Very HOT and DRY conditions. Slight chance of DRY THUNDERSTORMS Wednesday into Thursday as weak monsoonal moisture pushes through the region. Surface winds will remain terrain driven. Ridge level winds will continue to battle directions during the day.

Day

Max. Temperatures- 95°-105° Min. Humidity- 8 to 14% Winds- Upslope to 8 mph/Gusts to 12 mph later

Night

Min. Temperatures- 60°-65° Max. Humidity- 45 to 55% Winds- Upslope to 8 mph, Gusts 18 mph early

OUTPUTS

FIRE BEHAVIOR

GENERAL:

- Increased sun exposure will equate to earlier burn periods... and **More Unstable Air!**
- Increased sun exposure predictably flips the switch on this fire... **Got "blue" skies?**
- Intense heat remains along the entire perimeter. **Respect all alignments of slope and wind!**
- Winds will battle for dominance during the hottest part of the shift, plan for multiple directions!!
- Firing an in-turn on a mid-slope road? Engage safely....brief specifics on wind, slope and fuel!
- All fuel size classes are very **DRY**, very **AVAILABLE**, very **RECEPTIVE**...

SPECIFIC:

All Divisions: *****Fuels and Fire Behavior Advisory- Posted for Northern California*****

Flame Lengths- 4 to 8 ft. in Grass, Up to 20 ft. in Brush... Diminishing after midnight

Rate of Spread- 20 chains/hour in Grass, Up to 40 chains/hour in Brush... Diminishing overnight

Spotting Distances- Up to .25 miles from Grass/Brush, Up to 1 mile in Timber (From Torching)

Probability of Ignition- Over 90% at the peak of the burn period, Diminishing to <40% overnight

AIR OPERATIONS:

Sunrise: 06:15

Sunset: 20:15

Expect poor smoke dispersion before the inversion breaks by late in the morning. Mixing heights start out at less than 400 feet; rise to 11,000 feet with daytime heating; then return to less than 400 feet after sunset. Anticipate terrain induced turbulence in the Trinity River corridor, especially during peak hours of afternoon heating.

SAFETY

Identify Trigger Points Early in the Shift.....and Respect Them!

Expect Areas Where Wind and Terrain Align to Produce Surprisingly Rapid Rates of Spread!

Fuels and Fire Behavior Advisory

Northern California

August 2, 2021 to August 16, 2021

Subject: Potential for extreme fire behavior due to critically low live and dead fuel moistures, very dry conditions resulting from persistent drought, minimal snowpack and spring precipitation, and elevated fire danger rating values across much of northern California.

Discussion: Fires burning in northern California are exhibiting extreme fire growth based on critical fuel conditions. Fire spread is fuel driven and does not depend on wind to spread. Surface fuels are very receptive to embers. Long range spotting, area ignition, and group torching is occurring on large fires frequently.

Difference from normal conditions: Northern California is in a drought; currently with 90% at Extreme to Exceptional levels. The drought is expected to persist or intensify through out the fire season. Deficient rainfall and snowpack with early melt off has resulted in fuels that are below average in dryness, with record setting conditions for most areas.

Concerns to Firefighters and the Public:

- Energy Release Component (ERC) at numerous weather stations set record maximums already this year and are running at or above the 97th percentile in most cases. Expect increased fire intensity and spread rates in these areas. Early season extreme fire behavior has been observed in both light and heavy fuels. **Anticipate increased spread rates, spotting, and active nighttime burning.**
- The combination of persistent drought and record-low rainfall and snowpack amounts has led to very low live and dead fuel moistures. Low 1000-hour fuel moistures have been evidenced by complete consumption of dead fuels on recent fires. Live fuel moistures in grasses, shrubs and trees, have already reached critical levels in many areas of Northern California due to limited green-up this spring. **Expect fires to ignite easier and spread faster. Do not expect fires to exhibit reduced fire behavior when entering areas of live fuels; anticipate increased spread rates and spotting.**
- Direct attack is often not feasible under regular diurnal wind conditions with ground resources. And aviation utilization is often insufficient in moderating rate of spread without immediate heavy ground resource response. **Anticipate higher resistance to control in all fuel types.**
- Already this year, Northern California has experienced large fire activity and multiple team deployments. California will likely experience an extended fire season. It is important to be mindful of and manage fatigue for all resources. **Everyone, every day, returns home safely.**

