To: All Incident Personnel, Monument Fire

As Southern Area National Type I Incident Commander, I am committed to a policy of “zero tolerance” of inappropriate behavior during incident operations. Any form of harassment, discriminatory practices, or disrespectful behavior will not be tolerated. Known or reported acts will be dealt with appropriately.

I am particularly concerned about the perception that alcohol has a place in any of the Incident facilities. It is not appropriate to indulge in alcoholic beverages during any fire assignment.

The National Team from the Southern Region has a policy of “NO ALCOHOL” from the time of dispatch until the time of physical release from the Incident. Members of the Team voluntarily comply with this policy; all incident personnel will be expected to do so also.

We endorse, support, and expect an attitude of mutual respect for all Incident personnel and the public we serve. We also, endorse the attitude and work ethic that places “Safety First, every time on every Incident.” We expect nothing less.

/s/Mike Dueitt

FIRE BEHAVIOR:

GENERAL: Minimal fire behavior and activity is expected today. As the warming and drying trend continues fuels are becoming more available to burn. Smoldering and consumption of heavy fuels, logs and stumps expected. **There is potential for reburn in areas with heavy needle cast.**

Current Fire Environment Conditions:

Fine Dead Fuel Moisture = 3%, 1,000 Hour Fuel Moisture = 11%, Live Shrub Moisture = 82%
 ERC's are around average, below critical levels.

Fire behavior based on maximum values for the fuel models shown, exposed fuels on steep slope.

| Fuel Model | Rate of Spread | Flame Length |
|-------------|----------------|--------------|
| Grass/Shrub | 7 Chains/Hour | 4 Feet |
| Timber | 1 Chain/Hour | 1 foot |

Spotting from ridge top torching trees up to **0.1 mile**. Probability of Ignition = **86%**
 In **one hour**, new spot fires or ignitions can reach **4 acres**.

Specific Areas of Concern:

Division L – Creeping and smoldering persists across the division. Stumps and logs will continue to consume. Potential for roll out in areas of steep slopes.

Division W/Y/Z – Interior pockets will continue to burn together. Heavy fuels continue to hold heat and burn.

Division I – Mostly creeping and smoldering fire. Heavy fuels will continue to burn out.

AIR OPERATIONS: Generally good visibility.

SAFETY:

How frequent are your patrols of the fire line?

Spot fire growth is not linear. Doubling the time for detection, more than doubles the size of the spot fire. This shows the need for frequent patrols. Early detection of spot fires makes control much easier.

Based on today's predicted fire behavior.

Medical Incident (8-Line) IC Work Flow:

- Take charge of the scene – inform the Division Supervisor and Communications that you are the IWI IC and establish radio communications (frequencies, channels). Identify the emergency name – Division A Medical, etc.
- Assign or begin patient assessment using Medical Incident Report (8-Line) and first aid. Request additional medical resources on division/branch or across incident. Transmit Medical Incident Report patient information to Communications.
- Determine patient transportation through consultation with line medical personnel and Medical Unit Leader. Consider transportation time, risk to personnel, destination facility and available operational resources. If air transport is chosen, implement the plan for alternative transportation in the event aircraft cannot complete the mission. Order transportation resources through Communications as early as possible.
- Notify Communications as resources arrive and any patient status changes. Names of injured or deceased individuals will not be transmitted on the radio.
- Initiate documentation for future investigation; if a line safety officer is available, assign them to lead documentation. Do not move deceased individuals, gear, or personal effects except to accomplish rescue work or protect the safety of others. Obtain written documentation of witnesses. The Unit Log, ICS 214, may be used for the initial documentation, but a subsequent narrative will be required.
- As appropriate, conduct an After-Action Review to determine successes, areas to improve and lessons learned.

Major Hazards and Risks: Situational Awareness, Hazard Trees, Medical Emergencies

Maintain Your Situational Awareness

The safety of all personnel remains the most important issue on this incident. This includes weakened green trees that have compromised root systems, weakened by the fire. Minimize your exposure around hazard trees at all times. Take a moment for safety and have a conversation with your resources concerning weakened and hazardous trees.

Medical Emergencies
