FORECAST ISSUED: 1930 Tuesday July 6

******EXCESSIVE HEAT WATCH VALID FRIDAY THROUGH MONDAY******

WEATHER DISCUSSION: Very subtle changes in the weather today with hot and dry conditions continuing. Local light downslope (northerly) winds in the morning will become upslope in the afternoon. A general south wind will develop during the afternoon bringing breezy to gusty conditions, especially along the I-5/Sacramento River drainage. Not expecting much relief at night with mild overnight lows and moderate to poor humidity recovery. Confidence continues to increase that a HEAT WAVE will impact the region Friday through Monday.

WEATHER FORECAST FOR WEDNESDAY:

WEATHER: Smoke and haze.

TEMPERATURES: Highs 89-98.

HUMIDITY: 15-25%.

20 FT WINDS: Light drainage/northerly winds less than 5 mph in the morning becoming upslope/upcanyon or southerly in the afternoon 5-10 mph. Gusts up to 20 mph in the afternoon, especially aligned drainages and upper slopes/ridges.

STABILITY/INVERSION: Moderate stability in the morning with smoke in lower drainages. Inversion lifting/mixing late morning.

WEATHER FORECAST FOR WEDNESDAY NIGHT:

WEATHER: Smoke and haze.

TEMPERATURES: Lows 55-68.

HUMIDITY: 45-60%.

20 FT WINDS: Downslope or northerly winds becoming less than 5 mph. Gusts up to 10 mph.

STABILITY/INVERSION: Becoming more stable overnight with smoke settling lower elevation and spilling southward toward Redding.

EXTENDED FORECAST: Hot and dry condition will continue this week. Highs 90s. 15-25% RH. Triple digit heat will return late in the week.

FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 5	TYPE OF FIRE: Wildfire
FIRE NAME: SALT	OPERATIONAL PERIOD: July 7, 2021 24hr
DATE ISSUED: 7/6/21	TIME ISSUED: 2000
UNIT: CA-SHF	SIGNED:  Typed/printed: Dennis Burns/s/ Dave Duran (T)

INPUTS

WEATHER SUMMARY: Continued Hot, Dry and Smoky

Temps: Day 91-98 Night 55-68

RH: Day 15-25% Night 45-60%

Winds: Day Ridges SW 5-10 gusts to 15mph Night Variable up to 5mph Nighttime transport winds NE to 4mph after 2400.

OUTPUTS

FIRE BEHAVIOR

GENERAL: No major forward progression expected. Expect active backing fire and flanking runs with short duration intense head fire runs as the main fire backs into drainage bottoms and aligns with slopes. Fire whirls are probable at intersecting drainages and when the winds transition from upslope to down slope. Make sure lookouts have a good view of the fire. If the sky begins to clear, expect fire activity to increase around 1200hrs.

At night, expect the fire to remain active until about 0200hrs.

With the dry fuels, spotting will be problematic. Spotting will be short range and from rollout. If the fire develops a large plume, spotting could increase to 1 mile. 1000hr fuels are at 7%FM and are receptive to spots

Probability of Ignition will be 90%

Expect isolated flare-ups and sustained short duration head fire runs where slope and winds align.

SPECIFIC:

Branch I: No forward fire progression is expected on Div A. Div M. The fire has crossed the lower N17 Rd. where the fuels become sparse. Expect rapid rates of spread in grass fuels aligned with slope. The heavy dead and down pockets of fuels will hold heat for long periods and produce intense heat. Timber harvest activity has created areas of reduced fuel loading in the area of the Eye Creek and Middle Salt Creek area reducing the probability of sustained runs. With the intersecting drainages, expect winds to be inconsistent as to direction. When the smoke lifts, the fire will become active sometime around 1200hrs.

Branch IV: No forward fire progression is expected. Mop-up will be extensive in areas where heavy fuels continue to burn out. Snags will continue to be a safety hazard.

IA: Any starts along the I-5 corridor will exhibit problematic fire behavior. This means rapid rates of spread, torching and spotting. Fixed wing aircraft may not be effective in areas with a tight timber canopy.

AIR OPERATIONS: Smoke will limit air operations until the inversion mixes out around 1100-1200hrs.

SAFETY

- Spotting has been a primary driver of this fire, make sure Lookouts are posted in places where they can see potential spotting.
- Burning Snags have come down across the 34N17 road in multiple places expect this to continue.
- Unburned pockets of fuel in the previous burn scars have been observed causing flare ups.
- There is a strong potential for reburn as there is continuous brush fields where the canopy is intact with heavier fuels burning under it.

Symptoms & Signs of Heat Illness

Heat Exhaustion: Victim will have cool, clammy skin; pale coloring; feel weak, dizzy and/or nauseous.

Treatment – Have individual sit in shade or cool area; administer fluids; loosen clothing and assure rest.

Heat Stroke: *This is a life-threatening medical emergency!!*

Victim will have hot, dry, red skin and possible convulsions. These symptoms can progress to unconsciousness and death!

Treatment – Initiate emergency medical procedures outlined in incident Med Plan. Immediately cool individual’s body by pouring water over them, especially the head and upper body. Monitor the victim and provide whatever medical support necessary. Placing ice around the neck, groin and armpits can help speed the cool down.