Mitigation Measures:

- Local and inbound fire personnel need to be aware that fire behavior across the state is exceeding normal expectations for this time of the year. **Local briefings need to be thorough and highlight specific fire environment conditions. These include but are not limited to local weather forecasts, Pocket Cards, ERC's, live and dead fuel moistures.**
- Suppression actions need to be based on good anchor points, escape routes, and safety zones. **Remember LCES. Experienced lookouts are essential under these conditions.**
- Base all actions on current and expected behavior of the fire. **Augment initial attack resources as incident activity dictates.**

Area of Concern: Northern California except for the following Predictive Service Areas: North Coast and Bay Marine, west of Highway 101 in Mid-Coast to Mendocino and Diablo-Santa Cruz, and the north eastern portion of Far Eastside.

Monument Fire – Safety Message

DATE:8/10-8/11/21 TIME:0700-0700 Day/Night

Major Hazards and Risks:

- Steep areas with great potential for rolling rocks, trees, etc.
- Narrow, winding roads with limited visibility due to smoke.
- Winds increasing or changing directions.
- Continued high temperatures and low humidity.
- Spot and slop fire could easily become explosive!!!

AND CONTINUE TO HYDRATE!!! HYDRATE!!! HYDRATE!!!!

Safety Around Heavy Equipment Operations

- Never assume that the operator can see you, especially at night.
- Ensure that communications are established with the operator.
- Use hand signals if other communications are unavailable.
- Maintain a 50' to 100' exclusion area around equipment.
- Use a spotter when backing.
- Beware of flying objects from masticators.

Air Operations

- Follow aviation watch out situations on page 46 of the IRPG.
- Don't plan on air resources for medical transport or resupply.
- Refer to page 58 of the IRPG for properly directing bucket drops.
- Ensure positive communications with all air resources.
- Look for flying objects and debris from nearby retardant and water drops.
- Be sure to always monitor the air to ground frequency so that you are not caught off guard.

Safety zones and escape routes... know where they are *before* you need them!!

Signs of Stress

Some signs of stress include anxiety, increased heart rate, increased muscle tone, digestive complaints, inability to sleep well, headaches and increased irritability.

Coping with Stress

1. Track your stressors- Identify which situations create the most stress and how you respond to them. Did you raise your voice? Did you talk to someone about it? Did you take a walk?
2. Develop healthy responses- Instead of attempting to fight the stress, do your best to make healthy choices when you feel the tension rise.
3. Learn how to relax- Techniques such as meditation, breathing exercises, and mindfulness can help melt away stress. You can start by going for a walk in high stressful situations or doing a simple deep breathing exercise while walking to get your next meal. Learn to relax and joke with your team (workplace appropriate), laughter is one of the biggest coping mechanisms to relieve stress.
4. Recharge- When available take the time to recharge and avoid the chronic stress and burnout. During your off time, take the time to unwind so when your next shift comes up, you can come back able to perform your best.
5. Talk to your supervisor- Employee health is a major contribution to the success of the workplace. Start by having a conversation with your supervisor, the purpose of this is not to lay out all of your complaints, but rather to come up with an effective plan to manage the stressors you have identified, so you can perform at your best while on the job.

Media Access Law

Media – the California State Penal Code 409.5(D) allows for media to enter scenes of disaster, riot or civil disturbance. Properly identified members of the news media should not be restricted from entering locations specific within the penal code. However, this does not include crime scenes, private property and the new media may not interfere with incident operations. Please always treat the media with courtesy and respect and advise the public information office if there are any issues.

Photographs and videos of the incident – Please refrain from posting incident related videos to your social media. It may be unsafe to shoot photos or video and a firefighter who is concentrating on a camera may lose their situational awareness. When this happens, it could reflect poorly on all that are assigned to the incident.
