FIRE BEHAVIOR

GENERAL: *Any slopover or spot fires will burn very actively with Haines Index = 5*****

ERC is 69 (Mt. Shasta RAWs #40217)

SPECIFIC FIRE BEHAVIOR:

Be aware of interior islands that might burn causing torching and spotting outside control lines. If current lines hold, the following fire behavior would be for a spot fire or other slopover. Isolated and short duration crown fire runs in mixed conifer and shrub understory remain possible. Potential *daytime maximum headfire behavior* (reduce these numbers by approximately 1/2 for flanking fire and 3/4 for backing fire):

- Shrub: 8 - 30' flame lengths, 14 - 150 chs/hr rate of spread
- Mixed Conifer: 3 - 10' flame lengths, 6 - 35 chs/hr rate of spread
- Torching/short duration timber crownfire: 100 - 150' flame lengths, 90 chs/hr rate of spread
- Spotting distance up to 3/4 mile spotting distances with 70-92% probability of ignition

DIV's P/R/T/Z: Direct dozer and handlines continue to hold w/ additional mop-up. Escapes could spread toward Weed, Carrick and Lake Shastina.

DIV's A/E: Direct handlines tied into improved road system are holding. Interior islands burning out could threaten containment lines.

DIV N: Some heat remaining in the rocks near Diller Canyon generating interior smokes with a low likelihood of escape. Escape could threaten Mt. Shasta City.

AIR OPERATIONS

- Sunset 07/05 @ 2046 hours, Sunrise 7/06 @ 0543 hours. Smoke inversion likely setting in after midnight.

SAFETY MESSAGE

Fire fighter safety comes first on every fire, every time

**Major Hazards and Risks:**

- ❖ **Driving Soft Roads:** Visibility is compromised by dust, especially in the morning hours and sunset, so slow down. Roads on the incident are getting in poor condition, so make sure you have an alternative road. If your vehicle gets stuck have a plan before you start to get pulled out. Stay clear of cables and chains in case there is a failure on equipment extrication.
- ❖ **Avoid Backing Accidents:** Watch your side clearance on both sides and then back out slowly. Use a spotter whenever available. Exit vehicle and check clearance when necessary.
- ❖ **Hydration** - Is becoming critical with higher temps and lowering relative humidity. Be alert to heat stress in yourself and others. Pay attention to your coworkers, as you can identify the signs and symptoms in others before they can. Drink fluids.
- ❖ **Mop-Up:** Crews working mop up watch for burning stump holes and rolling material on steep terrain. Scout area for fire weakened trees, flag off hazardous areas.

Hazardous Tree Indicators:

It's important to identify the hazardous trees in your work area before engaging.

- Strong winds
- Night Operations
- Steep Slopes
- Disease or bug-kill timber
- Trees and duff have been burning for an extended period
- High-risk tree species
- Numerous down trees
- Dead or broken tops and limbs overhead
- Accumulation of downed limbs
- Leaning or hung-up trees
- Look up, Look Down, Look Around

After identifying the hazard trees: look for hazard control measures to mitigate your risks. IRPG pgs.

Symptoms & Signs of Heat Illness

Heat Exhaustion: Victim will have cool, clammy skin; pale coloring; feel weak, dizzy and/or nauseous.

Treatment: Have individual sit in shade or cool area; administer fluids; loosen clothing and assure rest.

Heat Stroke: This is a medical emergency!!

Victim will hot, dry, red skin and possible convulsions. These symptoms can progress to unconsciousness and death! Treatment – Immediately cool individual's body by pouring water over them, especially the head and upper body. Contact the medical unit. Monitor the victim and provide whatever medical support necessary. Placing ice around the neck, groin and armpits can help speed the cool down process.

The convention calls for frequency lists to show four digits after the decimal place (five digits for 700 MHz frequencies). The letter "U", "N", or "W" in the deviation (Dev) column reflects whether the frequency is ultranarrow (6.25 kHz), narrow (12.5 kHz) or wide band (25 kHz). Mode refers to either "A" indicating Analog, "D" indicating Digital (e.g. Project 25) or "M" indicating Mixed Mode. All channels are shown as if programmed in a control station, mobile or portable radio. Repeaters (and depending on use, base stations) must be programmed with the Rx and Tx reversed.

ATTITUDE

Attitude is more important than facts.

It is more important than the past, than education, than money, than circumstances, than failures, than successes, than what other people think or say or do.

It is more important than appearance, giftedness or skill.

It will make or break a company...a church...a home.

The remarkable thing is we have choice every day regarding the attitude we will embrace for that day.

We cannot change the inevitable.

