5. OBJECTIVES:

#### **Leader's Intent**

Implement a full suppression strategy on the fires within the River Complex. Values at risk include human safety, communities, private timberlands, critical infrastructure, associated improvements, and wilderness resources. Apply tactics that offer the highest probability of success commensurate with resource availability.

#### **Management Objectives**

- Provide for firefighter and public safety through hazard recognition and application of the risk management process.
- Coordinate public information with the Monument fire and other local fires to provide timely and continuous information to all affected agency partners, cooperators, and to the public.
- Coordinate suppression activities with incident Resource Advisors to minimize impacts to wilderness, natural and cultural resources.
- Reduce risk and limit exposure to infectious diseases by minimizing large group settings, reenforcing social distancing, wearing face coverings, and handwashing.

#### **Control Objectives**

- Keep the Cronan fire within existing control lines.
- To prevent the Haypress fire from spreading to private property, surrounding communities, and impacting values at risk, keep the fire:
  - South of Cecilville Road
  - West of Highway 3
  - North of Long Valley Road, and
  - o East of the 2020 Red Salmon fire footprint

# FIRE BEHAVIOR FORECAST FORECAST NUMBER: 54 FIRE NAME: River Complex DATE ISSUED: 9/27/21 UNIT: CA-KNF, CA-SHF FIRE BEHAVIOR FORECAST TYPE OF FIRE: Wildfire OPERATIONAL PERIOD: September 28, 2021 - 24hr TIME ISSUED: 2000 SIGNED:

#### **INPUTS**

Typed/printed: Nic Elmquist (FBAN)

#### WEATHER SUMMARY:

\*\* See Weather Forecast\*\*

- **Today:** Temps 54°-64°, RH 30-40%, Chance of wetting rain: 0% - **Tonight:** Temps 30°-45°, RH 60-80%, Chance of wetting rain: 0%

#### **FUELS SUMMARY:**

Dense mixed conifer, old-growth timber, heavy dead/down, mixed ground fuels Fuel models best represented by 10, SH2, TL8, TU5, SH7, and GS2

#### **OUTPUTS**

#### **FIRE BEHAVIOR**

#### GENERAL:

- Light precipitation, cooling temperatures, and increased overnight recovery will provide relief to fuel conditions
- Fire behavior is mostly in a backing/flanking alignment

#### Fire Danger Indices - IRPG Page 67

Energy Release Component (ERC): Yesterday - 48, Today - 57
Burning Index (BI): Yesterday - 5, Today - 54
Maximum Probability of ignition (PIG) 40%

#### SPECIFIC:

Although light, yesterday's precipitation, combined with the below normal temperatures and extended period of high humidity, will keep the fuel moistures up for the next several operational periods. Overall fire activity should be minimal and isolated to smoldering in the heavier dead ground fuels. These conditions will allow opportunity for success in continuing your direct line construction and mop-up efforts.

**Branch V:** Conditions look favorable for the extended period. Roll-out will be the biggest concern on the steep slopes where the line is mid-slope. Continue to utilize cup-trenches to mitigate this on any underslung line. It will be important to periodically patrol completed line to ensure a snag hasn't fallen or roll-out hasn't caused the line to be compromised. Utilize aircraft where needed to limit intensity in the areas which may not be able to get boots on the ground due to terrain. Keep up the strong work.

**Branch X:** Fire activity will be isolated to stump holes and heavier ground fuels. Continue to stay vigilant in your patrols and mitigate any heat found near the control lines or near unburned islands.

#### **AIR OPERATIONS:**

Sunrise 0705, Last Light 1925

The predicted weather conditions will keep ceiling heights low limiting the possibility of air support in the morning. Expect clearing to occur late morning which will provide adequate flying conditions for air operations.

#### SAFETY

Slippery conditions, especially in the burned areas, will persist across the fire for the next couple of days. Take your time and watch your footing.

#### RIVER COMPLEX - SAFETY MESSAGE

Think Safe...Work Safe...Be Safe

**INCIDENT:** River Complex

DATE:

9/28/2021

Major Hazards and Risks:

**Driving** 

**Hazard Trees** 

**Extended Medical Extraction** 

**Steep Terrain** 

**Rolling Material** 

Rain and Cold Weather

**Fatigue** 

**Dehydration** 

**Heavy Equipment** 

**Direct and Indirect Line** 

**Air Operations** 

**Animals on Roads** 

Narrative: The first Management Objective on the first page of the IAP is: Provide for firefighter and public safety through hazard recognition and application of the risk management process. We see this a lot on every management objectives list, but what does it mean really.

The word "Provide" is an action word and it means we, as a team are actively doing something to achieve a goal, in this case we are planning and working to make this incident the safest it can be.

The word "firefighter" in this case means everyone associated with this complex: people out on the line, people that support the people out on the line, incident management team members, the forest personnel associated with the incident, water tender operators, dozer operators, excavator operators, helicopter pilots and helibase support personnel, air attack personnel, air tanker pilots, incident security officers, mechanics...you get the idea. The word "public" means all the people near the complex that live here, recreate here, shop here, work here and drive through the area on local roads. The word "safety" means that "firefighters and the pubic" will not be harmed in any way while they do what they do. How do we protect the public? By controlling the fire when possible and evacuating public when the fire is threatening them and their homes. "Hazard recognition" means just that. Listing out all the possible hazards that can hurt or kill firefighters and the public. The "risk management process" is a way of putting those hazards in an order of probability and then we speak to those hazards in the ICS 215a Risk Analysis, by giving verbal messages at briefing and keeping the public informed of the hazards in Public Information notices and at Community Meetings.

#### **Driving After A Rain Storm**

#### Things to think about:

- Rock roll-out
- Slick highways and dirt roads
- DIVS or Safeties should check roads
- Slow down your speed when driving
- Standing water on roads
- Assess your work area

When the Vegetation is Gone

(Not on this incident)

Incident Safety Officers: Tom Zeulner SOF 2, Rick Bertram SOF2, Brent Kaiser SOF2

INITIAL ATTACK GROUP

# **Training Message**

#### **TRAINERS:**

If you leave the incident before your trainee, or if your trainee is no longer assigned to you, you will need to complete a performance evaluation for the time period your trainee <u>was</u> assigned to you.

#### **TRAINEES:**

Beat the Rush!!

In order to receive documented credit for your training assignment – you must close out with the Training Specialist before you Demob. When as much work (as possible) has been completed in your PTB for this incident – Conduct the "close-out" process with TNSP to save you time at DMOB

Submit/Upload the following during the "exit interview"

- A completed and signed ICS 225 or 226 Performance Evaluation
  - A completed Exit Interview Form
