Happy Camp Complex Weather Forecast

FORECAST NO: 9 D
 PREDICTION FOR: Friday Day Shift
 SHIFT DATE: August 22, 2014
 FORECAST ISSUED: 1900 August 21, 2014

NAME OF FIRE: Happy Camp Complex
 UNIT: KNF / SoCal 3
 Incident Meteorologist: Jeff Tonkin

WEATHER DISCUSSION: A dry upper trough will be moving across norcal this afternoon accompanied by about a 5 degree drop in temperatures today. There is still potential for stronger west and northwest winds at elevations above 4000 feet this afternoon. The driest air has moved east of the fire area thus daytime relative humidity should return to more seasonable levels of 20-25%. For the next 3-5 days the fire area will be influenced of high pressure aloft and the position of the thermal trough...periods of offshore flow will be observed...especially during the night and morning hours.

WEATHER FORECAST TODAY (FRIDAY DAY SHIFT):

OUTPUTS

FIRE BEHAVIOR

GENERAL:

The fire environment remains active under the current weather pattern and prolonged drying of fuels. Expect to see similar fire behavior as previous days but as fire spreads into new areas be aware of potential reaction to slope and wind. Alignment and spread direction may be different from what has been seen previously. Fire weakened snags and loose material will continue to present a safety concern and method for fire movement. Inversions and smoke shields will moderate fire behavior but be vigilant as dry conditions will still lead to active behavior.

Local threshold for large growth: 20' winds over 4 mph, RH less than 40%, Temps over 75*, 1000 hr FM less than 13% (refer to Pocket Card in IAP).

Scattered Tree Mortality is under 5%.

Probability of Ignition (unshaded) will be high(87%)

SPECIFIC

All Divisions:

The Fires will continue to display a moderate surface fire ROS and intensity. Fire will make uphill runs if aligned with slope and wind. The potential for single/group tree torching will remain a threat due to ladder fuels. Roll-out of burning material remains a high concern and is a main factor in fire growth. Heavy fuels will continue to hold heat until extinguished or consumed. Fire activity will increase with solar heating and the lifting of the inversion. Direct attack along flanks with hose lines and hand crews are favorable. We could see spotting distance of up to 1/4 mile at the ridges.

Frying Pan Fire: The main fire spread will continue to push out to the east, south and southeast. Heavy fuels will allow for persistent movement to the west into Copper Creek with backing and roll-out. Watch out for fire establishing into drainage bottoms and aligning with slope/wind.

Falkstein Fire: This fire has been under a smoke shield form the Frying Pan. The lack of solar radiation is masking the fire spread potential. Expect fire behavior to increase if the fire receives clear air. Otherwise, it will continue to back/flank into grider creek towards the north and south into stones valley.

AIR OPERATIONS:

Light winds will allow for good flying conditions once the inversion breaks. Expect the southern portion of the fire to remain hampered by smoke throughout the day, especially in deep drainages.

SAFETY

Be mindful of working in areas with unburned fuel between you and the fire. Several locations on the fire have poor visibility of the fire's edge. Post lookouts as necessary and identify escape routes.

FIRE DANGER -- West Side KNF

Maximum, Average, and 43th Percentile, based on 12 years data

Extreme
Moderate

Fire Danger Area:

- ◆ 200, 202, 204, 208
- ◆ CA980 & CA281
- ◆ See below
- ◆ Meets NWCG Wx Station Standards

Fire Danger Interpretation:

EXTREME -- Use extreme caution (caution) -- Watch for change
Moderate -- Lower Potential, but always be aware

Maximum -- Highest Energy Release Component by day for 2000 - 2011

Average -- shows peak fire season over 12 years (2204 observations)
43th Percentile -- Only 43% of the 2204 days from 2000 - 2011 had an Energy Release Component below 57

Local Thresholds - Watch out:

Combinations of any of these factors can greatly increase fire behavior:
20+ Wind Speed over 4 mph, RH less than 40%,
Temperature over 76, 1000-Hour Fuel Moisture less than 13

Years to Remember: 2008 2010

Extreme
Moderate

Fuel Model: G - Short-Needle (Heavy Dead)

Remember what Fire Danger tells you:

- ✓ Energy Release Component gives seasonal trends calculated from 2 pm temperature, humidity, daily temperature & rh ranges, and precip duration.
- ✓ Wind is NOT part of ERC calculation.
- ✓ Watch local conditions and variations across the landscape -- Fuel, Weather, Topography.
- ✓ Listen to weather forecasts -- especially WIND.

