# MCFARLAND FIRE – SAFETY MESSAGE

INCIDENT: # CA-SHF-001175

DATE:9/1/2021 TIME: 0700-1800

## **Fight Attitude**

- One common reason for firefighter injury in the latter stages of a fire is when the firefighter throws her/his mind into neutral and doesn't think about the work they are doing. It's been a fast ramp up season so far. So when we are tired and have an attitude we are not thinking about how to do the job right. Couple this with fatigue, then we really have a "watch out situation".
- Keep your mind engaged and attentive to the task. Continually ask yourself if you are doing the job safely, the way you were trained. Keep an eye on your co-workers too. If you see them doing something that is unsafe, "you need to say something immediately" about the unsafe act.

## **See Something, Say Something, Communicate Safety!**

- *Take Charge* of assigned resources.
- *Motivate* firefighters with a "can do safe" attitude.
- *Demonstrate Initiative* by taking action in the absence of orders.
- *Communicate* by giving specific instructions and asking for feedback.
- *Supervise* at the scene of the action.

## **Learn From Today**

- Give, and demand, a quality briefing every shift.
- Speak up, ask questions, listen and communicate.
- Plan ahead.
- Evaluate the day's activity at the end of shift.
- Adjust the plan, based on what you learn.

CIIMT-11 SAFETY GROUP:/S/Tom Sherman-John Bates

## **Mop Up Operations**

Balance the risk of exposure to hazards against the Mop Up objective potentially achieved.

- Monitor fatigue, take breaks during shifts when it's appropriate.
- Provide motivation to workers to maintain situational awareness and avoid complacency.
- Evaluate mop up distances against what is safe and necessary.
- Stay focused to the tasks at hand.
- Review and follow "Look Up, Look Down, Look Around" procedures.

### Effective Waterbars

When locating and building water bars, place them the right **distance** apart, at a **diagonal** to the fireline, so that they **divert**, then **discharge**, then **dissipate** the energy of the flowing water. Be sure to make them deep enough so they'll be durable, and that soil does **not block** the water bar outlet.

**Recommended spacing for waterbars on firelines.**

Fireline slope %	Maximum Distance Apart (feet)
1-5	200
6-20	125
21-40	60
41-60	40
>60	25

*Waterbars should be at least 2 pulaski (4-6 inches) widths wide and 12-24 inches high for handlines.*
