Danger Tree Abatement Plan

McKinney Fire

Klamath National Forest

Happy Camp/Oak Knoll Ranger District & Salmon-Scott River Ranger District

Fell danger trees in areas where suppression activities created hazard trees that would hit designated travel routes. Danger trees can be abated (felled) near designated features to provide for immediate firefighter and/or public safety. If after felling, downed trees pose a threat to firefighter and/or public safety, then remove and deck these trees in a location that does not pose a threat to firefighter and/or public safety. All work will be done only on National Forest System lands. Distances from the target feature are based on the following priorities:

Priority 1 Features

<u>Size Class</u>	<u>Size Class Definition</u>	<u>Baseline Slope Distance (feet above/flat/below road)*</u>	<u>Maximum Slope Distance (feet above/flat/below road)*</u>	<u>Minimum Slope Distance (feet above/flat/below road)*</u>
Small	Less than 14.0 inches stump diameter	100/100/75	200/200/150	75/75/50
Large	Greater than or equal to 14.0 inches stump diameter	200/150/150	250/250/200	125/125/75

*Distances shown above are approximately 1 ½ times the tree height from the target feature that is at risk above the road and on flat ground and one times the tree height below the road.

Priority 2 Features

<u>Size Class</u>	<u>Size Class Definition</u>	<u>Baseline Slope Distance (feet above/flat/below road)**</u>	<u>Maximum Slope Distance (feet above/flat/below road)**</u>	<u>Minimum Slope Distance (feet above/flat/below road)**</u>
Small	Less than 14.0 inches stump diameter	75/100/75	200/200/150	75/75/50
Large	Greater than or equal to 14.0 inches stump diameter	150/100/100	200/200/150	100/100/75

**Distances shown above are approximately one times the tree height above and below the Feature and in flat areas.

In addition, material meeting the following utilization and processing specifications will be skidded to, processed, and decked at pre-approved decking locations.

Utilization and Processing Specifications

Product and Species	Merchantable Tree		Minimum Piece Requirements	
	Minimum DBH (inches)	Number of Minimum Pieces Per Tree	Length (Feet)	Diameter Inside Bark Small End (inches)
ALL	10.0	1	10	8.0

Slash:

- a.) Slash will be (in order of preference): chipped, lopped and scattered, or piled in a manner that will not impact man-made structures including but not limited to water tanks, water lines, irrigation ditches, roads, road borrow ditches, and water diversion structures.
- b.) Material extending three (3) feet or more outside the edge of a pile will be trimmed.
- c.) An eight (8) foot slash bay will be cleared of all but fine material around each machine pile and
- d.) When needed, an appropriate fire line will be cleared to mineral soil around the outer ring of the slash bay.
- e.) When lopped and scattered, all branches must be cut from main stem when main stem exceeds three (3) inches in diameter
- f.) Slash or chips must be spread to a height of not more than one (1) foot. Tree stems will be bucked, as necessary, to meet this height requirement and to avoid "jack-strawing" trees on top of one another.
- g.) All piles will be reasonably compact and free of soil to facilitate burning and will be constructed of such size and at such distance from trees so that burning will not result in unnecessary damage to residual timber.

Stump Height:

Stumps will be cut to a height of not more than **12 inches** from the high side of the stump, unless approved in writing by the Agency Administrator Representative or their designee.

Incident: McKinney Incident	Date: September 14, 2022	Shift: Day

THINK-----SAFETY-----FIRST

Recognize Potential Hazards Ahead of Time!

Step Back
Think
Organize
Proceed

The cornerstone of safety is to take time to assess the job and its environment. In order to encourage this principle, please consider using the “STOP” acronym to act as a reminder to pursue all jobs in a safe manner

Crews are tired. Leg muscles and feet are sore. Take care of personal health conditions. Fire activity is slowing down and Danger Tree Abatement along with suppression repair activities may lead to complacent attitudes. Stay alert and remember these hazards:

- **Driving steep, winding mountain roads**

- **Dehydration**
- **Steep slopes and rolling material**
- **Hazard Trees**
- **Stump holes and hidden depressions**
- **Keep your head up and maintain your working distance**
- **Don't get in a hurry**
- **Be especially careful working and driving around heavy equipment**
