# FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 15	TYPE OF FIRE: Wildland Fire
FIRE NAME: Monument	OPERATIONAL PERIOD: 24hr 09-01-2021
DATE ISSUED: 08-31-2021	TIME ISSUED: 2100
UNIT: SHU	SIGNED:  Troy Velin - FBAN

## INPUTS

### WEATHER SUMMARY

Light Easterly and then West today.  
See Incident Weather Forecast in IAP

### FIRE BEHAVIOR:

**GENERAL:** *\*Fuels and Fire Behavior Advisory issued 07-17-2021\**

Topography is steep and rugged ranging from 2000' in the valleys and 6000' on higher peaks. Slope in many instances is 100%. This terrain promotes fire growth through roll out and slope reversal. Many of the drainages align with predominant wind patterns for the region. The Trinity River corridor is a major drainage that funnels wind primarily East and West. There are major bends in the river that will create eddy's and swirling winds.

Fuels in the fire area range from timber and timber understory in higher elevations, heavy brush in mid elevations and grass oak woodland in valley bottoms. Extreme Drought this year has stressed fuels to critical fuel moistures. 1000 hr fuels recorded July 15 were 7%, LFM in brush is now at 80%. The dryness of the fuels in the area are a major contributor to the Monument Fire's growth.

Fires in this area commonly have large growth periods of 1 to 2 days usually aided by windy conditions. Following the large growth periods there are usually several days of slowed growth due to heavy smoke inversions. This has been the scenario for the Monument Fire. September is generally hot and dry during the day and we begin to see more temperate overnight conditions.

### SPECIFIC:

#### Branch 20

Smoldering fire interior of the line. Monitor for roll out.

#### Branch 30

**DIV NN** – Minimal fire behavior under smoke inversion. Monitor Little Barker Creek for fire in the bottom to move up through the drainage with normal upslope winds. Fuels are light within the drainage, but movement is still possible.

**DIV RR** – It will be much different in the Little Creek drainage today. A return of East-Northeast winds will return to the area this morning. This puts the bottom half of the drainage in a downslope alignment with the general wind. This means winds parallel with the control line and fire from the upper portion of the drainage will move downslope and fill in the bottom of the creek drainage. Spots on the lee side of the ridge in Sections 32 and 33 may be sheltered except for the upper regions close to the ridge. Monitor the opening of the drainage at Hyampom road. This will be a likely area for spots across the road. By mid to late afternoon upcanyon West-Northwest winds will prevail, this will be a 180-degree wind shift in the prime burn hours.

#### South Zone Contingency

Be cautious operating equipment in critically dry fuels.

### AIR OPERATION:

Smoke is expected to be over most of the fire area today. Best chance for clearing is DIV RR

### SAFETY

Wind increases or changes direction... Easterly flow returns to the fire area today after several days without it. Monitor for spots and heat in places that have been relatively quiet. DIV RR is a funnel for winds

# Fuels and Fire Behavior Advisory

## Northern California

July 17, 2021

**Subject:** Potential for extreme fire behavior due to critically low live and dead fuel moistures, very dry conditions resulting from persistent drought, minimal snowpack and spring precipitation, and elevated fire danger rating values across much of northern California.

**Discussion:** Fires burning in northern California are exhibiting extreme fire growth based on critical fuel conditions. Fire spread is fuel driven and does not depend on wind to spread. Surface fuels are very receptive to embers. Long range spotting, area ignition, and group torching is occurring on large fires frequently.

**Difference from normal conditions:** Northern California is in a drought; currently with 90% at Extreme to Exceptional levels. The drought is expected to persist or intensify throughout the fire season. Deficient rainfall and snowpack with early melt off has resulted in fuels that are 4-6 weeks ahead of normal drying/curing rates.

### Concerns to Firefighters and the Public:

- Energy Release Component (ERC) at numerous weather stations set record maximums already this year and are running at or above the 97<sup>th</sup> percentile in most cases. Expect increased fire intensity and spread rates in these areas. Early season extreme fire behavior has been observed in both light and heavy fuels. **Anticipate increased spread rates, spotting, and active nighttime burning.**
- The combination of persistent drought and record-low rainfall and snowpack amounts has led to very low live and dead fuel moistures. Low 1000-hour fuel moistures have been evidenced by complete consumption of dead fuels on recent fires. Live fuel moistures in grasses, shrubs and trees, have already reached critical levels in many areas of Northern California due to limited green-up this spring. **Expect fires to ignite easier and spread faster. Do not expect fires to exhibit reduced fire behavior when entering areas of live fuels; anticipate increased spread rates and spotting.**
- Direct attack is often not feasible under regular diurnal wind conditions with ground resources. And aviation utilization is often insufficient in moderating rate of spread without immediate heavy ground resource response. **Anticipate higher resistance to control in all fuel types.**
- Already this year, Northern California has experienced large fire activity and multiple team deployments. California will likely experience an extended fire season. It is important to be mindful of and manage fatigue for all resources. **Everyone, every day, returns home safely.**

### Mitigation Measures:

- Local and inbound fire personnel need to be aware that fire behavior across the state is exceeding normal expectations for this time of the year. **Local briefings need to be thorough and highlight specific fire environment conditions. These include but are not limited to local weather forecasts, Pocket Cards, ERC's, live and dead fuel moistures.**
- Suppression actions need to be based on good anchor points, escape routes, and safety zones. **Remember LCES. Experienced lookouts are essential under these conditions.**
- Base all actions on current and expected behavior of the fire. **Augment initial attack resources as incident activity dictates.**

**Area of Concern:** Northern California except for the following Predictive Service Areas: North Coast and Bay Marine, west of Highway 101 in Mid-Coast to Mendocino and Diablo-Santa Cruz, and the north eastern portion of Far Eastside.

**MEDIA** – The California State Penal Code Section 409.5(d) allows the news media to enter scenes of disaster, riot or civil disturbance. Properly identified members of the news media should not be restricted from entering locations specified within the code. However, this does not include crime scenes, private property and does not imply that the news media may interfere with incident operations while they are in the areas of concern. More information can be found [here](#).

**CAL FIRE SOCIAL MEDIA POLICY** – When assigned to a CAL FIRE incident, you will adhere to the CAL FIRE Social Media Policy, Section 0691. You can find further information about the CAL FIRE Social Media Policy [here](#).

**PHOTOGRAPHS AND VIDEOS OF INCIDENT** – We are in a new era of media. Media no longer means news/broadcast industry, but now refers to anyone that has the capability to shoot video, photographs and post them onto social media sites in a matter of minutes. Unfortunately, we have seen some instances of photographs or videos that have depicted unsafe, unprofessional or embarrassing circumstances which are a serious breach of ethics. When this happens, it reflects poorly on all that are attached to this incident. Posting an inappropriate video, photo or blog comment could expose oneself to unwanted ramifications. It may be unsafe to shoot photos or video and a firefighter who is concentrating on a camera loses their situational awareness.

The Public Information Office would like copies of the video and pictures that you safely took while not in an emergency situation, fire suppression activity or in an overhead assignment. Bring your video and pictures to the Public Information trailer; they will be reviewed and possibly uploaded to our many CAL FIRE social media sites. Remember, we don't want photographs or videos that depict unsafe, unprofessional or embarrassing circumstances, which are a serious breach of ethics.

**LOST AND FOUND** – The Information Section will manage lost and found items for the incident.

**MAIL SERVICE** – The Information Section can assist you with sending and receiving mail.
