Hough Complex

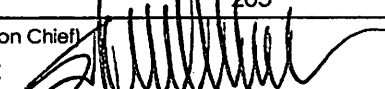

CA-PNF- 001324

(0511) P5HV99

AUGUST 22, 2013

Day Operational Period

0600 - 1800

INCIDENT OBJECTIVES	1. Incident Name Hough Complex	2. Date Prepared 8/21/2013	3. Time Prepared 2400															
4. Operational Period August 22, 2013 Day Operations: 0600-1800																		
5. General Control Objectives for the Incident (include alternatives) Management Objectives <ol style="list-style-type: none"> 1. Provide for firefighter and public safety as the highest priority. 2. Provide and coordinate protection of structures, timber lands, and infrastructure on public and private lands within the complex. 3. Provide timely information, notification and communications regarding fire activity and effects on air quality. 4. Minimize effects of fire and fire suppression activities on sensitive resources through effective use of resource advisors and close collaboration with cooperators and administering agencies. 5. Maintain a high level of collaboration with local communities, neighboring and cooperating agencies. 6. Minimize disruption to local economies with local communities, neighboring and cooperating agencies. 7. Provide IA response and resources for new starts through the Central Coast Incident Commander. Control Objectives Suppress fires within the complex in the smallest area that can be safely accomplished with available resources.																		
6. Weather Forecast for Period See Attached Weather Forecast																		
7. General Safety Message See Attached Safety Message

INCIDENT Weather Forecast

FORECAST NO: 2

NAME OF FIRE: Hough Complex

PREDICTION FOR: Thursday Day SHIFT

UNIT: Hough RD, Plumas NF

SHIFT DATE: Aug 22, 2013

SIGNED: Mike Smith

TIME AND DATE

Incident Meteorologist

FORECAST ISSUED: 1900 Aug 21, 2013

WEATHER DISCUSSION: An upper level low pressure system will be moving northward up the Norcal coast today bringing a continued threat of showers and thunderstorms through the afternoon hours. The thunderstorms are likely to be more isolated than on Wednesday as the low moves northward and upper flow becomes more southwest. As with any thunderstorms...strong downdraft winds and lightning can be expected. Outside of thunderstorms...the fire area will see a slightly cooler airmass with moderate humidity for late August. A slight increase in upper level southwest winds may be felt at some higher elevations as the low shifts northward. After sunset...the thunderstorm threat will end as a more stable southwest flow aloft moves into the region. Fair skies and more stable conditions are expected Friday

*** RED FLAG WARNING FOR THUNDERSTORMS THROUGH EARLY THURSDAY EVENING ***

WEATHER FORECAST:

WEATHER: Partly cloudy. A slight chance of showers or thunderstorms. Thunderstorm threat ending after sunset.

TEMPERATURES: High temperatures 85 to 92. .

HUMIDITY: Minimum humidity 20 to 25%.

20 FT WINDS:

RIDGETOP – East winds to 5 mph in the morning becoming southwest 5 to 10 mph after 0900. Some gusts to 15 mph in the afternoon.

SLOPE/VALLEY - downslope to downcanyon to 5 mph becoming Upslope to upcanyon 3 to 8 mph after about 0900.

STABILITY/INVERSION: Weak inversions breaking after about 1000. Slightly unstable aloft.

OUTLOOK FOR (Thursday Night): Partly cloudy in the evening then fair skies Thursday night. Overnight lows 55-63. Max RH recovery 55-75% ridges to lower elevations. Southwest ridgetop winds continuing through the night to 5 mph with gusts to 10 mph. Slope winds becoming downslope to downcanyon to 5 mph after 2100.

OUTLOOK FOR Friday: Mostly Sunny. High temperatures 88 to 94. Min RH 18 to 23%. Ridge winds southwest to 5 mph with occasional gusts to 10 mph. Upslope/upcanyon winds 3 to 8 mph on the slopes.

EXTRA INFORMATION: Sunrise 6:21 Sunset 7:51

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 5	TYPE OF FIRE: Wildfire
FIRE NAME: Hough Complex	OPERATIONAL PERIOD: Day Shift 8/22/2013
DATE ISSUED: August 21, 2013	TIME ISSUED: 2200
UNIT: Plumas National Forest	SIGNED: Stewart Turner FBAN 

INPUTS

WEATHER SUMMARY:

...RED FLAG WARNING IN EFFECT THROUGH EARLY THURSDAY EVENING...
Partly cloudy. A slight chance of showers or thunderstorms. Thunderstorms threat ending after sunset.
Maximum Temp 85°-92°, Minimum RH 20-25%, winds slope/valley upslope 3-8 mph in the afternoon, ridgetop southwest 5-10 mph gusts 15 mph,

OUTPUTS

FIRE BEHAVIOR

GENERAL:

With the good overnight recovery expect a slow start to the burn period. Fire behavior will be low, moderate, active, very active to extreme around the fire area. Expect to see single and group tree torching with short crown runs where fuels, topography and winds line up. Rollouts and spotting will be a problem contributing to the rapid spread of the fire. Outflow winds will increase fire behavior and could dramatically change the spread direction of established fires. Local threshold for fire weather: Winds greater than 6 mph, humidity less than 20%, temperature greater than 80°, and 10 hour fuel moisture less than 5%. **The Probability of Ignition will be 76%. The fine dead fuel moisture will be 4%. Currently the dead fuel moistures are low with the 1000 hour fuels around 8%. Expect spotting up to 1/3 mile.**

SPECIFIC:

Gusty winds around thunderstorms may cause erratic fire behavior. Aircraft may not be able to work because of thunderstorm activity. Don't count on aircraft being able to fly to help you out of a bad spot.

Ridge: Fire will continue to actively back with rapid upslope growth with outflow winds.

Johnson: Will continue to grow up the ridge and actively back down the slopes. Expect perimeter growth with outflow winds with active and very active fire behavior.

Evans: Upslope growth is expected with active fire behavior.

Expect new starts this afternoon from the predicted lightning and sleepers. Watch the sky and listen to the radio for weather updates. Outflow winds can increase the fire behavior and change the direction of spread in a short period of time.

Mop in the heavy fuels is very important. Turn the logs over, dig the stumps out paying attention to the larger fuels. Rekindle is very common when fuels are this dry.

AIR OPERATIONS: Smoke and thunderstorms may limit air operations in some divisions for a period of time.

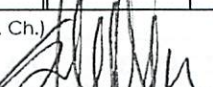

SAFETY

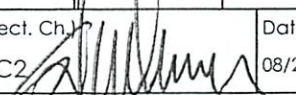

Risk Analysis

Initiate all actions based on current and expected fire behavior

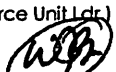

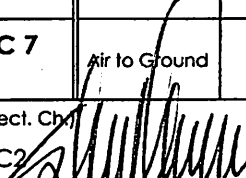

- *Can the resources you are replacing give you a thorough briefing?*
- *Can you observe the area, use scouts?*
- *Have escape routes and safety zones been thoroughly scouted?*
- *Are they marked for night use?*
- *Have potential dangers been located, can they be dealt with?*
- *Access to weather and fire behavior forecast?*

Hough Complex – Safety Message

INCIDENT: # CA-PNF-001324

DATE: 08-22-13

TIME: 0600 – 1800 DAY

Major Hazards and Risks:

Environment

- Thunderstorms (out flows) and lightning (page 19 in IRPG) Use 30/30 rule if it applies.
- Downdrafts, erratic winds changing direction
- Possible long range spotting
- Rugged steep terrain / Rolling rocks and other materials
- Watch for snags on the line and roads, mark them and make them known to your crews
- In Base Camp – we have had some branches come down, move your tent to open safe area

Human Factors

- When driving keep speeds at posted limits, seatbelts on and your headlights on
- Fatigue
- Dehydration is a factor – drink plenty of fluids and pace yourselves
- Lookouts, Communication, Escape Routes and Safety Zones – make sure they are in place...
- Don't forget to get an anchor point on any initial attack fire

Animals, Insects and Other Pests

- Ticks (Lyme Disease), Bees (aggressive), Mice (Hanta Virus), Rattle Snakes, Mountain Lions and Bears
- Numerous Deer on public roads during early morning and early evenings trying to hit your vehicle

Narrative: Lightning-30/30 rule: If you see lightning and hear the thunderclaps follow in less than 30 seconds, take the storm precautions on page 19 of the IRPG. Do not resume work in exposed areas until 30 minutes after storm activity has passed.

Yesterday, strong thunderstorms moved into the area with lightning, heavy winds and rain. That weather and fire behavior was nothing short of a large **WATCHOUT**. Fire behavior today will possibly be erratic. Ensure your escape routes and safety zones are established, well identified and known to all resources. Downdrafts, wind and rain have effected already weakened trees, so be alert for snags. Vegetation that held rocks and boulders in place has burned away. Even the light rains we received have destabilized them even more. Rocks, boulders, logs are all ready to roll down on your position. You can mitigate this hazard with LCES. **DO NOT get complacent, expect the unexpected tonight.**

****Gold mining was a big part of this area's history as well as other types of mining. Please be alert for vertical shafts, even horizontal shafts contain life threatening hazards. Do Not go in any mine to explore or for any other reason. If you find it FLAG it and get GPS coordinates.**

Questions

How did yesterday start, as far as the weather goes?

Do you remember how hot it was?

If confronted by the thunderstorms again today how will you act?

What are your trigger points?

What are your biggest concerns?

