WEATHER SUMMARY: **** See Weather Forecast****

- **Today:** Temps 80^o-94^o, RH 8-25%, Cloud Cover: 0%, Chance of wetting rain: 0%
- **Tonight:** Temps 48^o-58^o, RH 30-50%, Chance of wetting rain: 0%

FUELS SUMMARY:

Dense mixed conifer, old-growth timber, heavy dead/down, mixed ground fuels
Fuel models best represented by 10, SH2, TL8, TU5, SH7, and GS2

OUTPUTS

FIRE BEHAVIOR

GENERAL:

- Three separate rain events since Sept. 9th have brought significant relief to the dry fuel conditions
- Annual grasses are starting to green-up from the recent precipitation events
- Most of the heat left around the fire is burning in heavy surface fuels
- Areas of unburned vegetation near heat sources exist near Sugar Pine Butte, Minnehaha Crk, and Little Mill Crk

Fire Danger Indices – IRPG Page 67

Energy Release Component (ERC): Yesterday - 75, Today – 76
Burning Index (BI): Yesterday - 64, Today - 69
Maximum Probability of ignition (PIG) 80%

SPECIFIC:

Strong work by the air and ground resources has the heat along the perimeter of the fire diminishing each operational period. There is a lot of sweat equity invested into the River Complex since it began on July 30th. There are several days left of dry weather conditions before the predicted weather change begins Tuesday. The typical breezy southwest winds will start Monday ahead of the weather system. Continue to strengthen, secure, and patrol the control lines. Be deliberate with your actions, continue to post lookouts, and finish strong.

Branch V: Crews continue to squeeze the remaining heat out of the problem areas and tie in the last pieces of control line in Div. N. Patrol and/or keep eyes on the steep slopes where the threat of roll-out will exist for the next several days.

Branch X: The dead surface fuel above Little Mill Creek in Div. M will continue to hold heat and smoke production will increase each afternoon. The heat is interior and appears to be isolated to the burning of downed logs. Evaluate the threat to control lines and which ones, if any, need to be addressed.

AIR OPERATIONS:

Sunrise 0710, Last Light 1917 (2 min. shorter day length)

Forecasted clear skies will allow for another full day of air support if needed.

SAFETY

Be aware where you are working relative to others on steep slopes. Reduce the amount of people working on the hillside and call out any rolling material you may cause to notify those below.

SAFETY MESSAGE

INCIDENT NAME:
River Complex CA-KNF-006385

Operational Period:
October 3, 2021

Life First – Everyone Goes Home

MAJOR HAZARDS AND RISKS:

Hazardous Trees: Be alert of snags due to involvement in fire, mortality and drought. You are working in a very hazardous area with numerous snags, keep an eye on the trees, stay diligent and flag hazardous areas.

Communication: This is a complex incident, difficult terrain with steep canyons. Make sure you have good communication with adjoining divisions and use human repeaters when needed. Do it before you need it in an emergency.

Hydration/Nutrition/Fatigue: Drink plenty of fluids throughout the day and eat accordingly. Address dehydration and fatigue concerns immediately upon symptom onset. You can dehydrate even in cool weather.

Escape Routes/Safety Zones: Even though the fire activity is very minimal always be prepared. Build good safety habits by always addressing LCES even when fire activity cant be seen. Be prepared for anything. Every fire starts as a spark.

Transportation: Reduce speeds through the local communities. Stay vigilant for wildlife on the Hwy 3 on Scott Mtn and Ceciville Rd. Be ready for heavy equipment being transported on Hwy 3 and Cecilville Rd. We've had a couple of close encounters.

Heavy Equipment: Always ensure the operator sees you when working around the equipment. Remember they will not be able to hear your radio traffic. Do not approach machinery until the operator acknowledges your presence.

Aircraft: Use caution when working around or under aircraft. Watch for falling debris from trees when employing water dropping operations.

Rolling Rock/Debris: Utilize good spacing and post lookouts in hazardous areas.

