due to downhill rollout.

DANGEROUS TREE IDENTIFICATION TIPS

Failure potential is a function of tree condition. There are three types of failure potential: **low, likely, or imminent**. Trees with likely or imminent potential to fail may be classed as danger trees depending on the work activity and whether the work activity is within the tree's potential failure zone.

In order to define the potential failure zones, it is necessary to determine which tree part is likely to fail: entire tree, tree top, branches or bark.

A tree may have a **likely potential to fail** if any of the following conditions exist. Here is a partial listing of symptoms and indicators.

- Root diseased but still alive.
 - Old lean that has not corrected itself.
 - Some undermined or severed roots.
 - Some heart, butt, or sap rot.
 - Cracks or structural defect associated with some decay.
 - Dead tops with some heart or sap rot.
 - Dwarf mistletoe bole swellings if they have decay that extends to an area less than **half** the bole diameter.
 - Fungus cankers on the bole when the canker width is less than **half** the bole diameter.
 - Forked tops and crotches associated with decay, cracks, splits, or callus ridges.
- Pitch or resin is not always associated with likely failure potential. Pitch is often a sign in a healthy tree when it is defending itself against pathogen or insect attack.
- Dead trees that are still sound.
 - Fire damaged or killed trees that are still sound.
 - Hardwoods with sap rot approaching half their diameter.

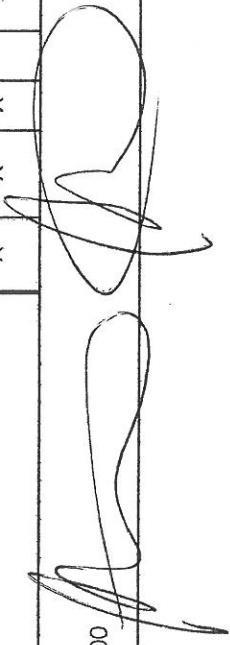

A tree may have an **imminent potential to fail** if it is so defective or rotten that it would take little effort to make it fail during project implementation. Trees with an imminent failure potential are much more likely to fail than those trees rated as likely to fail. Trees with an imminent potential to fail include those that have the following conditions.

- Root sprung.
- Recent lean.
- Missing bole wood due to fire or damage.
- Significant heart or sap rot.
- Loose bark.
- Dwarf mistletoe bole swellings if they have decay that extends to an area **more than half** the bole diameter.
- Fungus cankers on the bole when the canker width is **more than half** the bole diameter.
- Dead tops with significant sap rot.
- Hung up tops, limbs, or hung up trees.
- Dead trees that are not sound.
- Fire damaged or killed trees that are not sound.
- Trees with multiple defects.

Thunderstorm Safety Message and Procedures **for a *LIGHTNING SAFETY ALERT***

Approaching thunderstorms may be noted by a sudden reverse in wind direction, a noticeable rise in wind speed, and a sharp drop in temperature. Rain, hail and lightning occur only in the mature stage of a thunderstorm.

Cloud to ground based lightning strikes increase sharply within fire areas according to IMETs. There is always a potential under the right conditions for Pyro cumulous lightning events as well.

Exercise situational awareness by observing the 30/30 rule. Refer to the IRPG page related to Thunderstorm Safety (Page 21 in the 2014 version/Green cover).

IMET will be monitoring the current weather and based on preplanned Decision Points will have the authority to issue a ***Lightning Safety Alert***. An announcement will be made by communications to all personnel and divisions about any anticipated watches, warnings or events.

For in camp personnel, a siren from on hand vehicles will be sounded for a minimum of 15 seconds a total of 3 times with a break in between. Should you hear this siren warning, seek shelter within a structure is possible.

If a permanent structure is not available, utilize the closest vehicle available. Remain as centered in the vehicle as possible remaining clear from windows.

Stay clear of tall trees, wire fences and utility lines.

Seeking shelter in a Tent is **NOT AN ACCEPTABLE** level of cover!!!

Once the event has been cleared by the IMET, an all clear shall be issued to commence normal operations via communications.

Human Resource Message

DON'T WORRY, BE HAPPY

Attitude drives so much of our behavior, is so innately a part of us, that we often don't see how it affects us, those around us and those most important to us. We've all been labeled at some point in our lives. Are you a "morning person" or do you "need your caffeine to get going"? Aren't these just labels for predictable behaviors?

Even though the labels may be accurate, they don't have to be the final descriptor of who we are. We can positively affect our conduct by working on our attitude, being aware that we have an attitude, and insuring our attitude positively contributes to the good of the order.

Gary has to work at being lighthearted.

Did you know that August is "Admit You're Happy Month"?

Did you know that week 3 in August is "Friendship Week"?

Isn't that about as perfect a set of facts as we could expect on an assignment to the Happy Camp Complex during week three of August?

Jan Cawthon, Human Resource Specialist, 909-553-2829

ATTENTION FEDERAL TRAINEE'S

Are you going to be recommended for certification on this incident?

Or

Have you already been recommended for certification but still have your taskbook with you at this incident?

Your FQRC needs your taskbook with all the proper documentation so they can review it and submit it to the certifying official.

September 5 is the deadline for submitting applications to the R5 Fall Fire Hire

If you have worked hard all summer for an incident qualification that will get you to that next level, don't wait and miss your opportunity.

Come by and see me and I will get your completed taskbook back to your FQRC.
