FIRE BEHAVIOR:

GENERAL: **Fuels and Fire Behavior Advisory issued 07-17-2021**

Topography is steep and rugged ranging from 2000' in the valleys and 6000' on higher peaks. Slope in many instances is 100%. This terrain promotes fire growth through roll out and slope reversal. Many of the drainages align with predominant wind patterns for the region. The Trinity River corridor is a major drainage that funnels wind primarily East and West. There are major bends in the river that will create eddy's and swirling winds.

Fuels in the fire area range from timber and timber understory in higher elevations, heavy brush in mid elevations and grass oak woodland in valley bottoms. Extreme Drought this year has stressed fuels to critical fuel moistures. 1000 hr fuels recorded July 15 were 7%, LFM in brush was 93%. The dryness of the fuels in the area are a major contributor to the Monument Fire's growth.

Fires in this area commonly have large growth periods of 1 to 2 days usually aided by windy conditions. Following the large growth periods there are usually several days of slowed growth due to heavy smoke inversions. This has been the scenario for the Monument Fire. August is generally hot and dry with long burn periods that extend well into the night.

SPECIFIC:

Branch 20

Smoldering fire interior of the line. Monitor for roll out. Big wind test in the fire area this afternoon.

Branch 30

In NN and RR the firing operations from last shift will continue to back into the drainages. Light understory burning could provide an opportunity for upslope runs towards control lines if the fire manages to get into large jackpots of fuel. Light downslope winds overnight will need to be monitored in the Car Creek Drainage as winds will blow over the southern control line. In the West portion of RR, fire will continue to challenge the line in the afternoon with battling and then Westerly winds.

South Zone Contingency

Be cautious operating equipment in critically dry fuels.

AIR OPERATION:

Much less smoke over the fire today.

SAFETY

Wind is the most variable of all fire environment features. In Northern California there are 3 types of wind events that can be critical to fire behavior. The event that we will be influenced by today is sometimes referred to as "gap winds" or "thermal low" winds. This type of wind occurs when there is a sizeable temperature difference between the Sacramento Valley and the West coast. As hot air in the valley rises, it is replaced by air from the coast. The difference in temperature and the speed of lifting in the Sacramento valley influences the speed of this wind event which can present as West, Northwest or even North winds. This wind event also loves to find gaps in the coastal range to spill through as it heads for the Valley floor. If you are working in an aligned drainage, be sure to monitor for increasing winds and changing conditions.

MEDIA – The California State Penal Code Section 409.5(d) allows the news media to enter scenes of disaster, riot or civil disturbance. Properly identified members of the news media should not be restricted from entering locations specified within the code. However, this does not include crime scenes, private property and does not imply that the news media may interfere with incident operations while they are in the areas of concern. More information can be found [here](#).

CAL FIRE SOCIAL MEDIA POLICY – When assigned to a CAL FIRE incident, you will adhere to the CAL FIRE Social Media Policy, Section 0691. You can find further information about the CAL FIRE Social Media Policy [here](#).

PHOTOGRAPHS AND VIDEOS OF INCIDENT – We are in a new era of media. Media no longer means news/broadcast industry, but now refers to anyone that has the capability to shoot video, photographs and post them onto social media sites in a matter of minutes. Unfortunately, we have seen some instances of photographs or videos that have depicted unsafe, unprofessional or embarrassing circumstances which are a serious breach of ethics. When this happens, it reflects poorly on all that are attached to this incident. Posting an inappropriate video, photo or blog comment could expose oneself to unwanted ramifications. It may be unsafe to shoot photos or video and a firefighter who is concentrating on a camera loses their situational awareness.

The Public Information Office would like copies of the video and pictures that you safely took while not in an emergency situation, fire suppression activity or in an overhead assignment. Bring your video and pictures to the Public Information trailer; they will be reviewed and possibly uploaded to our many CAL FIRE social media sites. Remember, we don't want photographs or videos that depict unsafe, unprofessional or embarrassing circumstances, which are a serious breach of ethics.

LOST AND FOUND – The Information Section will manage lost and found items for the incident.

MAIL SERVICE – The Information Section can assist you with sending and receiving mail.