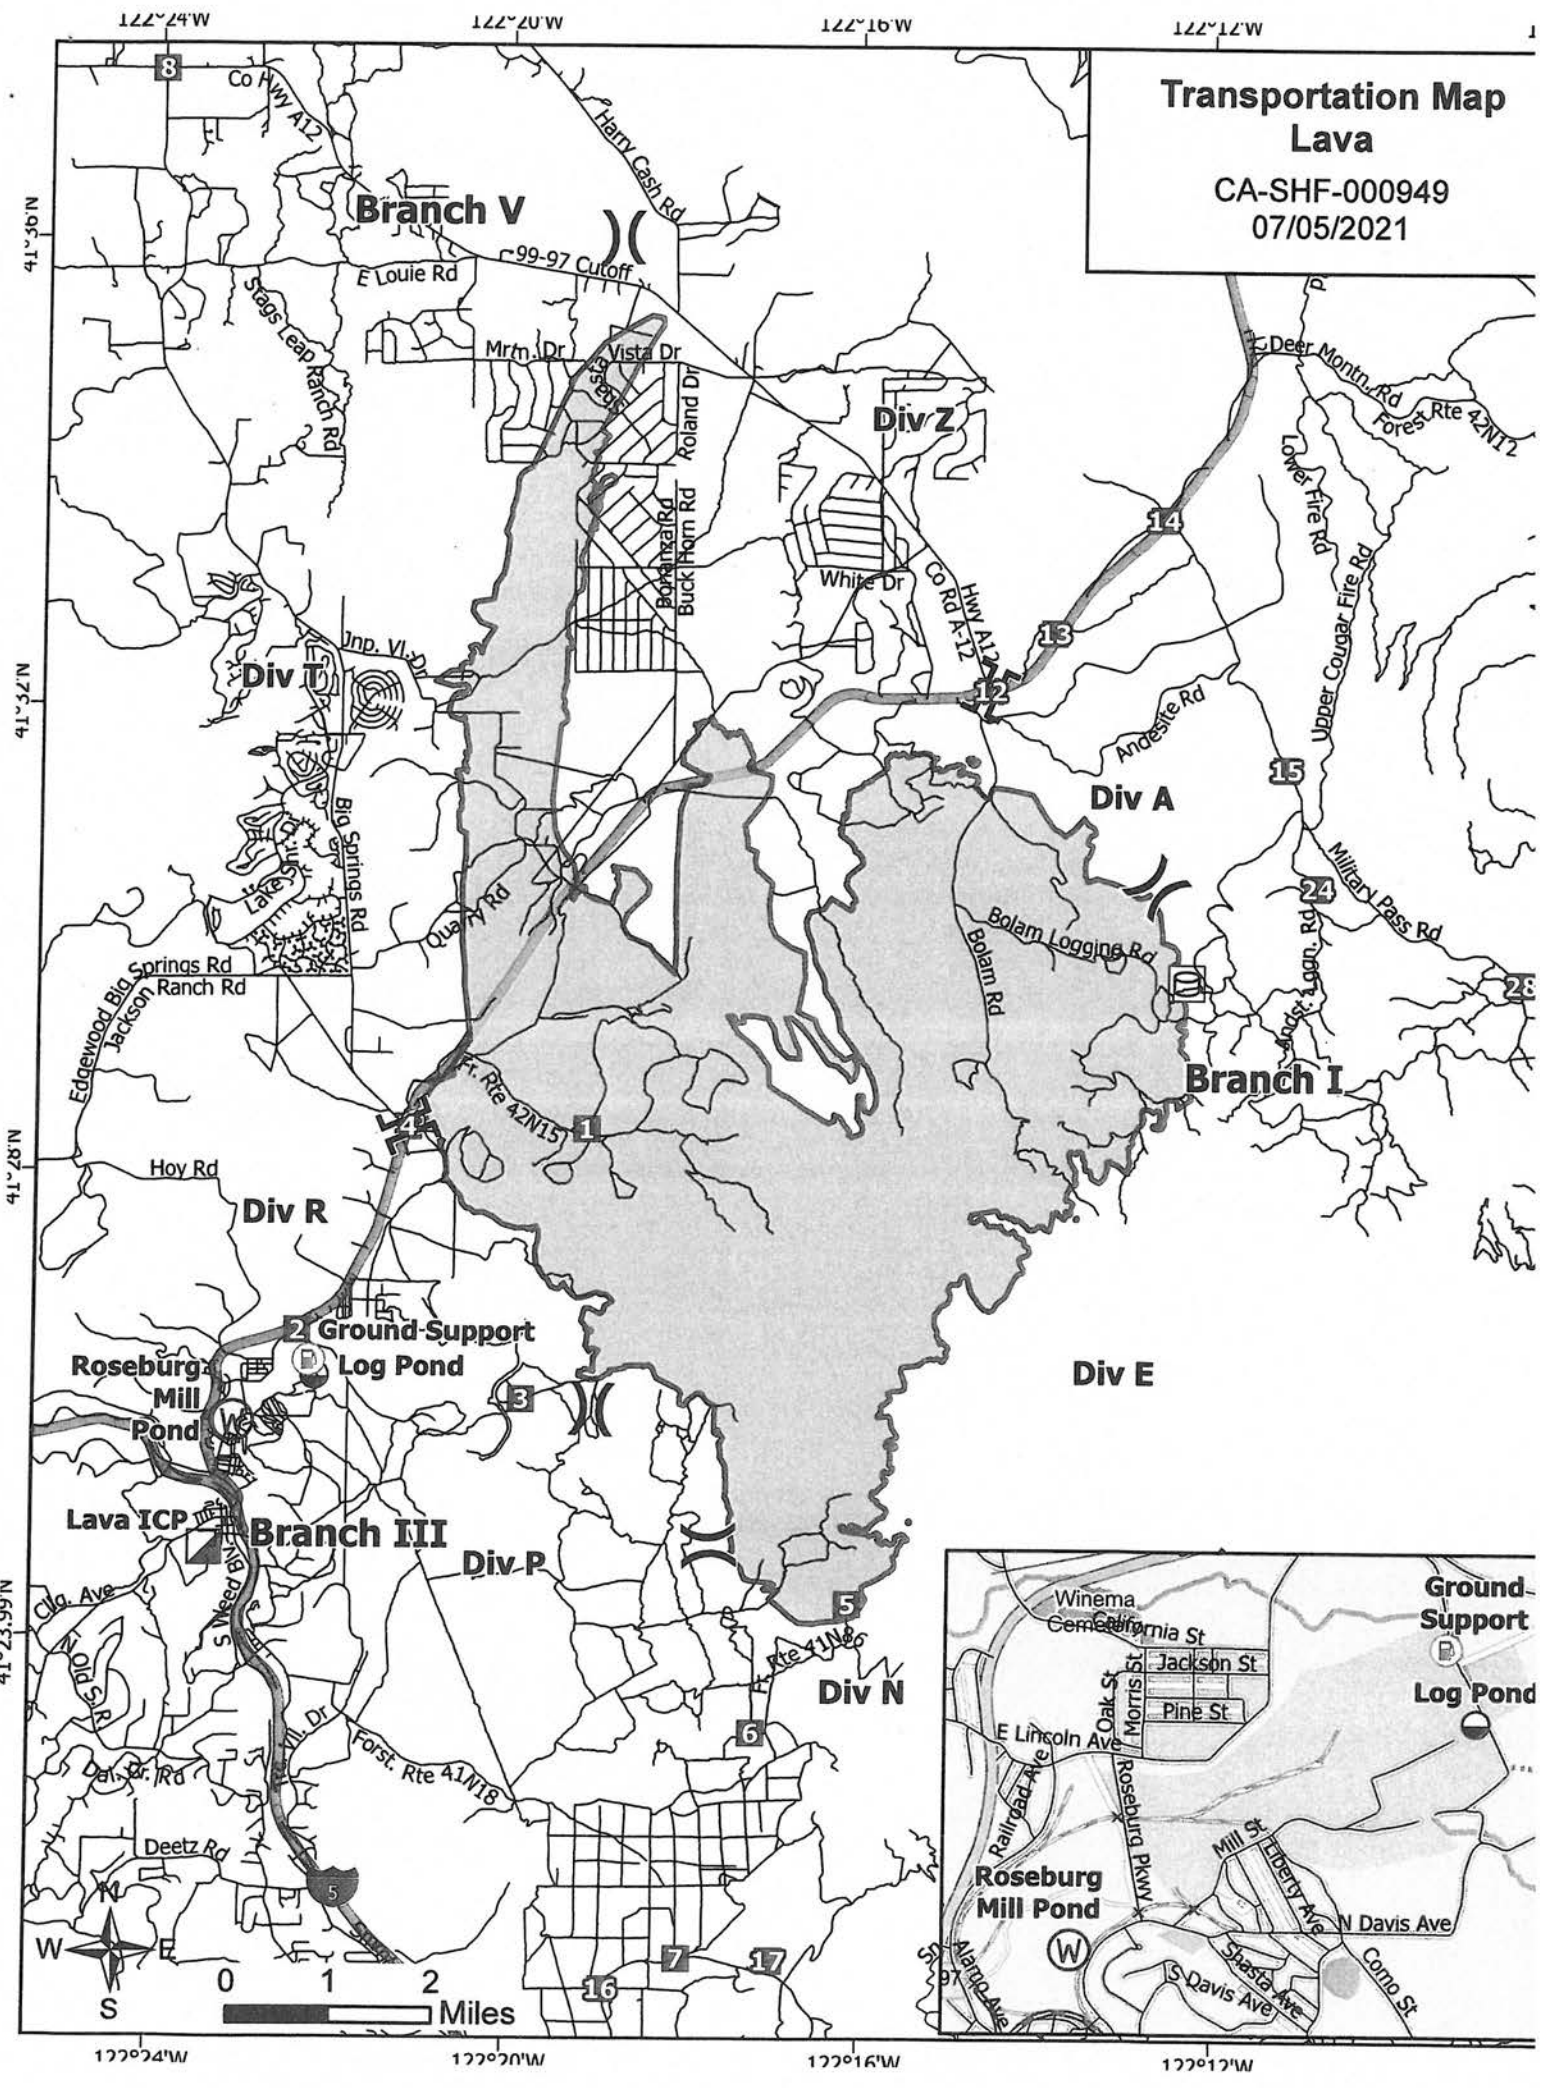

The only thing we can do is play on the one string we have, and that is our attitude.

**When you know who you are;
when your mission is clear and you
burn with the inner fire of unbreakable will;
no cold can touch your heart;
no deluge can dampen your purpose.
You know that you are alive.**
