### FIRE BEHAVIOR FORECAST

FORECAST NUMBER: 14 TYPE OF FIRE: Wildfire

FIRE NAME: McKinney Fire OPERATIONAL PERIOD: August 14, 2022 24hr

DATE ISSUED: 8/13/22 TIME ISSUED: 2000

UNIT: CA-KNF SIGNED: \_\_Dennis Burns and John Kern

### **INPUTS**

WEATHER SUMMARY: Still Warm and Dry with NW Winds with Gusts to 20 mph

Temps: Day Valley 94-98; Day Ridges 80-85

Night Valley 52-57; Night Ridges 57-62 Night Valley 48-58%; Night Ridges 28-38%

RH: Day Valley 13-20% Day Ridges 20-25% Winds: Day Ridges W to NW 5-10 G 20-25 mph

Night Ridges Still strong WNW 10-15 G25 until 2400.

### **OUTPUTS**

### **FIRE BEHAVIOR**

### **GENERAL:**

Winds similar to yesterday, NW with gusts to 25 on ridges. Fuels are still very dry (ERC 90th percentile), and the terrain is very steep. Winds will be out of the west to northwest. Interior islands may still burn but should not threaten most control lines. Some interior areas have had needles and leaves scorched and are starting to fall creating a risk of reburn. Make sure lookouts have a good view of the fire.

Should an interior green island or dirty burn area challenge the line, or a new start get started, with these dry fuels, spotting will be problematic and should be short range (100-300 ft) for the most part and from rollout. There were numerous spot fires occurring during the IA of the George Fire the day before yesterday.

Expect single and group tree torching and sustained short duration crown runs where slope and winds align especially outside our current perimeter or new starts.

At night: Expect winds to continue to be strong until midnight. The fire may remain active most of the period as Relative Humidity will not recover that well on upper slopes.

### SPECIFIC:

**Branch V:** No forward fire progression is expected. Portions of Div. Y and Z have small areas of heat near the line several days ago but could still hold heat. Expect interior islands to burn out and there is a potential for reburn; either of which will challenge existing lines.

Branch X: No forward fire progression is expected. Rollout will continue to be problematic and challenge any established lines. The George Fire still has some heat on it and could pose a threat from smoldering snags or rollout.

Branch XX: No forward fire progression is expected. Winds will push fires downslope to the SE.

IA: With the state of the fuels, expect any new start to be resistant to control. For fire aligned with slope and wind, expect rapid rates of spread with the potential for <u>crown runs</u> where dense canopies are present.

Timber with shrubs TU5 (165)

Rate of Spread Flame Length
7-12 Ch/hr. 3-7 feet

Long-needle litter TL8 (188) 5-11 Ch/hr. 3-6 feet

Grass/Shrub GS2 (122) 18-26 Ch/hr. 3-7 feet

Shrub SH7 (147) 30-47 ch/hr 12-16 feet

Probability of Ignition 91%

Spotting distance from torching trees on ridgetop 0.3 miles

AIR OPERATIONS: Smoke may limit air operations in the early morning but will clear out by 1500.

### **SAFETY**

Crown fires can exhibit rapid rates of spread, great flame lengths and long-range spotting.

# COVID-19 PREVENTION INFORMATION MAINTAINING A HEALTHY WORKFORCE

from the COVID Advisor Team

All fire personnel are susceptible to contracting COVID-19. The health and well-being of all personnel must be a priority throughout the fire season. Mask use, social distancing, and good hygiene will support the health of fire personnel and are important ways to prevent the spread of COVID-19 and maintain the health of all fire personnel.

### Self-Awareness/ Daily Health Screening

Separate yourself from others and notify your supervisor if you experience COVID-19 related symptoms (fever or chills, cough – more than expected, shortness of breath or difficulty breathing, fatigue, muscle or body aches, headache, new loss of taste or smell, sore throat, congestion or runny nose, nausea or vomiting, diarrhea). Supervisors will use COVID precautions and facilitate COVID testing at the identified COVID testing locations.

### COVID-19 Testing availability - (2) locations

McKinney Base Camp (430 E. Prather St.) - Adventure Medics

Klamath River Spike Camp (28017 Hwy 96) - Mountain Medics.

Priorities for testing will be for those with COVID-related symptoms and potential exposures to COVID-positive individuals.

Federal employees enrolled in the Screening Testing Program can also access the identified testing location to meet their testing requirements. Screening Testing is required weekly for federal employees in the program when the Community Levels are Medium or High.

