### Snag Hazard Data

Hazard Rating

<span style="color: blue;">■</span> Guarded	<span style="color: yellow;">■</span> Moderate	<span style="color: orange;">■</span> High	<span style="color: red;">■</span> Extreme
---	--	--	--

Snag Hazard Data Limitations  
The Snag Hazard map is intended to show areas of relative hazard from dead, standing trees. The map is compiled from the National Treelist dataset (Riley et al 2016). This dataset was created for use in large scale modeling and has not been field verified.
