4. OPERATIONAL PERIOD (DATE/TIME): 9/23/2021 to 9/24/2121, Day 0700-1900 / Night 1900-0700

5. OBJECTIVES:

Strategic Framework

Implement a full suppression strategy on the fires within the River Complex. Values at risk include human safety, communities, private timberlands, critical infrastructure, associated improvements, and wilderness values. Apply tactics that offer the highest probability of success commensurate with resource availability.

Leaders Intent

Provide the highest level of customer service to all involved with or impacted by the River Complex. Ensure transparent, timely and accurate communication at all levels of the incident and strengthen relationships with cooperators. All incident assigned personnel should be prepared to take appropriate actions regarding:

- Professional behavior, conduct, and timely/effective communication.
- Personal safety and the safety of others, including driving slowly and defensively.
- Manage fatigue by taking breaks and maintaining work/rest cycles.
- Minimize risk and limit exposure to infectious disease by minimizing large group settings, social distancing, wearing face coverings, and handwashing.

Management Objectives

- Provide for firefighter and public safety through hazard recognition and application of the risk management process.
- Coordinate public information with Monument fire and other local fires to provide timely and continuous information to affected agency partners, cooperators, and to the public.
- Coordinate suppression activities with assigned incident Resource Advisors to minimize impacts to wilderness, natural and cultural resources.

Control Objectives

Keep the Cronan fire within existing control lines.

To prevent the Haypress fire from spreading to private property, surrounding communities, and impacting values at risk, keep the fire:

- South of Cecilville Road.
- West of the Hwy 3.
- North of Long Valley Road.
- East of the 2020 Red Salmon fire footprint.

INPUTS

WEATHER SUMMARY: More warming and drying as high pressure returns

- **Today:** Temps 76-86, RH 17-24%. Wind, NE 5-8 then E in the afternoon with gusts to 14 on the ridges, light upslopes begin late morning becoming 4-6 in the afternoon.
- **Tonight:** Temps 48-58, RH 30-40%, Wind E 4-8 on the ridges, Downslope/Valley 3-5 below the ridges.

FUELS SUMMARY: Dense mixed conifer, old-growth timber, heavy dead/down, mixed ground fuels. Fuel models best represented by 10, SH2, TL8, TU5, SH7, and GS2.

OUTPUTS

FIRE BEHAVIOR

GENERAL: ***Fuels advisory active for Northern California***

- Critically low Live & Dead fuel moistures. 100 and 1,000hr and Live Fuels remain dry.
- Fire behavior mostly in a backing/flanking alignment across the fire.
- Heavy dead fuels/timber-litter/light-flashy fuels are highly receptive and will continue to burn out.

ERC 80 (approaching 90th percentile). Probability of ignition 80-90% in the afternoon.

SPECIFIC:

Branch X: Fire spread will be mainly to the N and NE but areas open to the NE wind will burn towards the south. Expect slow rates of spread while fire remains in a backing alignment. Increased surface fire activity with 1-2 ft FL's. Chance for isolated group tree torching. Heavy fuels will produce intense heat. Pockets of heavy dead and down will hold heat for long periods and produce intense heat. Any spotting will be short range and mostly from rollout. Structure threat exists in the Callahan area. Tonight, expect longer burning periods as RH recovery will be poor.

Branch V: The fire remains in a backing and flanking alignment. Expect slow rates of spread while fire remains in a backing alignment. Increased surface fire activity with 1-2 ft FL's. Chance for isolated group torching. Any spotting will be short range and mostly from rollout. Structure threat to the Coffee Creek area still exists. Structure threat exists in the Eagle Creek Loop area. Many natural barriers to fire spread exist throughout the Branch, however, don't let your guard down, the fire will continue to creep through any available fuel. Tonight, expect longer burning periods as RH recovery will be poor.

Cronan Fire: No fire progression expected.

All Areas: Spotting from rollout will continue to be problematic. Group tree torching can produce spot fires out to ½ mile +. Slope-reversals are probable from any fire burning in drainage bottoms. Mop-up is extensive. Fire activity will moderate when it reaches the Red Salmon burn scar to the east.

AIR OPERATIONS: Smoke has the potential to impact visibility and affect aircraft availability along the south and east sides.

SAFETY

- Make sure Lookouts are posted in places where they can see potential spotting.
- Fire weakened timber poses a threat to personnel working in timber areas.
- Unburned fuel between you and the fire.

Fuels and Fire Behavior Advisory

Northern California

September 16, 2021, to September 30, 2021

Subject: Potential for extreme fire behavior due to continued critically low live and dead fuel moistures. Very dry conditions resulting from persistent drought, minimal snowpack and spring precipitation, periods of excessive heat have caused elevated to record fire danger rating values across much of northern California. Anticipated moisture could temporarily reduce some threat across the far north PSAs.

Discussion: Fires burning in northern California continue to exhibit extreme fire growth due to critical fuel conditions. Rapid fire spread can be fuels driven. Wind events have led to extreme rates of spread. Surface fuels are very receptive to embers. Long range spotting, area ignition, and group torching is occurring on large fires frequently.