Maintain Situational Awareness: Although most of our operations are around mop up, suppression repair and some direct line construction the fire still contains many hazards that can seriously alter your quality of life. Watch out for each others safety and well being at all times. Slow down and ensure you have a good plan that everyone around you knows about.

Incident Safety Officers: Rick Bertram SOF2, Tom Zeulner SOF2, Brent Kaiser SOF2

What is Short-Haul?

The intent of the Emergency Medical Short-haul Program is to ensure the appropriate use of short-haul capabilities, by means of providing medical care to a person in need as well as extract and transport to definitive medical care.

The Short-haul EMTs are trained and equipped to the Basic Life Support (BLS)-level. Short-haul helicopters are not equipped to provide Advanced Life Support (ALS); the primary goal is to facilitate patient stabilization, transport and delivery to ALS as rapidly as possible.

Helitack crews capable of emergency medical short-haul primarily perform functions in support of fire suppression: reconnaissance missions, crew transport, water drops, etc. Short-haul is an additional capability supporting work in the field.

Short-haul may be used under the following circumstances:

- A patient has a threat to life, limb or eyesight, or another serious illness/injury that warrants short-haul extraction
- When a ground-based evacuation would expose personnel and/or patient to greater risk

Ordering considerations

Does the urgency of the patient's condition require getting medical personnel to the accident scene as quickly as possible?

Is traversing the terrain to/from the accident scene pose a significant risk to ground personnel and patient?

No safe landing sites available within reasonable distance to accident scene?

Do you have a contingency plan identified? Extreme environmental factors preventing the use of a helicopter?

If ordering Short-haul, consider also requesting a Life flight/Ground Ambulance (ALS) to transport the patient to definitive care following the short-haul mission.

Information needed

- Air-to-Air / Air-to-Ground Frequencies
- Geographic location (GPS coordinates)
- Ground Contact
- Other aircraft over incident
- Known hazards
- Nature of the incident
- Patient weight
- Medical Incident Report

(Perspective from the medical emergency site)

Expect the Following

Recon flight

(the helicopter will then leave to reconfigure)

1 or 2 rescuers

(at least one qualified as EMT or higher)

Backboard & Medical gear

All equipment needed for extraction screamer suit & bauman bag (see images below)

Bauman Bag

Screamer Suit

The Bauman Bag accommodates a patient packaged on most backboards, TRS, SKED, & litters

The Screamer Suit is used for patients not requiring the use of a backboard

Effective Waterbars

When locating and building water bars, place them the right **distance** apart, at a **diagonal** to the fire line, so that they **divert**, then **discharge**, then **dissipate** the energy of the flowing water. Be sure to make them deep enough so they'll be durable, and that soil does **not block** the water bar outlet.

Recommended spacing for waterbars on fire lines.

Fire line slope %	Degrees	Maximum Distance Apart (feet)
1-5flat-3°.....	200
6-204-11°.....	125
21-4011-22°.....	60
41-6023-31°.....	40
>60	25

Waterbars should be at least two pulaskis (4-6 inches) wide and 12-24 inches high for handlines. For dozer lines, waterbars may be 2-3' high and the 5-6' across. They should survive the heaviest rain storm...think 6" rain in 36 hours.

Use the following items to communicate situation to communications/dispatch.

1. CONTACT COMMUNICATIONS / DISPATCH (Verify correct frequency prior to starting report)

Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."

2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure.

Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."

Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness. Evacuation need is IMMEDIATE <i>Ex: Unconscious, difficulty breathing, bleeding severely, 2° – 3° burns more than 4 palm sizes, heat stroke, disoriented.</i> <input type="checkbox"/> YELLOW / PRIORITY 2 Serious Injury or illness. Evacuation may be DELAYED if necessary. <i>Ex: Significant trauma, unable to walk, 2° – 3° burns not more than 1-3 palm sizes.</i> <input type="checkbox"/> GREEN / PRIORITY 3 Minor Injury or illness.
