**Management Objectives**

- Provide for emergency personnel and public safety at all times.
- Ensure COVID-19 precautions and best practices are met at all times.
- Protect property, improvements, and infrastructure.
- Ensure coordinated, timely and accurate release of public information.
- Foster and maintain relationships with all cooperators and stakeholders.
- Protect economic, natural, cultural and heritage resources.
- Maintain fiscal accountability and keep costs commensurate with values at risk.

## FIRE DANGER -- FDRA 335 - Eldorado NF

Maximum, Average, and 70th Percentile, based on 22 years data

## Years to Remember: 2001 2004

Fuel Model: G - Short-Needle (Heavy Dead)

## Fire Danger Area:

- FDRA 335
- Fire Mx Zone: CAZ289
- 70th Percentile ERIC: T2
- Meets NWCG Mx Station Standards

## Fire Danger Interpretation:

**EXTREME** -- Use extreme caution

**Warning** -- Watch for change

**Moderate** -- Lower Potential, but always be aware

**Maximum** -- Highest Energy Release Component by day

for 1992 - 2013

**Average** -- shows peak fire season over 22 years (1991 observation)

**70th Percentile** -- Only 30% of the 4071 days from 1992 - 2013

had an Energy Release Component above T2

## Local Thresholds - Watch out! Combinations

of any of these factors can greatly increase fire behavior:

20+ Wind Speed over 5 mph, RH less than 22%,

Temperature over 84, 1000-Hour Fuel Moisture less than 9

4

## Remember what Fire Danger tells you:

✓ Energy Release Component gives seasonal trends

calculated from 2 pm temperature, humidity,

daily temperature & rh ranges, and wind direction.

✓ Wind is NOT part of ERIC calculation.

✓ Watch local conditions and variations across

the landscape -- Fuel, Weather, Topography.

✓ Listen to weather forecasts -- especially WIND.

## Past Experience:

Fires > 100 acres typically occur at an ERIC of T2 or greater. Most large fire growth occurs due to a combination of steep slopes, fuel conditions and winds. The majority large fires on the ENF occur late in the season when fuels have fully cured in conjunction with North wind events. Early season large fires have occurred on the ENF and are associated with years that have a lack of precipitation resulting in early season drier large fuels. ENF fire history is highlighted with fires that have a high resistance to a due to topography and fuels promoting high fire intensities and spotting. ### OUTPUTS

FIRE BEHAVIOR **\*\* Fuels and Fire Behavior Advisory in effect for Northern California\*\***

**GENERAL:**

Increasing winds and thunderstorms will affect the fire area causing an increased chance for spotting and fire runs. Torching trees can loft embers into green islands or over the control line causing spot fires to occur in the receptive fuels. Live and dead fuels throughout the fire area are critically dry and will remain very receptive to ignition despite any precipitation that may occur. Complete consumption of stumps and heavy down fuels will continue to occur. Deep hot ash pits should be expected. Should the fire escape the containment lines, the fire will display a high resistance to control.

Timber Litter– <b>Rate of Spread</b> up to 20 ft/mn	<b>Flame Lengths</b> 4-8 ft.
Understory– <b>Rate of Spread</b> up to 40 ft/mn	<b>Flame Lengths</b> 14-20 ft
Brush – <b>Rate of Spread</b> up to 150 ft/mn	<b>Flame Lengths</b> 12-20 ft.

**Probability of Ignition:** up to 85% **Spotting Distance:** Spotting up to .8 mile. (Peak gusts)

**Forecasted ERC:** 86 **1000Hr fuel moisture:** 6

**ENF Pocket Card Watch out Thresholds:** Combinations of any of these factors can greatly increase fire behavior. 20' Wind speed over 5mph, RH less than 22%, Temperature over 84, 1000 Hr fuel moisture less than 9.

*Fire behavior predictions are based on the hottest and driest period of the day. Rates of spread and flame lengths could exceed forecasted values.*

**SPECIFIC:**

BRANCH 1 & BRANCH 30... Smoldering material will continue to be found. Expect calls for service to continue.  
 BRANCH 10... Heavy fuels and duff will continue to burn out and smolder. Fire behavior will allow for direct tactics in the brush. Interior islands and green stringers will continue to burn out.  
 BRANCH 20... Interior islands, heavy downed fuels, and green timber stringers will continue to burn out and could threaten the control lines.