Difference from normal conditions: Extreme to Exceptional levels of drought conditions continue to exist across much of Northern California. The drought is expected to persist or intensify through the rest of fire season. Deficient rainfall and snowpack with early melt off, coupled with periods of extreme heat has resulted in fuels that are critically dry, with record setting conditions for most areas.

Concerns to Firefighters and the Public:

- Energy Release Component (ERC) at numerous weather stations set record maximums already this year. Recent scattered rain has reduced some ERC values, but fuels are rebounding quickly. Extreme fire behavior has been observed in all fuel types and both live and dead fuels. **Continue to anticipate increased spread rates, spotting, and active nighttime burning.**
- The combination of extreme levels of persistent drought and record-low rainfall and snowpack amounts has led to very low live and dead fuel moistures. 1000-hour fuel moistures continue to trend at record low levels in many areas. Live fuel moistures in grasses, shrubs, and trees, remain at critical levels in many areas of Northern California due to limited green-up this spring. **Expect fires to ignite easier, spread faster and burn hotter. Reports of blistered paint on vehicles have been surprisingly frequent so far this year. Do not expect fires to exhibit reduced fire behavior when entering areas of live fuels; anticipate increased spread rates and spotting.**
- Direct attack is often not feasible under regular diurnal wind conditions with ground resources. Aviation utilization is often insufficient in moderating rate of spread without immediate heavy ground resource response. **Anticipate higher resistance to control in all fuel types.**
- Northern California continues to experience large fire activity and multiple team deployments and will likely experience an extended fire season. It is important to be mindful of and manage fatigue for all resources. **Everyone, every day, returns home safely.**
- The frequency of North to Northeast offshore wind events increases from mid-September into the fall. These strong winds are often accompanied by very low RHs and will pose an increased hazard when combined with this year's critically dry fuels conditions. **Watch for change.**

Mitigation Measures:

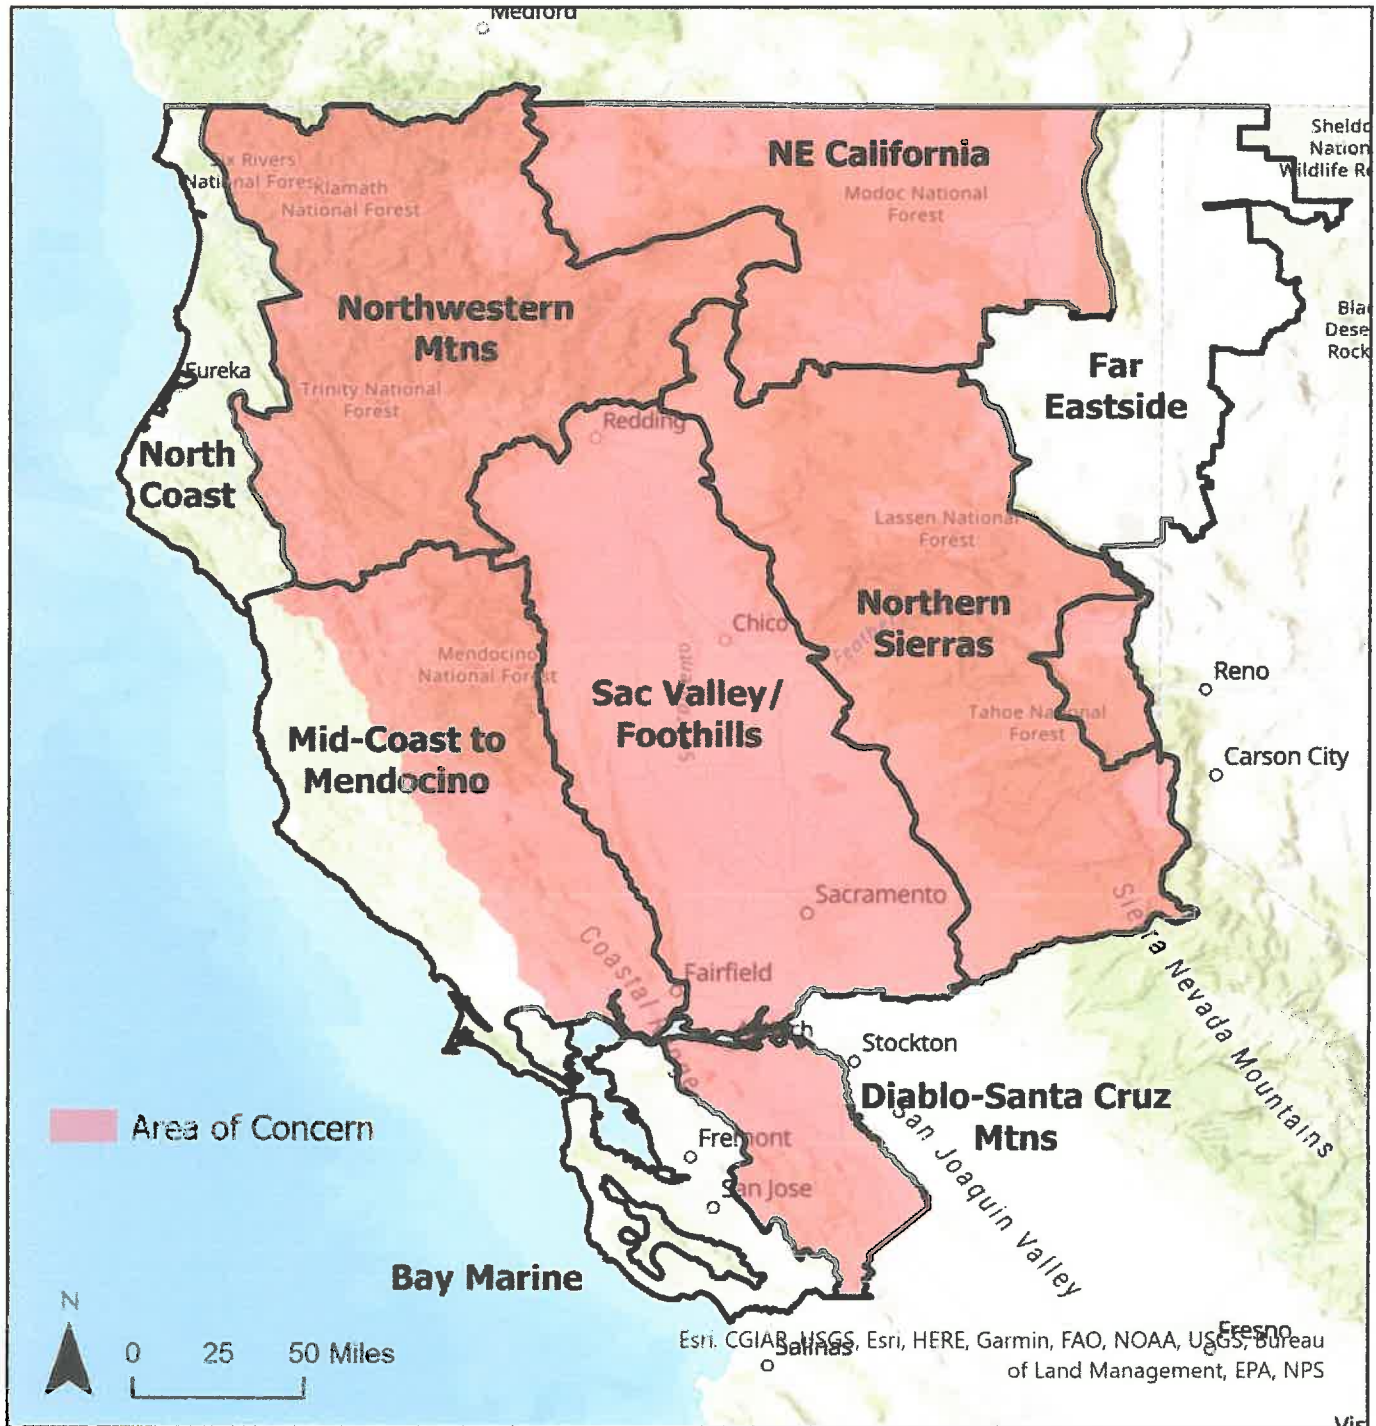

- Local and inbound fire personnel need to be aware that fire behavior across the state is exceeding normal expectations for this time of the year. **Local briefings need to be thorough and highlight specific fire environment conditions. These include but are not limited to local weather forecasts, PocketCards, ERC's, live and dead fuel moistures.**
- Suppression actions need to be based on good anchor points, escape routes, and safety zones. **Remember LCES. Experienced lookouts are essential under these conditions.**
- Base all actions on current and expected behavior of the fire. **Augment initial attack resources as incident activity dictates.**

Area of Concern: Northern California except for the following Predictive Service Areas: North Coast and Bay Marine, west of Highway 101 in Mid-Coast to Mendocino and Diablo-Santa Cruz, and the northeastern portion of Far Eastside.

Operation Period: 9/23-24/2021 Shift: 0700-0700

Emphasis on Communications

Working with Helicopter Drops

- Do you have good communications?
- Does the pilot have a clear understanding of the target?
- Are trees and snags in the drop zone?
- Are ground crews clear of the area?
- What is the turnaround time for the helicopter?
- Are people on the ground aware of the effects of the helicopter's rotor wash?

MY SAFETY

An important aspect of risk management is an individual's responsibility for one's own health & safety. Even with the best supervision, each individual firefighter will occasionally be required to make personal decisions concerning their safety.

- Remain fit for duty.
- Utilize personal protective equipment.
- Follow safe work practices.
- Ensure instructions are clearly understood.
- Maintain situational awareness at all times.

Do not expect someone else to be responsible for your safety. Take it upon yourself to make "My Safety" your number one priority.

FOCUS YOUR ATTENTION ON

- **Driving safely:** Getting to and from the work assignment may be one of the more hazardous activities on this incident.
- **Identifying Hazards:** Size up the work area to identify all potential and existing hazards associated with the environment and assignment.
- **Mitigate Hazards:** Remove hazards or avoid them. Utilize hazard control measures to reduce risk.
- **Use of PPE:** Please ensure the appropriate PPE is in use to protect from the hazards found in your work area.
