FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 2	TYPE OF FIRE: Wildland
FIRE NAME: Sky	OPERATIONAL PERIOD: 6/30 24 Hour
DATE ISSUED: 6/29/2021	TIME ISSUED: 1900
UNIT: Lassen National Forest	SIGNED: /s/ Dan O'Connor
	Typed/printed: Dan O'Connor FBAN

INPUTS

WEATHER SUMMARY:

Hot and dry conditions will continue through the week over interior Northern California. Isolated afternoon thunderstorms possible each day over the Sierra Nevada. Thunderstorms may contain gusty wind with little associated precipitation.

Temperatures 80-90 // Relative Humidity low 20's // Thunderstorm development east of the fire area

OUTPUTS

FIRE BEHAVIOR

GENERAL:

***Northern Sierra is experiencing Exceptional drought conditions following the 2020/2021 winter
**1000 hour fuels are calculated to be 8% or less, which is a record low for June*

The fire is currently burning in an area that has no recorded fire history. Anticipate heavy dead and down fuels that hold onto heat for an extended amount of time. Heavies will likely fully consume and will be very receptive to spotting.

If the fire were to become established outside of containment lines, be especially heads up for areas of dense brush and ladder fuels that will rapidly escalate fire spread into the canopies, contributing to further spotting.

Morning winds out of the east may be enhanced within the Philbrook Creek draining, so be aware of any holdover heat through the night on the southern portion of the fire.

Fuel Models	Timber Litter (TL5)	Timber/Understory (TU5)	Shrub (SH5) // IA
<i>Estimated Flame Lengths</i>	Backing 0-1' Flanking 1-2' Head 2-4'+ Outflow 4-5'++	Backing 4-6' Flanking 6-8'+ Head 8-12'+ Outflow 15-20'++	Backing 10-12' Flanking 14-16' Head 16-20' Outflow 25-30'
<i>Estimated Rates of Spread</i>	Backing 3 ch/hr Flanking 4 ch/hr Head 5 ch/hr+ Outflow 17 ch/hr++	Backing 6 ch/hr Flanking 9 ch/hr Head 11 ch/hr+ Outflow 32 ch/hr++	Backing 40 ch/hr Flanking 60 ch/hr Head 70 ch/hr Outflow 225 ch/hr

SPECIFIC:

All areas: Further growth is not anticipated at this time, but be aware of very long burn down times and potential for spotting across containment lines into decadent fuels.

Initial Attack: Fires are exhibiting rapid rates of spread when enhanced by fuels, winds, or terrain this year.

Night Shift: Another night of poor relative humidity recovery, so anticipate several hours of potential isolated torching and spotting across containment lines.

AIR OPERATIONS

Complex terrain, very high temperatures, and afternoon thunderstorm activity could increase turbulence over the fire area.

SAFETY

Fires across Northern California are currently exhibiting extreme fire behavior and resistance to control efforts. Keep up the good work to ensure this fire does not have any opportunities to come back to life.

Health & Safety Message

Incident: Sky Fire CA-LNF-003531	Date/Op Period: Day/Night Shift 6/30/21-7/1/21

Hazards & Risks

Off Road Use: With the coming 4th of July holiday, you can expect increased forest visitor use and ORV traffic around the fire area. Use caution while driving and watch for surprise incursions into the fire area from the public. Post traffic lookouts if needed.

Fire Weather: The weather outlook is for continued very hot temperatures and dry conditions with an *excessive heat warning* issued for the area through Wednesday. Monitor the weather and take hourly readings and make changing trends known on the radio. Consider the 'Take 5 at 2:00pm' motto to manage fatigue and re-evaluate your tactics based on observed weather and fire behavior.

Medical Plan: Take time to review the medical plan and the medical incident report (aka the 8 line). Evaluate a response plan for your assigned division in the event of a medical emergency and brief it to your crews. Scout out potential landing sites for air evacuations and consider response and extraction times in your planning.

Air Operations: With air operations over the fire comes a unique set of hazards and risks. Reference the blue pages in your IRPG. Consider mission need and aviation risk factors. Establish good communications with the aircraft and ensure ground personnel are aware of drop zones during retardant and water dropping operations.

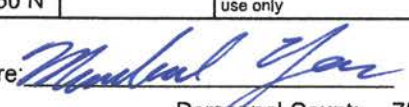

Air Crew members: Make careful calculations for loads, aircraft performance and weather factors.
