INCIDENT WEATHER FORECAST

FORECAST NO: 31
 PREDICTION FOR: 24 Hour Shift
 SHIFT DATE: 09/18/21
 FORECAST ISSUED: 09/17/21 1840

NAME OF FIRE: Caldor
 UNIT: USFS El Dorado NF
 SIGNED: Mark Stubblefield

WEATHER DISCUSSION: A trough of low pressure moving southeastward through the Pacific Northwest will bring increasing southwest winds and moisture to the fire area today. A cold front will move across the area late tonight and Sunday with more wind, moisture, and a chance for rain showers. The best chance of rain showers is early to mid-morning. The winds will decrease Sunday afternoon. Surface high will build east of the fire Sunday night through Monday night with increasing easterly winds. This could create critical fire weather conditions in Branch I with rapid drying and strong easterly winds.

.....FIRE WEATHER WATCH WEST OF THE SIERRA CREST SUNDAY NIGHT-TUESDAY...

.TODAY...

Sky/weather.....Partly cloudy with increasing clouds and wind through the day. Thick smoke haze in the morning...clearing in the afternoon.

 Mixing height....near surface...becoming 6,000 ft AGL mid-afternoon.

.TONIGHT...Sky/weather: Mostly cloudy and windy. Slight (20%) chance of showers late evening and overnight.

Min temperature.....50 to 56 above 5000 feet and 58 to 64 below 5000 feet.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 2	TYPE OF FIRE: Vegetation
FIRE NAME: Caldor	OPERATIONAL PERIOD: Sept 18 th 24 Hour
DATE ISSUED: Sept 17 th	TIME ISSUED: 2000
UNIT: CA El Dorado National Forest/Lake Tahoe Basin Management Unit	SIGNED: Dan O'Connor Fire Behavior Analyst (FBAN)

WEATHER SUMMARY: See detailed Fire Weather Forecast in IAP

FUELS:

Fire areas include a range of conifer systems with Ponderosa, Jeffrey Pine, Incense Cedar, and manzanita in the lower elevations towards the west, transitioning up into an Upper Montane forest of Ponderosa, Lodgepole Pine and Red Fir closer to Lake Tahoe. Anticipate heavy fuel loading, drought stress, overstocked timber stands, and a lack of fire history to both the north and south of the current fire footprint. The El Dorado National Forest is currently classified as 'Extreme to Exceptional' drought by the US Drought Monitor, with Energy Release Components exceeding the 90th percentile, not far off all time high levels. Heavy dead and down fuels will likely burn completely, holding heat and actively consuming through all hours of the day. Fine dead fuel moisture is calculated at 4% or less.

EXPECTED FIRE BEHAVIOR: *Based on the Warmest, Driest, Windiest Conditions Forecasted*

<u>Maximum Spotting Distance</u> ¾ --1 mile <u>Probability of Ignition</u> 71 %	Fuel Type/Model	Maximum Rate of Spread (chains/hour)	Maximum Flame Length (feet)
	Timber understory (TU5-Overstocked and/or dense reprod)	Head 40-45 ch/hr Flank 25-30 ch/hr	Head 14-18 ft Flank 8-10 ft
	Timber litter (TL6-closed canopy, ground fuels)	Head 5-7 ch/hr Flank 3-5 ch/hr	Head 3-5 ft Flank 2-4 ft

General: Increased wind speeds will assist the fire in moving from the ground up into the crowns, especially on wind/slope aligned runs. The primary spread model is torching/spotting, so any fire that is able to elevate into the canopies has the potential to loft embers and create spot fires outside current containment lines.

SPECIFIC

Branch 1 Division Gulf will likely see the gusty SW winds along the river corridor, threatening to loft holdover heat source embers to the north where slope, aspect, and wind will support rapid fire growth. Low probability due to all the good work from ground crews, but high consequence area for spotting.

Branch 3

Divisions India and Mike do have scattered heat with smoldering and smoke production interior as well as in rocked out areas along the northern perimeters. These areas may see some wind blockage and will not be in alignment, but looking out ahead could be impacted by strong winds from the east after the system passes early next week. Communities along the Highway 50 corridor are another low probability/high consequence area if stubborn heat sources are able to find a path into the crowns with increased winds in the river corridor.

Divisions Quebec and Romeo have widespread scattered heat along the fire edge, with potential for ground fire to elevate into the crowns with support from gusty SW winds today. Fire that does become established with group torching or crown runs will likely cause long range spotting downwind.

Divisions Oscar and Papa do have high severity fire areas in the interior, but the edges are more mosaic severity so reburning and flare ups are still possible. Areas closer to Christmas Valley may be more exposed to SW winds due to terrain enhancement.

Night Operations: Strong winds may support torching, spotting, and fire growth where fire has elevated from the ground up into the canopies across the entire fire area.

AIR OPERATIONS:

Potential turbulent winds may limit ability for aircraft to support missions.

SAFETY:

Increased winds will do their best to bring quiet areas of the fire back to life, especially due to long term drought conditions in the fire area.

Health & Safety Message

Incident: CALDOR Fire CA-ENF- 024030	Date/Op Period: Day/Night Shift 9/18 -19/21

Hazards & Risks

Hazardous Materials: Working around burned out structures can expose you to smoke by-products often laced with chemical compounds not found in vegetation fires. Work up-wind and use water streams from a safe distance. Watch for propane tanks, gas lines, electrical wires, gas tanks and septic pits. Evaluate the structure for collapse potential. Review your IRPG.

Tactical Pause: Following a transition in leadership, it would be a good time to review some of the basic safety tenants of firefighting.

L. C.E. S:

- Are there a new set of Lookout eyes on the fire?
- Has the comm plan been changed? Is there Cell Coverage?
- Is the DIV/Branch you're assigned to the same or have things changed?
- Is that safety zone you had in your back pocket the last few shifts now miles away?
- Have hazards been scouted out?

Just a few thoughts to discuss with your crews.

Public Interactions: There may be an increase in public encounters between fire personnel and local residents within the fire area this coming weekend. Be aware of increased traffic flow on all the highways and forest roads. Area closures are in place but not everyone knows of them or chooses to abide by them. Be respectful of private property boundaries and make efforts to avoid confrontations. Remember that the local folks are dealing with us and this fire. Review some basic fire information and be ready to answer basic questions. **Do not guess or speculate. Tell only the FACTS!**

TAHOE BEAR SAFETY

Tahoe bears are American black bears; they can vary in color from tan, brown, black to blonde.

BEAR BEHAVIOR

-Tahoe bears are **not normally aggressive**, but they may be bold in food acquisition.

-Black bears will **generally avoid people**. Tahoe bears are often habituated— accustomed and indifferent to people. They may approach people and may not run from aversion actions.

-Signs of agitation may include: **teeth clacking, jaw popping, or swatting the ground with their front paws**. Habituated bears may also **bluff charge**—rush quickly toward people, stopping just shy of making contact.

WHAT TO DO

1) If you are approached by a black bear, **DO NOT RUN**. **Stand your ground, make noise and get big**. If attacked, fight back.

2) **Properly store and secure all food, drinks and trash**. No food in tents. No coolers inside vehicles. All trash in dumpsters (not next to or on top of). Lock dumpsters.

3) If situation escalates, call **Eldorado County Sheriff at 530-621-6600**. Only local LE should be engaged for aversion actions.

4) If you see an injured bear, report to the Wildlife Disaster Network at 1-800-942-6459.
