4. OPERATIONAL PERIOD (DATE/TIME): 0700 10/1/2021 to 0700 10/2/2021

5. OBJECTIVES:

Leader's Intent

Implement a full suppression strategy on the fires within the River Complex. Values at risk include human safety, communities, private timberlands, critical infrastructure, associated improvements, and wilderness resources. Apply tactics that offer the highest probability of success commensurate with resource availability.

Management Objectives

- Provide for firefighter and public safety through hazard recognition and application of the risk management process.
- Coordinate public information with the Monument fire and other local fires to provide timely and continuous information to all affected agency partners, cooperators, and to the public.
- Coordinate suppression and repair activities with incident Resource Advisors to minimize impacts to wilderness, natural and cultural resources.
- Reduce risk and limit exposure to infectious diseases by minimizing large group settings, reinforcing social distancing, wearing face coverings, and handwashing.

Control Objectives

- Keep the Cronan fire within existing control lines.
- To prevent the Haypress fire from spreading to private property, surrounding communities, and impacting values at risk, keep the fire:
 - South of Cecilville Road
 - West of Highway 3
 - North of Long Valley Road, and
 - East of the 2020 Red Salmon fire footprint

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 57	TYPE OF FIRE: Wildfire
FIRE NAME: River Complex	OPERATIONAL PERIOD: October 01, 2021 - 24hr
DATE ISSUED: 9/30/21	TIME ISSUED: 2000
UNIT: CA-KNF, CA-SHF	SIGNED:  Typed/printed: Nic Elmquist (FBAN)

INPUTS

WEATHER SUMMARY: ** See Weather Forecast**

- **Today:** Temps 75^o-83^o, RH 10-30%, Cloud Cover: 0%, Chance of wetting rain: 0%
- **Tonight:** Temps 42^o-55^o, RH 45-65%, Chance of wetting rain: 0%

FUELS SUMMARY:

Dense mixed conifer, old-growth timber, heavy dead/down, mixed ground fuels
Fuel models best represented by 10, SH2, TL8, TU5, SH7, and GS2

OUTPUTS

FIRE BEHAVIOR

GENERAL:

- Three separate rain events since Sept. 9th have brought significant relief to the dry fuel conditions
- Annual grasses are starting to green-up from the recent precipitation events
- Most of the heat left around the fire is burning in heavy surface fuels

Fire Danger Indices – IRPG Page 67

Energy Release Component (ERC): Yesterday - 72, Today – 71

Burning Index (BI): Yesterday - 66, Today - 54

Maximum Probability of ignition (PIG) 80%

SPECIFIC:

Vegetation continues to dry out across the fire causing an increased production of visible smokes. This will continue through Monday where temperatures are forecasted to reach the low 90's with humidity in the teens. The shortening day length and the hard work by the crews have most of the hot areas isolated to the interior of the fire. There is increasing confidence of a significant weather pattern change in the middle of next week that will bring an extended period of cool and wet conditions. Prioritize your work based on these changing conditions.

Branch V: Continue to improve the existing control lines, utilizing helicopters for bucket support where needed. Winds are forecasted to increase and start blowing out of the southwest on Monday ahead of the approaching cold front. This wind will be adverse for Div. N and Div. O on the exposed upper elevations. Take advantage of the next several days to secure the portions which may be troublesome with the predicted stronger winds early next week.

Branch X: The great work by the crews is having a noticeable affect as heat signature above Little Mill Creek continue to decrease. Continue to post lookouts that can evaluate any smokes which pop up and seek and destroy those which seem to have potential to become troublesome in the next week before the wet weather arrives.

AIR OPERATIONS:

Sunrise 0707, Last Light 1920

Another day of blue bird conditions will bring clear air for air operations throughout the operational period.

SAFETY

The outstanding safety record on this fire is a testament to your attention to detail and ability to mitigate the risks associated with wildfire suppression in steep and rugged terrain. Keep up the good work and continue to communicate hazards to your crew and adjoining resources.

Safety Message

INCIDENT NAME: River Complex

DATE: 10-01-21

MAJOR HAZARDS:

Air Operations
Heavy Equipment
Snags/Hazard Trees
Animals on Roads

Steep Terrain
Rolling Materials
Driving
Fire Behavior

NARRATIVE:

Managing for Cumulative Fatigue

The River Complex has been going for over two months and many of you are on your second, third and fourth tours this season. We still have a lot of fire season left. Will you still be physically able to do this through October, maybe November? Not if you don't manage fatigue. Consider the following points for fatigue management so that you are able to finish fire season in good shape:

- The first step toward becoming a good decision maker on the fire line is to recognize that fatigue hampers your ability to make appropriate decisions - fatigue affects everyone. Fatigue has an impact on risk taking.
- Studies that focus on how lack of sleep affects work performance during long shifts agree for people to perform well they should average one hour of sleep for every 2 hours of work.
- Fatigue prevention includes hydration and temperature control. It is recommended for a person to drink at least two gallons of water per shift.
- Breaks are a hedge against fatigue. For example, without frequent 10 to 30 second rest breaks between work operations, fatigue can rapidly overtake you. Breaks of 10 minutes or more keep performance from declining. The number and length of breaks should increase after 8 hours, because fatigue builds through-out a shift.
- Smoke and carbon monoxide are present on the typical wildfire. Some exposure is unavoidable. Your objective must be to limit exposure. Too much exposure causes headaches, fatigue, drowsiness, some impaired motor performance, decision making, and cognitive functions.
- Pace yourself on the job. Heat tolerance differs among personnel. If you push too hard to keep up with others, you may not last the shift.

Effective Waterbars

When locating and building water bars, place them the right **distance** apart, at a **diagonal** to the fire line, so that they **divert**, then **discharge**, then **dissipate** the energy of the flowing water. Be sure to make them deep enough so they'll be durable, and that soil does **not block** the water bar outlet.

Recommended spacing for waterbars on fire lines.

Fire line slope %	Degrees	Maximum Distance Apart (feet)
1-5flat-3°.....	200
6-204-11°.....	125
21-4011-22°.....	60
41-6023-31°.....	40
>60	25

Waterbars should be at least two pulaskis (4-6 inches) wide and 12-24 inches high for handlines. For dozer lines, waterbars may be 2-3' high and the 5-6' across. They should survive the heaviest rain storm...think 6" rain in 36 hours.
