FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 53	TYPE OF FIRE: Wildfire
FIRE NAME: River Complex	OPERATIONAL PERIOD: September 27, 2021 - 24hr
DATE ISSUED: 9/26/21	TIME ISSUED: 2000

INPUTS

WEATHER SUMMARY: ** See Weather Forecast**

- Today: Temps 60^o-70^o, RH 45-55%.
- Tonight: Temps 43^o-53^o, RH 80-100%, Chance of wetting rain: 60%

FUELS SUMMARY:

Dense mixed conifer, old-growth timber, heavy dead/down, mixed ground fuels
Fuel models best represented by 10, SH2, TL8, TU5, SH7, and GS2

OUTPUTS

FIRE BEHAVIOR

GENERAL:

****Fuels advisory active for Northern California****

- Light precipitation, cooling temperatures, and increased overnight recovery will improve fuel conditions
- Fire behavior is mostly in a backing/flanking alignment

Energy Release Component (ERC) - Yesterday 84, Today - 59, Probability of ignition (PIG) <30%

SPECIFIC:

Great job by both air and ground resources holding the fire during the last several days of warm, dry, and breezy conditions. Today's fire behavior will be dependent on the arrival of the cold front which is forecasted to bring light precipitation over the area starting in the early afternoon hours. This cold front will bring significant relief to the fire environment. Cooler conditions and higher humidity, combined with great overnight recovery, will support continued direct line construction across the portions of the perimeter that can be accessed for the foreseeable future.

Branch X: Strong work getting line around the Tangled Blue Spot Fire and picking up the portions of heat along the Little Mill Creek drainage in Div. M. The change in weather may halt the backing fire coming down from Craggy Peak but will allow opportunities to continue direct line construction along the perimeter to the south where safe access is possible..

Branch V: Outstanding job with the direct line construction efforts coming out of Minnehaha Creek. Continue to pay particular attention to the flank south of Minnehaha as it backs down to the dry creek bed before the rain arrives. Anticipate improving conditions which will be favorable for progressing with your direct line construction for the next several operational periods.

AIR OPERATIONS:

Sunrise 0704, Last Light 1927

The predicted weather conditions will decrease ceiling heights and limit the ability for air support after approximately 1000. Plan accordingly for those resources being supported at the remote spike camps.

SAFETY

Although minimal rain is expected on the eastern perimeter of the fire, it may be enough to create slippery conditions on the dirt roads leading to your work assignment. Pay attention to the weather conditions and its impacts to your egress routes.

RIVER COMPLEX - SAFETY MESSAGE

Safety is a fulltime job; don't make it a part-time practice!

INCIDENT: River Complex

DATE: 9/27/2021

Major Hazards and Risks:

Driving

Hazard Trees

Extended Medical Extraction

Steep Terrain

Rolling Material

Rain and Cold Weather

Fatigue

Dehydration

Heavy Equipment

Direct and Indirect Line

Air Operations

Animals on Roads

Narrative: We may or not get rain and cold weather today and tonight...only time will tell. If we do get rain it may not be very much. But let's just think about the possibility that it's a lot of rain and very cold weather...are you and your crew prepared? What do you need to do now after briefing today to get prepared for a complete shift of rainy conditions with low temperatures? How will driving on wet roads in your work location change how you drive? Let's slow our driving down today if it is raining. Let's maybe take some dry clothes with us in case we get a lot of rain. Let your supervisor know if the rain hinders you from completing your work assignment.

Don't Drive Distracted

- We have had multiple reports of black cows on Hwy 3. If you drive distracted you may encounter them lying down in the middle of the highway (also Scott Mountain Rd near Hwy 3).

- That goes for all the other animals we encounter on the local roads. Deer, elk, bear, and wild horses among other miscellaneous farm animals.
- Another threat we have heard about is high speed motorcycles driving on Hwy 3 and the Cecilville Road.
- Reduce your speed during wet weather. Roads could be slick due to wet road grime. Your stopping distance could increase also.

REMS Team

If there is an injury, getting to this point in a rescue effort is dependent on your preparation.

(not this incident)

If you are not prepared with plans and options the golden hour will be difficult to meet if not impossible. Talk to the REMS team; get to know them and their equipment.

Train like you fight and fight like you train.

Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."

2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure.

Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."

Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° - 3° burns more than 4 palm sizes, heat stroke, disoriented.</i> <input type="checkbox"/> YELLOW / PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2° - 3° burns not more than 1-3 palm sizes.</i> <input type="checkbox"/> GREEN / PRIORITY 3 Minor Injury or illness. Non-Emergency transport <i>Ex: Sprains, strains, minor heat-related illness.</i>
