FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 28	TYPE OF FIRE: Wildfire
FIRE NAME: McFarland	OPERATIONAL PERIOD: August 29, 2021 Day Shift
DATE ISSUED: August 28, 2021	TIME ISSUED: 1900
UNIT: CA-SHF-001175	Prepared: Dan Felix, FBAN 

INPUTS

**** See Fire Weather Forecast for discussion and specific weather. ****

WEATHER SUMMARY: Sunny, hot, dry and smokey.

Temp: Highs 94-97 degrees.

RH: Minimum 9-12%.

Winds: West-northwest 6-11 G20 becoming upslope/upcanyon east-southeast late morning.

GENERAL

Fuels in most of the fire area are timber understory, some timber litter at the upper elevations, transitioning to brush and grass at the lower elevations. with areas of brush mostly on the east side. Fire Danger Indices have been quite high, Energy Release Component between 90th and 97th percentile, 1000-hour are at or near the 97th percentile. This area is at critical levels for Live Fuel Moisture, i.e., 90% in Manzanita. This and the current low Relative Humidity make all these fuels very receptive to ignition from spotting. Spotting distance up to 0.2 miles along ridgetops during top wind gusts.

Specific areas of concern:

DIV AW – Expect minimal fire activity.

DIV E – Winds will generally be in your favor today, however, terrain directed winds could kick up areas of heat that may remain.

DIV I/L – Expect fire activity to be minimal. However, light fuels in this area will be susceptible to spotting from any remaining heat sources.

DIV S & Sly Fire – Remaining scattered heat near uncontrolled line could get more active underpredicted winds, however, there will be little opportunity to cause significant spread in the old burn areas.

Air Operations: Smoke and haze may adversely affect operations until the afternoon.

SAFETY

Continued hot and dry weather, along with very dry fuels, will support fire growth if any new start or spotting occurs.

REDUCING RISK WHILE DRIVING

- Keep your seat belts on, keep your eyes on the road.
- Drive defensively, anticipate traffic where you have poor lines of sight.
- Drive posted speed limits on HWY 36, through ICP, and around the local communities.
- Use headlights and warning lights when dusty conditions are creating poor visibility.
- Watch for rolling material that may be blocking the roadways.

Be sure all elements of your safety plan are in place prior to engagement

Hazardous Tree Indicators:

- Strong winds.
- Disease or bug-kill timber.
- Trees and duff have been burning for an extended period.
- High-risk tree species (rot and shallow root system oaks, redwoods).
- Numerous down trees.
- Dead or broken tops and limbs overhead.
- Accumulation of downed limbs.

Fatigue = Lowered Situational awareness.

PPE: Please recognize that in low stress situations like mop up, it is easy to over-look the importance of wearing the appropriate PPE include eye protection.

Work Area: Familiarity with your work area can result in a lowering of awareness, especially as conditions change.

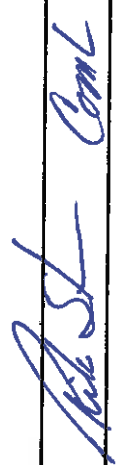

Fatigue: Cumulative Fatigue is a condition that sneaks up on us. Be sure to get your 2:1 work rest and hydrate continuously.

Effective Waterbars

When locating and building water bars, place them the right **distance** apart, at a **diagonal** to the fireline, so that they **divert**, then **discharge**, then **dissipate** the energy of the flowing water. Be sure to make them deep enough so they'll be durable, and that soil does **not block** the water bar outlet.

Recommended spacing for waterbars on firelines.

Fireline slope %	Maximum Distance Apart <u>(feet)</u>	<i>Waterbars should be at least 2 pulaski (4-6 inches) widths wide and 12-24 inches high for handlines.</i>