**AIR OPERATIONS:** Sunset: 1918 Sunrise: 0641

Low ceiling heights and gusty winds may limit air operations.

- Thunderstorm downdrafts will cause erratic winds, especially in complex terrain and, can bring down fire-weakened trees and snags.
- Smoldering ash pits and material will continue to be a source of heat, smoke, and service calls.
- Review Thunderstorm Safety in the IRPG

# Fuels and Fire Behavior Advisory

## Northern California

September 1, 2021 to September 15, 2021

**Subject:** Potential for extreme fire behavior due to critically low live and dead fuel moistures, very dry conditions resulting from persistent drought, minimal snowpack and spring precipitation, and elevated fire danger rating values across much of northern California.

**Discussion:** Fires burning in northern California are exhibiting extreme fire growth based on critical fuel conditions. Fire spread is fuel driven and does not depend on wind to spread. Events with wind have led to extreme rates of spread. Surface fuels are very receptive to embers. Long range spotting, area ignition, and group torching is occurring on large fires frequently.

**Difference from normal conditions:** Northern California is in a drought; currently with 90% at Extreme to Exceptional levels. The drought is expected to persist or intensify thorough out the fire season. Deficient rainfall and snowpack with early melt off has resulted in fuels that are below average in dryness, with record setting conditions for most areas.

### Concerns to Firefighters and the Public:

- Energy Release Component (ERC) at numerous weather stations set record maximums already this year and are running at or above the 97<sup>th</sup> percentile in most cases. Expect increased fire intensity and spread rates in these areas. Early season extreme fire behavior has been observed in both light and heavy fuels. **Anticipate increased spread rates, spotting, and active nighttime burning.**
- The combination of persistent drought and record-low rainfall and snowpack amounts has led to very low live and dead fuel moistures. Low 1000-hour fuel moistures have been evidenced by complete consumption of dead fuels on recent fires. Live fuel moistures in grasses, shrubs and trees, have already reached critical levels in many areas of Northern California due to limited green-up this spring. **Expect fires to ignite easier and spread faster. Do not expect fires to exhibit reduced fire behavior when entering areas of live fuels; anticipate increased spread rates and spotting.**
- Direct attack is often not feasible under regular diurnal wind conditions with ground resources. And aviation utilization is often insufficient in moderating rate of spread without immediate heavy ground resource response. **Anticipate higher resistance to control in all fuel types.**
- Already this year, Northern California has experienced large fire activity and multiple team deployments. California will likely experience an extended fire season. It is important to be mindful of and manage fatigue for all resources. **Everyone, every day, returns home safely.**

### Mitigation Measures:

- Local and inbound fire personnel need to be aware that fire behavior across the state is exceeding normal expectations for this time of the year. **Local briefings need to be thorough and highlight specific fire environment conditions. These include but are not limited to local weather forecasts, Pocket Cards, ERC's, live and dead fuel moistures.**
- Suppression actions need to be based on good anchor points, escape routes, and safety zones. **Remember LCES. Experienced lookouts are essential under these conditions.**
- Base all actions on current and expected behavior of the fire. **Augment initial attack resources as incident activity dictates.**

**Area of Concern:** Northern California except for the following Predictive Service Areas: North Coast and Bay Marine, west of Highway 101 in Mid-Coast to Mendocino and Diablo-Santa Cruz, and the north eastern portion of Far Eastside.

# SAFETY MESSAGE

*A minute focused on safety can last a lifetime...*

## Overhead Hazards – snags & green trees!

We say Look Up, Look Down, Look Around for many reasons. Stay alert for unstable timber – dead or green.

- Burned areas have unstable trees & naturally occurring standing dead hazards.
- Green trees can present hazards, so widen your search image when assessing potential risk.
- Drought conditions & low moisture causes soil to loosen around roots. It doesn't take much wind (if any) to tip very large trees.
- Recognize, mark, avoid or mitigate, & share known hazards trees. Use appropriate tools for mitigating: qualified sawyers are an option, but consider heavy equipment. "Flag and avoid" can be both a short-term and longer-term solution, when feasible.
- Watch the wind: varying speeds & directions may shake things lose – literally.

