- Coordinate public information with the Monument fire and other local fires to provide timely and continuous information to all affected agency partners, cooperators, and to the public.
- Coordinate suppression activities with incident Resource Advisors to minimize impacts to wilderness, natural and cultural resources.
- Reduce risk and limit exposure to infectious diseases by minimizing large group settings, reinforcing social distancing, wearing face coverings, and handwashing.

Control Objectives

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 55	TYPE OF FIRE: Wildfire
FIRE NAME: River Complex	OPERATIONAL PERIOD: September 29, 2021 - 24hr
DATE ISSUED: 9/28/21	TIME ISSUED: 2000

INPUTS

WEATHER SUMMARY: ** See Weather Forecast**

- **Today:** Temps 65^o-75^o, RH 20-30%, Cloud Cover: 5%, Chance of wetting rain: 0%
- **Tonight:** Temps 38^o-52^o, RH 45-65%, Chance of wetting rain: 0%

FUELS SUMMARY:

Dense mixed conifer, old-growth timber, heavy dead/down, mixed ground fuels
Fuel models best represented by 10, SH2, TL8, TU5, SH7, and GS2

OUTPUTS

FIRE BEHAVIOR

GENERAL:

- The third round of precipitation which occurred over the fire on Sept. 27th is bringing relief to the dry fuel conditions
- The position of the fire's perimeter has it in a backing alignment with heat sources decreasing each day

Fire Danger Indices – IRPG Page 67

Energy Release Component (ERC): Yesterday - 63, Today – 67

Burning Index (BI): Yesterday - 53, Today - 54

Maximum Probability of ignition (PIG) 60%

SPECIFIC:

We are in a slow warming and drying trend through the weekend. The recent rain combined with shortening day lengths, are keeping the burn window each day to a minimum. Today should be another day of low fire activity with fire behavior isolated to creeping/smoldering in the dead surface fuels. Expect to see a slight increase in fire activity each day this week. Given the position of the fire on the slope and the lack of any forecasted weather events, crews should be successful holding the existing control lines and continuing with direct line construction.

Branch V: The flank of fire that is backing down towards Little Mill Creek in Div. M is stalled due to the weather conditions. This portion of the fire will need to be monitored for an extended period due to the proximity of some unburned pockets of vegetation. Look for opportunities to secure any portions which can be safely accessed. Continue to focus your mop-up and patrol to the portions of the fire which have underslung containment lines.

Branch X: Fire activity will be isolated to stump holes and heat holding in the heavier surface fuels. Continue to stay vigilant in your patrols and mitigate any heat found near the control lines or near unburned islands.

AIR OPERATIONS:

Sunrise 0706, Last Light 1924

Expect clear conditions for air operations to support ground resources for the entire operational period if needed.

SAFETY

It is easy for a decrease in fire activity to bring about complacency. Given the size, duration, and terrain of the River Complex, there is an outstanding safety record. Current fire activity supports a slower operational tempo. Look up, look down, look around before engaging in your work assignment. Take your time and be deliberate with your actions.

Short-Haul Operations

CAPABILITIES

- During a Short-Haul the helicopter can insert Short-Haulers into an area with tight canopy cover, technical terrain or simply a place a helicopter cannot land.
- Available haul line lengths range from 100 feet to 250 feet
- Short hauler and or medical gear can be delivered to the medical scene even if extraction by short-haul is not necessary.

ORDERING

- EMT or Medical Incident IC determines medical extraction is required.
- Utilize the Medical Incident Report (MIR)
- Confirm estimated time of arrival and frequency.
- Be prepared to give incoming aircraft site selection information: hazards terrain wind and brief patient update, patient weight.

ON SCENE

EXPECT THE FOLLOWING

- 1 or 2 rescuers (at least one qualified as an EMT or higher)
- Backboard (if not already on scene)
- All equipment necessary for extraction

MISCONCEPTIONS

- Short-Haul is not a last resort
- Short-Haul is not just for trauma patients
- A 'green patient' shouldn't be short hauled, false, if a green patient is in 'red' terrain that could pose a hazard to crews trying to extricate them, Short-Haul is an appropriate choice.

PROCESS: During the insertion and extraction process ground personnel must be clear of the area. The helicopter will fly to the latitude and longitude provided, contact ground personnel with the patient utilizing the identified air-to-ground frequency. Upon completion of the short-haul recon and size up, a patient update will be communicated from the ground and the aircraft will depart the area and fly to a landing zone (LZ) to configure for short-haul operations. The helicopter will be monitoring the appropriate air-to-ground, air guard and victor frequencies. From this point, ground resources should only contact the helicopter in case of an emergency.

BAUMAN BAG

The Bauman Bag accommodates most backboards. A patient on a backboard, TRS, SKED or litter will be inserted into the Bauman Bag for extraction with an EMT short-hauler.

SCREAMER SUIT

Patients not requiring spinal immobilization will be extracted in a Screamer Suit with an EMT short-hauler.

***Do not hesitate to package the patient with on scene medical gear.**

RIVER COMPLEX - SAFETY MESSAGE

LIFE FIRST, EVERYONE GOES HOME

INCIDENT: River Complex

DATE: 9/29/2021

Major Hazards and Risks:

Driving

Hazard Trees

Extended Medical Extraction

Steep Terrain

Rolling Material

Cold Weather

Fatigue

Dehydration

Heavy Equipment

Direct and Indirect Line

Air Operations

Animals on Roads

Narrative: As we start to move into mop up and suppression repair in some areas, it is important to be just as alert during these functions as it is suppression. Although fatigue probably set in for you long ago you must push yourself to stay engaged and constantly assess the risks around you. For those of you who are familiar with Mount Everest and its fatal tragedies, you know the same amount or more of deaths occur on the way down from the summit as going up to the summit. Wildland firefighting is the same way in some aspects. There are just as many if not more injuries after the fire quiets down and moves into other phases as there is in the actual firefight. Please stay vigilant for yourself and those around you. Remember you are the most important resource to us and your family.

Working with and around HEAVY EQUIPMENT

- Stay at least 100' in front of and 50' behind equipment or 2.5 times the timber height.
- No one but the operator should ride on the equipment.
- Never approach it until the operator sees you signals you over and the blade or implements are lowered and idled down.
- Avoid walking under where the equipment is working.
- Ensure operator can see you at night. Use a headlamp and or glow stick.
- Establish visual and radio communication prior to engaging.
- Communicate all hazards to operator.
- Take responsibility for your safety and others around you.

Ex: "Communications, Div. Alpha. Stand-by for Emergency Traffic."

2. INCIDENT STATUS: Provide incident summary (including number of patients) and command structure.

Ex: "Communications, I have a Red priority patient, unconscious, struck by a falling tree. Requesting air ambulance to Forest Road 1 at (Lat./Long.) This will be the Trout Meadow Medical, IC is TFLD Jones. EMT Smith is providing medical care."

Severity of Emergency / Transport Priority	<input type="checkbox"/> RED / PRIORITY 1 Life or limb threatening injury or illness.
