OUTPUTS

FIRE BEHAVIOR

Fuel Model	Rate of Spread	Flame Length	Spotting Distance	Probability of Igntn.
Timber Understory	18 chains per hr	10'	.35	90%

GENERAL: All the fuel in the area is extremely dry and receptive to ignition. Current ERCs are above the 97th percentile, 100 and 1000 hr. are below 4th percentile. Local live fuel moisture are above critical levels, but brush fields still maintain an abundant amount of dead due to the prolonged drought. The Fire is burning in an area that has no recent recorded fire behavior. Heavy fuels and fire weakened trees will continue to smolder and be a source of deep-seated heat, very hot ash pits and stumps holes will be throughout the fire area. Expect tree release of fire weakened timber throughout the incident to continue to spread into steep drainages and across roadways.

SPECIFIC:

- Drought stricken materials is the main contributor to fire spread. This material is a very receptive fuel bed for embers cast to start new spot fires.
- Likelihood of group torching with crown propagation.
- Spot fires will be hidden from view due to dense stands and limited road systems. Use caution where there is one spot there are probably many more in the area
- Multiple drainages containing heavy fuels are in alignment with the winds (and/or down drafts) and topography and will produce moderate to high rates of spread.

Night Operations: Potential for large growth due to extremely dry fuel loads. Fire is actively spotting and probability of ignition at 100% in receptive fuel beds

AIR OPERATIONS:

Air Operations: Smoke will fill low-lying areas throughout the early hours – Expect erratic winds across all ridgetops throughout the drainages

Mixing height: 200-1000 ft AGL increasing to 5500 ft AGL late in the morning, then increasing to 12500 ft AGL early in the afternoon.

Transport winds: South to southwest around 5 mph becoming south 10-15 mph

Sunrise: 0611 Sunset: 2019

SAFETY

- Dramatic wind shift occurred yesterday around 5pm. Know where your escape route and safety zones are and have an alternate route if possible.
- Aircraft may not be available due to visibility. Have an additional plan that does not depend on aircraft.
- Be alert, Keep calm. Think clearly. Act decisively.

Planning for Medical Emergencies

Ask and be able to answer these 3 questions

- 1. What are we going to do if someone gets hurt?
- 2. How will we get them out of here?
- 3. How long will it take to get them to a hospital?

All operational activities should be based on answers to these questions. See page 2 of the IRPG for more information.