Past Experience:

Large fires (>60ac) occur more frequently when BI exceed 68. Fires 60 acres and larger can readily increase in complexity. Multiple lightning ignitions can overwhelm suppression resources. 2008 was an active fire year. 2010 was quiet.

Sawyers Bar, Somes Bar, Slater Butte, Blue Ridge, Oak Knoll, Slater Butte, Collins Baldy, Quartz Hill, Callahan #2, and Dutch-Indy RAWS data was used.

Responsible Agency: Klamath National Forest

HAPPY CAMP COMPLEX
SAFETY MESSAGE FOR DAY SHIFT
8/22/2014 0600 – 08/22/14 1800

Theme for the day: This is a heads up day for transition. As the fire is further developed for span of control, Divisions are changing and require a familiarization again for your work assignment. Pay attention to your communications!!!

PPE's: Continue to remain 100% compliant with the use of your PPE's. They are there for your safety and reinforce the ability for you to go home safely!

Stumpholes and root systems remain compromised resulting in a greater chance for a fall or burn injury.

Briefings: We have attended numerous divisional breakouts and are seeing outstanding information passdown. Please continue this trend. A well informed crew is a safer crew. Become familiar with the new Branch assignments.

Remember to review your communications plan and perform checks if moving divisions/branches.

Hazards: Steep Terrain is the prevalent feature for the area. Heavy fuel continuity and horrible footing provides extra hazards to you. Take the time to address your needs before you engage.

Danger Trees are everywhere. Be aware and of them, flag them and post a standby if necessary. Make sure to close the loop by reporting them to get them handled.

Environmental: Be cognizant of hydration needs, but also nutritional needs. We had a successful treatment and transport of Rhabdomyolysis. Even if you feel the need to not eat, nutrition is a key factor to limiting the effects of electrolyte imbalance.

Be aware of heat related illness. Keep an eye on each other and get help early if necessary.

Thunderstorm Safety Message and Procedures for a *LIGHTNING SAFETY ALERT*

Approaching thunderstorms may be noted by a sudden reverse in wind direction, a noticeable rise in wind speed, and a sharp drop in temperature. Rain, hail and lightning occur only in the mature stage of a thunderstorm.

Cloud to ground based lightning strikes increase sharply within fire areas according to IMETs. There is always a potential under the right conditions for Pyro cumulous lightning events as well.

Exercise situational awareness by observing the 30/30 rule. Refer to the IRPG page related to Thunderstorm Safety (Page 21 in the 2014 version/Green cover).

IMET will be monitoring the current weather and based on preplanned Decision Points will have the authority to issue a *Lightning Safety Alert*. An announcement will be made by communications to all personnel and divisions about any anticipated watches, warnings or events.

For in camp personnel, a siren from on hand vehicles will be sounded for a minimum of 15 seconds a total of 3 times with a break in between. Should you hear this siren warning, seek shelter within a structure is possible.

If a permanent structure is not available, utilize the closest vehicle available. Remain as centered in the vehicle as possible remaining clear from windows.

Stay clear of tall trees, wire fences and utility lines.

Seeking shelter in a Tent is **NOT AN ACCEPTABLE** level of cover!!!

Once the event has been cleared by the IMET, an all clear shall be issued to commence normal operations via communications.

Human Resource Message

DON'T WORRY, BE HAPPY

Attitude drives so much of our behavior, is so innately a part of us, that we often don't see how it affects us, those around us and those most important to us. We've all been labeled at some point in our lives. Are you a "morning person" or do you "need your caffeine to get going"? Aren't these just labels for predictable behaviors?

Even though the labels may be accurate, they don't have to be the final descriptor of who we are. We can positively affect our conduct by working on our attitude, being aware that we have an attitude, and insuring our attitude positively contributes to the good of the order.

Gary has to work at being lighthearted.

Did you know that August is "Admit You're Happy Month"?

Did you know that week 3 in August is "Friendship Week"?

Isn't that about as perfect a set of facts as we could expect on an assignment to the Happy Camp Complex during week three of August?