*Things change – have you updated your assessment of your area lately?*

### COVID-Complacency Check:

Did you know there are 4800 people assigned to this fire? That's more than in some towns...

Don't fall into old patterns while in camp, at briefings, in chow lines, or on the line!

Mask up & Space out!

**Stay COVID Aware!**  
**Everyone will thank you!**

### Driving: still the MOST dangerous thing we do!

- Conditions: winding roads, wildlife, low sun angle during commutes...
- Public roads: repopulation, utility work, school buses, fire traffic
- Routine: same routes over & over, eating/drinking, adjusting radio, speeds, passengers asleep...
- Demob: thinking of home, rushing, it's been a long fire season...

Over half of all crashes involve drivers ages 15-44: 1,000 people die **each day!** You may have thousands of miles under your (seat)belt without an accident – stay focused to make the NEXT thousand!

## DEMOBILIZATION PLAN - SUMMARY CALDOR FIRE INCIDENT CA-ENF-024030

### GENERAL INFORMATION

The Demobilization Plan is developed to facilitate the orderly removal and checkout of resources on the incident. By definition, surplus personnel are available for release if they have rested for a minimum of 8 hours, are cleaned up, outfitted and have a vehicle ready to depart to their next destination.

### GENERAL GUIDELINES

- **NO RESOURCES WILL LEAVE THE INCIDENT UNTIL AUTHORIZED TO DO SO BY THE DEMOB UNIT.**
- Efforts will be made to ensure that all released personnel arrive at their destination prior to 2200 hours.
- All Resources will arrive at the Demobilizations Unit at their scheduled time Only.
- All government and hired vehicles leaving the incident will have a safety inspection. If a vehicle is within 1,000 miles of a "B" service, it is the responsibility of the resource to contact Ground Support and have an oil change prior to their scheduled demobilization time.
- **All Rental Vehicles will receive a safety inspection prior to leaving the incident.**
- All trainees are to keep their time up to date and report to the Training Specialist with their task books and evaluations prior to completion of the demobilization process.
- All strike team leaders are responsible to call **North Ops at 1-530-224-2466** immediately upon being released from the incident

### RESPONSIBILITIES

**Unit Leaders** will declare resources excess to their **Section Chief**. **Section Chiefs** will declare excess resources to the Planning Section Chief through the **Resource Unit Leader**. This should be done 36 hours in advance of anticipated release. **Use the Declaration of Excess Resources sheet or General Message Form (ICS-213) to list all excess resources.** Include the resource name, request number, name of person, date and time of declared excess, and time in which the resource will be eligible to leave. Send to the **RESOURCE UNIT** where the resource will be determined to be surplus to the incident. Surplus resources will then be able to report to the **DEMOB UNIT**, receive a Demobilization Checkout Form (ICS 221), get the appropriate ICS 221 signatures, and then return the completed ICS 221 to the DEMOB UNIT prior to final release or reassignment. Resources are not to contact **South Ops** or the expanded dispatch center unless instructed to do so by the Demobilization Unit.

### RELEASE PRIORITIES

2. OES engines
3. Hired personnel and equipment
4. Other agencies (USFS, BLM, etc.)

## Human Resources Message

Caldor Fire

### Reporting Harassment

Harassment, or other forms of inappropriate misconduct, such as bullying, intimidation, etc., can sometimes go unreported. Employees may not know what to report, how to report, or who to report to. If this is the case, please come talk to us, and we'll help you out.

But there are other reasons inappropriate behavior may go unreported, including employees being fearful of:

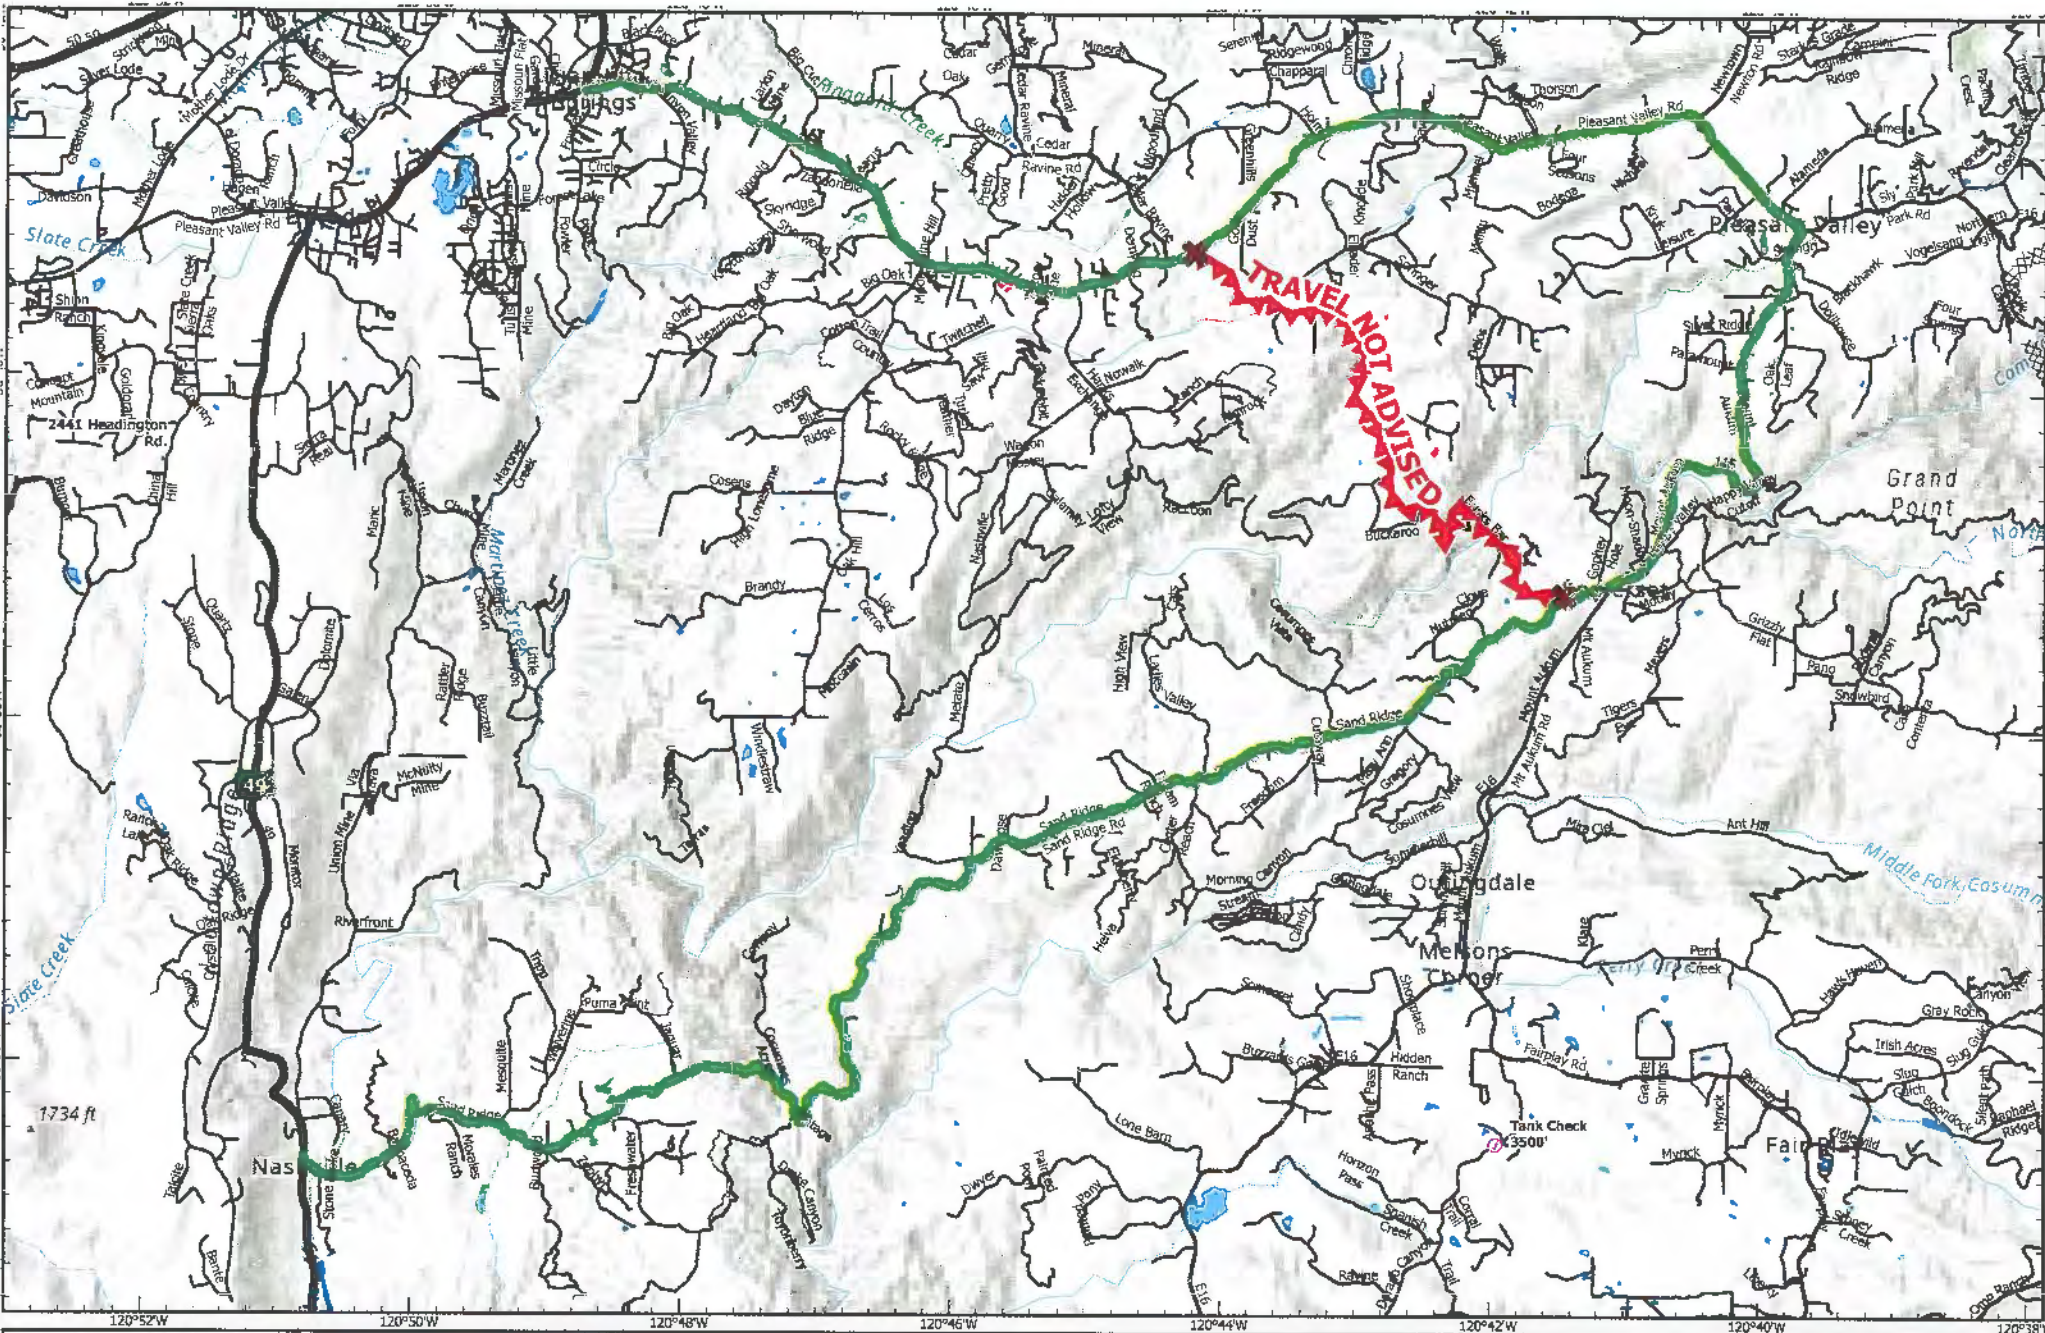

- losing their job
- being demoted
- being denied a raise or promotion
- being treated differently
- not being believed

While the above is understandable, we are fully committed to maintaining a policy of zero tolerance for these types of behaviors that are toxic to the work environment.

We can address issues here on the incident, and we can also follow up with your home units to ensure the behaviors are addressed once you demob, but we can't do anything about issues we aren't aware of. So please, if you see something, say something.