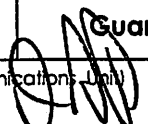

Incident Safety Officers: Tom Zeulner SOF2 / Rick Bertram SOF2 (T) Lee Mercer- Forest Safety Officer

(TZ)

HOUGH COMPLEX INCIDENT ANALYSIS (ICS 215a)

DIV	HAZARDOUS ACTIONS / CONDITIONS	MITIGATIONS / WARNINGS / REMEDIES
ALL	COMMUNICATIONS	<ul style="list-style-type: none"> • After cloning at ICP make sure to check your radio's operation
ALL	MINES	<ul style="list-style-type: none"> • Stay on assignment , do not wander off • Focus on the terrain while walking • Scan the area with your headlamp prior to walking in a direction • Stop often and look for irregularities in the terrain, - ex. Collapses GPS spot, contact division, flag it off and ensure others notified
ALL	HAZARD TREES	<ul style="list-style-type: none"> • Follow Hazard Tree Safety Guidelines IRPG p.20 • Limit number of personnel around snags and their exposure time; fallers must be qualified for trees being fallen. • Be especially alert around snags during wind events. • Check for hazard trees & "widow-makers. Look up and live. • Night time complicates hazard tree identification
ALL	HAZARDOUS WEATHER	<ul style="list-style-type: none"> • Watch for changes in wind direction, intensity • Observe build-up of clouds and be ready for downdrafts • Follow lightning protocol - IRPG P.19 • Slow down on wet roads and dirt roads, possibility of rain • Monitor command channel for thunderstorm warnings
ALL	FIRE BEHAVIOR	<ul style="list-style-type: none"> • Long Range Spotting has greatly increased Fire behavior, plan for increased ROS • Review "Severe Fire Behavior Potential" IRPG p.78. • Monitor current weather conditions and forecasts. Make sure all personnel receive thorough briefings every shift. • Maintain adequate escape routes and safety zones. Advise all personnel if these are compromised or changed. Set trigger points when appropriate. • Adhere to 10 Std Fire Orders, mitigate 18 situations that shout.... • Maintain Situational Awareness. LCES in place always.
ALL	FATIGUE	<ul style="list-style-type: none"> • Be alert for signs of fatigue and take breaks as necessary. • Maintain 2:1 work/rest ratio. • Monitor incoming resources for level of fatigue. • Drink plenty of fluids before, during and after your shift • Stay alert for signs of heat exhaustion
ALL	AIRCRAFT OPERATIONS	<ul style="list-style-type: none"> • Keep personnel out of drop zones. • Use air-to-ground frequency to communicate with aircraft. • Use clear, concise statements when directing aircraft. Use clock directions from pilot's perspective. • Don't engage in "heli-mopping" if possible. Eliminate unnecessary pilot exposure.
ALL	LINE CONSTRUCTION	<ul style="list-style-type: none"> • Ensure LCES in place prior to engagement IRPG p. 6. • Establish adequate safety zones IRPG p.7. • Use Downhill Line Checklist, IRPG p. 8. • Follow "Look Up, Look Down, Look Around" procedures IRPG p. 2-3 • Utilize Risk Management Process IRPG p.1.
ALL	INITIAL ATTACK	<ul style="list-style-type: none"> • Do the Risk Management process prior to any engagement • LCES will be in place during any operation. • This country requires you to LOOK UP, LOOK DOWN AND AROUND. • The weather can change instantly, always be observant. • Base all actions on current and expected fire behavior • Possible long drive times to Initial Attack assignments

8. MEDICAL EMERGENCY PROCEDURES

LINE EMERGENCY

Crew Supervisor to contact Division Supervisor with complaint and Location.

- Division Supervisor Contacts:
 1. Line EMT
 2. Communications Unit
- Communications Unit contacts:
 1. Medical Unit
 2. Operations
 3. Air Operations / Helibase
 4. Safety
 5. Liaison
- Division Supervisor will designate Point of Contact who will run emergency on command channel
- Communication Unit will clear command channel for emergency traffic
- Medical Unit
 1. Arrange proper transportation
 2. Notify receiving hospital of injury status.

BASE CAMP / ICP EMERGENCY

Contact Medical Unit with patient complaint/ condition and location. Medical Unit will respond to stabilize incident:

- Medical Unit contacts:

1. Communications	4. Operation
2. Safety	5. Crew Supervisor
3. Logistic	

INJURY REPORTING PROCEDURES

NATURE OF INJURY _____
 LOCATION OF PATIENT _____
 TRANSPORTATION REQUEST BY: AIR _____ GROUND _____
 AIR FREQUENCY: **Medical (Ch 15 on Incident Radio)**
 POINT OF PICK UP _____

Fire Information

Just a friendly reminder, when you are out in the community and are approached by the public, please answer only questions that you are certain of. If uncertain of a question asked, please refer the community to the Public Information Officers in the ICP.

Also, please advise the community of the following information resources:

InciWeb – www.inciweb.org

Twitter – Central Coast IMT7

and

Community Meeting

Wednesday, August 21, 2013 from 7:00 pm to 7:45 pm

at the Community Grange Hall in Taylorsville.

Thanks for your help,

CCIIMT7 PIOs
