Estimated Ground Evac Data Limitations
 This dataset is to be used in planning and implementation phases of an active wildfire. This dataset is meant to quantify what many practitioners know qualitatively about the remoteness of many of the lands we manage. Our highest priority is to manage for the safety of the public and our firefighters. This dataset can help ensure that we have taken the proper steps to ensure a timely response should a serious accident occur. These data are an estimate of the ground transport time to a fixed set of hospitals and should not be used for real-time route finding or specific evacuation routes.

- Estimated Ground Evacuation Time**
- 1 to 2 Hours
 - 2 to 4 Hours
 - 4 to 6 Hours
 - More than 6 Hours
 - Fire perimeter
- Fire Edge
 - Contained Line
 - Paved Road
 - Gravel Road
 - Dirt Roads
 - Unimproved Roads

- Closed Roads
- Trail
- Incident Command Post
- Camp