### Sanitary and Personal Hygiene Practices

Rigorous sanitary practices are important for reducing the transmission of infectious diseases. All personnel should cover their coughs and sneezes. Perform proper hand hygiene including handwashing or hand sanitizer use after touching potentially contaminated surfaces, removing face coverings, after using the restroom, and before eating or putting anything in their mouth.

### Social Distancing and Mask Wearing

Individuals should practice and remind others of social distancing of at least six feet apart. When social distancing is not possible, masks use is recommended. **Modules should limit close contact with other resources to insulate their module from potential exposures**.

Current Community Level for Siskiyou County is Medium so mask wearing is optional unless social distancing cannot be maintained. Community Levels are updated weekly by CDC.

### The Five-D System for Effective Fireline Waterbars

To make effective waterbars, use the 5-D System: Distance, Diagonal, Divert, Discharge, and Dissipate.

**Distance**: Waterbars must be placed the proper distance apart, based on slope. This keeps the area that accumulates runoff small enough to prevent damage. The table below gives the maximum distance between waterbars, or between a waterbar and the next upslope drainage break.

**Diagonal**: Don't bully the flow, lead it. Waterbars built directly across a fireline tend to fail. Waterbars built diagonal to the fireline lead the water off and work better. A simple rule is to build them at 30 degrees off perpendicular (see the illustration below).

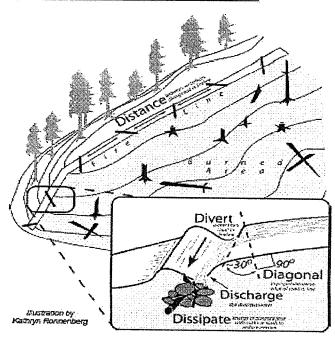

**Divert**: A good waterbar will divert the water off the fireline. To do this the waterbar must be deep enough to handle all the flow for as long as it's needed. Excavation is much better than fill in making a durable and effective waterbar (a ditch or a dip beats a dike).

**Discharge**: Another feature of a good waterbar is that it will discharge the flow. A good waterbar is not a dam, it must have an open outlet.

**Dissipate**: Finally, a good waterbar should dissipate the flow just below the outlet to exhaust its eroding power and cause it to filter into the soil. This may require placing slash, rock, or debris below the outlet.

Fireline slope	Maximum Distance Apart (feet)
1-6	300
7-9	200
10-14	,150
	90
	50
41-60	25

Recommended spacing for waterbars on firelines. Waterbars should be no further apart than this, but they may be closer. When in doubt, put in more. From: UDSA-Forest Service, "Sale Administrator's Handbook"

- At least 50% of material in the lower third of the piles shall be composed of small diameter material and attached fines to create a kindling core.
- All piles shall be covered with Kraft type wax paper (wax side up).
- Pile covering sheet shall be placed to cover the bottom 2/3 of the pile and cover 50% of the surface area of the pile at this level. The remaining 1/3 of the pile shall be placed over the cover sheeting anchoring all four corners and the middle of the cover sheeting securely.
- No piles shall be built on, or in contact with any tree stumps >10" diameter.

- In some units specific pile placement will be required to avoid damage to sensitive plant colonies, maps with exclusion areas will be included, the exclusion areas will be clearly marked and defined by the COR before work takes place. Any piles constructed in exlusion areas will be moved by the contractor.

#### FIRE SUPPRESSION REPAIR MESSAGE

Berms and push-piles should be spread to the extent feasible by back-blading with a tractor or with an excavator. Debris piled against standing timber should be pulled back while taking care not to damage growing stock with the tractor blade or an excavator bucket and thumb. At helispots, staging areas, and safety zones remove and/or breach berms so that runoff can be dissipated. Cross-drain these areas to effectively dissipate water as necessary.

Waterbreaks should be constructed at an approximately 45° angle at a minimum depth of 10″ from the bottom of the cut to the top of the berm. Where possible, the discharge from the waterbreaks should be directed into vegetated areas to minimize erosive forces. Where dozerline or handline has crossed a watercourse, the channel should be cleared of soil and debris to re-establish the channel. Waterbreaks on handlines should be installed every 50′ or closer as needed.

Waterbreak maximum spacing:	Grade	0-10%	11-25%	26-50%	>50%
	Spacing	0-200'	150'	100′	75′

Roads used in fire suppression activities should be left in at least as good a condition as they were found. Gravel and soil surface roads should be watered to prevent excessive dust formation. Where suppression activities have damaged or rendered road drainage facilities non-functional, waterbreaks or drivable drainage dips should be installed for drainage. Inside ditches damaged from suppression activities should be cleaned and left unobstructed.

If any archaeological resources are located during suppression repair activities, work will stop in that location and the Suppression Repair Lead will be notified.
